STORY ONE

THE EMPIRE OF THE ANTS

§ I

WHEN Captain Gerilleau received instructions to take his new gunboat, the *Benjamin Constant*, to Badama on the Batemo arm of the Guaramadema and there assist the inhabitants against a plague of ants, he suspected the authorities of mockery. His promotion had been romantic and irregular, the affections of a prominent Brazilian lady and the captain's liquid eyes had played a part in the process, and the *Diario* and *O Futuro* had been lamentably disrespectful in their comments. He felt he was to give further occasion for disrespect.

He was a Creole, his conceptions of etiquette and discipline were pure-blooded Portuguese, and it was only to Holroyd, the Lancashire engineer who had come over with the boat, and as an exercise in the use of English—his “th” sounds were very uncertain—that he opened his heart.

“It is in effect,” he said, “to make me absurd! What can a man do against ants? Dey come, dey go.”

“They say,” said Holroyd, “that these don’t go. That chap you said was a Sambo——”

“Zambo—it is a sort of mixture of blood.”

“Sambo. He said the people are going!”

The captain smoked fretfully for a time. “Dese tings ’ave to happen,” he said at last. “What is it? Plagues of ants and such-like as God wills. Dere was a plague in Trinidad—the little ants that carry leaves. Orl der orange-trees, all der mangoes! What does it matter? Sometimes ant armies come into your houses—fighting ants; a different sort. You go and they clean the house. Then you come back again;—the house is clean, like new! No cockroaches, no fleas, no jiggers in the floor.”

“That Sambo chap,” said Holroyd, “says these are a different sort of ant.”

The captain shrugged his shoulders, fumed, and gave his attention to a cigarette.

Afterwards he reopened the subject. “My dear ‘Olroyd, what am I to do about dese infernal ants?”

The captain reflected. “It is ridiculous,” he said. But in the afternoon he put on his full uniform and went ashore, and jars and boxes came back to the ship and subsequently he did. And Holroyd sat on deck in the evening coolness and smoked profoundly and marvelled at Brazil. They were six days up the Amazon, some hundreds of miles from the ocean, and east and west of him there was a horizon like the sea, and to the south nothing but a sand-bank island with some tufts of scrub.

The water was always running like a sluice, thick with dirt, animated with crocodiles and hovering birds, and fed by some inexhaustible source of tree trunks ; and the waste of it, the headlong waste of it, filled his soul. The town of Alemquer, with its meagre church, its thatched sheds for houses, its discoloured ruins of ampler days, seemed a little thing lost in this wilderness of Nature, a sixpence dropped on Sahara. He was a young man, this was his first sight of the tropics, he came straight from England, where Nature is hedged, ditched, and drained into the perfection of submission, and he had suddenly discovered the insignificance of man. For six days they had been steaming up from the sea by unfrequented channels, and man had been as rare as a rare butterfly. One saw one day a canoe, another day a distant station, the next no men at all. He began to perceive that man is indeed a rare animal, having but a precarious hold upon this land.

He perceived it more clearly as the days passed, and he made his devious way to the Batemo, in the company of this remarkable commander, who ruled over one big gun, and was forbidden to waste his ammunition. Holroyd was learning Spanish industriously, but he was still in the present tense and substantive stage of speech, and the only other person who had any words of English was a negro stoker, who had them all wrong. The second in command was a Portuguese, da Cunha, who spoke French, but it was a different sort of French from the French Holroyd had learned in Southport, and their intercourse was confined to politenesses and simple propositions about the weather. And the weather, like everything else in this amazing new world, the weather had no human aspect, and was hot by night and hot by day, and the air steam, even the wind was hot steam, smelling of vegetation in decay : and the alligators and the strange birds, the flies of many sorts and sizes, the beetles, the ants, the snakes and monkeys seemed to wonder what man was doing in an atmosphere that had no gladness in its sunshine and no coolness in its night. To wear clothing was intolerable, but to cast it aside was to scorch by day, and expose an ampler area to the mosquitoes by night ; to go on deck by day was to be blinded by glare and to stay below was to suffocate. And in the daytime came certain flies, extremely clever and noxious about one's wrist and ankle. Captain Gerilleau, who was Holroyd's sole distraction from these physical distresses, developed into a formidable bore, telling the simple story of his heart's affections day by day, a string of anonymous women, as if he was telling beads. Sometimes he suggested sport, and they shot at alligators, and at rare intervals they came to human aggregations in the waste of trees, and stayed for a day or so, and drank and sat about ; and, one night, danced with Creole girls, who found Holroyd's poor elements of Spanish, without either past tense or future, amply sufficient for their purposes. But these were mere luminous chunks in

the long grey passage of the streaming river, up which the throbbing engines beat. A certain liberal heathen deity, in the shape of a demi-john, held seductive court aft, and, it is probable, forward.

But Gerilleau learned things about the ants, more things and more, at this stopping-place and that, and became interested in his mission.

"Dey are a new sort of ant," he said. "We have got to be—what do you call it?—entomologie? Big. Five centimetres! Some bigger! It is ridiculous. We are like the monkeys—sent to pick insects. . . . But dey are eating up the country."

He burst out indignantly. "Suppose—suddenly, there are complications with Europe. Here am I—soon we shall be above the Rio Negro—and my gun, useless!"

He nursed his knee and mused.

"Dose people who were dere at de dancing place, dey 'ave come down. Dey 'ave lost all they got. De ants come to deir house one afternoon. Every one run out. You know when de ants come one must—every one runs out and they go over the house. If you stayed they'd eat you. See? Well, presently dey go back, dey say, 'The ants 'ave gone.' . . . De ants 'aven't gone. Dey try to go in—de son, 'e goes in. De ants fight."

"Swarm over him?"

"Blte 'im. Presently he comes out again—screaming and running. He runs past them to the river. See? He get into de water and drowns de ants—yes." Gerilleau paused, brought his liquid eyes close to Holroyd's face, tapped Holroyd's knee with his knuckle. "That night he dies, just as if he was stung by a snake."

"Poisoned—by the ants?"

"Who knows?" Gerilleau shrugged his shoulders. "Perhaps they bit him badly. . . . When I joined dis service I joined to fight men. Dese things, dese ants, dey come and go. It is no business for men."

After that he talked frequently of the ants to Holroyd, and whenever they chanced to drift against any speck of humanity in that waste of water and sunshine and distant trees, Holroyd's improving knowledge of the language enabled him to recognise the ascendant word *Saiba*, more and more completely dominating the whole.

He perceived the ants were becoming interesting, and the nearer he drew to them the more interesting they became. Gerilleau abandoned his old themes almost suddenly, and the Portuguese lieutenant became a conversational figure; he knew something about the leaf-cutting ant, and expanded his knowledge. Gerilleau sometimes rendered what he had to tell to Holroyd. He told of the little workers that swarm and fight, and the big workers that command and rule and how these

latter always crawled to the neck and how their bites drew blood. He told how they cut leaves and made fungus beds, and how their nests in Caracas are sometimes a hundred yards across. Two days the three men spent disputing whether ants have eyes. The discussion grew dangerously heated on the second afternoon, and Holroyd saved the situation by going ashore in a boat to catch ants and see. He captured various specimens and returned, and some had eyes and some hadn't. Also, they argued, do ants bite or sting?

"Dese ants," said Gerilleau, after collecting information at a rancho, "have big eyes. They don't run about blind—not as most ants do. No! Dey get in corners and watch what you do."

"And they sting?" asked Holroyd.

"Yes. Dey sting. Dere is poison in the sting." He meditated. "I do not see what men can do against ants. Dey come and go."

"But these don't go."

"They will," said Gerilleau.

Past Tamandu there is a long low coast of eighty miles without any population, and then one comes to the confluence of the main river and the Batemo arm like a great lake, and then the forest came nearer, came at last intimately near. The character of the channel changes, snags abound, and the *Benjamin Constant* moored by a cable that night, under the very shadow of dark trees. For the first time for many days came a spell of coolness, and Holroyd and Gerilleau sat late, smoking cigars and enjoying this delicious sensation. Gerilleau's mind was full of ants and what they could do. He decided to sleep at last, and lay down on a mattress on deck, a man hopelessly perplexed; his last words, when he already seemed asleep, were to ask, with a flourish of despair, "What can one do with ants? . . . De whole thing is absurd."

Holroyd was left to scratch his bitten wrists, and meditate alone.

He sat on the bulwark and listened to the changes in Gerilleau's breathing until he was fast asleep, and then the ripple and lap of the stream took his mind, and brought back that sense of immensity that had been growing upon him since first he had left Para and come up the river. The monitor showed but one small light, and there was first a little talking forward and then stillness. His eyes went from the dim black outlines of the middle works of the gunboat towards the bank, to the black overwhelming mysteries of forest, lit now and then by a fire-fly, and never still from the murmur of alien and mysterious activities. . . .

It was the inhuman immensity of this land that astonished and oppressed him. He knew the skies were empty of men, the stars were specks in an incredible vastness of space; he knew the ocean was enormous and untamable, but in England

he had come to think of the land as man's. In England it is indeed man's, the wild things live by sufferance, grow on lease, everywhere the roads, the fences, and absolute security runs. In an atlas, too, the land is man's, and all coloured to show his claim to it—in vivid contrast to the universal independent blueness of the sea. He had taken it for granted that a day would come when everywhere about the earth, plough and culture, light tramways, and good roads, an ordered security, would prevail. But now, he doubted.

This forest was interminable, it had an air of being invincible, and Man seemed at best an infrequent precarious intruder. One travelled for miles amidst the still, silent struggle of giant trees, of strangulating creepers, of assertive flowers, everywhere the alligator, the turtle, and endless varieties of birds and insects seemed at home, dwelt irreplaceably—but man, man at most held a footing upon resentful clearings, fought weeds, fought beasts and insects for the barest foothold, fell a prey to snake and beast, insect and fever, and was presently carried away. In many places down the river he had been manifestly driven back, this deserted creek or that preserved the name of a *casa*, and here and there ruinous white walls and a shattered tower enforced the lesson. The puma, the jaguar, were more the masters here. . . .

Who were the real masters ?

In a few miles of this forest there must be more ants than there are men in the whole world ! This seemed to Holroyd a perfectly new idea. In a few thousand years men had emerged from barbarism to a stage of civilisation that made them feel lords of the future and masters of the earth ! But what was to prevent the ants evolving also ? Such ants as one knew lived in little communities of a few thousand individuals, made no concerted efforts against the greater world. But they had a language, they had an intelligence ! Why should things stop at that any more than men had stopped at the barbaric stage ? Suppose presently the ants began to store knowledge, just as men had done by means of books and records, use weapons, form great empires, sustain a planned and organised war ?

Things came back to him that Gerilleau had gathered about these ants they were approaching. They used a poison like the poison of snakes. They obeyed greater leaders even as the leaf-cutting ants do. They were carnivorous, and where they came they stayed. . . .

The forest was very still. The water lapped incessantly against the side. About the lantern overhead there eddied a noiseless whirl of phantom moths.

Gerilleau stirred in the darkness and sighed. "What can one do ?" he murmured, and turned over and was still again.

Holroyd was roused from meditations that were becoming sinister by the hum of a mosquito.

The next morning Holroyd learned they were within forty kilometres of Badama, and his interest in the banks intensified. He came up whenever an opportunity offered to examine his surroundings. He could see no signs of human occupation whatever, save for a weedy ruin of a house and the green-stained façade of the long-deserted monastery at Mojû, with a forest tree growing out of a vacant window space, and great creepers netted across its vacant portals. Several flights of strange yellow butterflies with semi-transparent wings crossed the river that morning, and many alighted on the monitor and were killed by the men. It was towards afternoon that they came upon the derelict cuberta.

She did not at first appear to be derelict; both her sails were set and hanging slack in the afternoon calm, and there was the figure of a man sitting on the fore planking beside the shipped sweeps. Another man appeared to be sleeping face downwards on the sort of longitudinal bridge these big canoes have in the waist. But it was presently apparent, from the sway of her rudder and the way she drifted into the course of the gunboat, that something was out of order with her. Gerilleau surveyed her through a field-glass, and became interested in the queer darkness of the face of the sitting man, a red-faced man he seemed, without a nose—crouching he was rather than sitting, and the longer the captain looked the less he liked to look at him, and the less able he was to take his glasses away.

But he did so at last, and went a little way to call up Holroyd. Then he went back to hail the cuberta. He hailed her again, and so she drove past him. *Santa Rosa* stood out clearly as her name.

As she came by and into the wake of the monitor, she pitched a little, and suddenly the figure of the crouching man collapsed as though all its joints had given way. His hat fell off, his head was not nice to look at, and his body flopped lax and rolled out of sight behind the bulwarks.

"Caramba!" cried Gerilleau, and resorted to Holroyd forthwith.

Holroyd was half-way up the companion. "Did you see dat?" said the captain.

"Dead!" said Holroyd. "Yes. You'd better send a boat aboard. There's something wrong."

"Did you—by any chance—see his face?"

"What was it like?"

"It was—ugh!—I have no words." And the captain suddenly turned his back on Holroyd and became an active and strident commander.

The gunboat came about, steamed parallel to the erratic course of the canoe, and dropped the boat with Lieutenant da Cunha and three sailors to board her. Then the curiosity of

the captain made him draw up almost alongside as the lieutenant got aboard, so that the whole of the *Santa Rosa*, deck and hold, was visible to Holroyd.

He saw now clearly that the sole crew of the vessel was these two dead men, and though he could not see their faces, he saw by their outstretched hands, which were all of ragged flesh, that they had been subjected to some strange exceptional process of decay. For a moment his attention concentrated on those two enigmatical bundles of dirty clothes and laxly flung limbs, and then his eyes went forward to discover the open hold piled high with trunks and cases, and aft, to where the little cabin gaped inexplicably empty. Then he became aware that the planks of the middle decking were dotted with moving black specks.

His attention was riveted by these specks. They were all walking in directions radiating from the fallen man in a manner—the image came unsought to his mind—like the crowd dispersing from a bull-fight.

He became aware of Gerilleau beside him. "Capo," he said, "have you your glasses? Can you focus as closely as those planks there?"

Gerilleau made an effort, grunted, and handed him the glasses.

There followed a moment of scrutiny. "It's ants," said the Englishman, and handed the focused field-glasses back to Gerilleau.

His impression of them was of a crowd of large black ants, very like ordinary ants except for their size, and for the fact that some of the larger of them bore a sort of clothing of grey. But at the time his inspection was too brief for particulars. The head of Lieutenant da Cunha appeared over the side of the cuberta, and a brief colloquy ensued.

"You must go aboard," said Gerilleau.

The lieutenant objected that the boat was full of ants.

"You have your boots," said Gerilleau.

The lieutenant changed the subject. "How did these men die?" he asked.

Captain Gerilleau embarked upon speculations that Holroyd could not follow, and the two men disputed with a certain increasing vehemence. Holroyd took up the field-glass and resumed his scrutiny, first of the ants and then of the dead man amidstships.

He has described these ants to me very particularly.

He says they were as large as any ants he has ever seen, black and moving with a steady deliberation very different from the mechanical fussiness of the common ant. About one in twenty was much larger than its fellows, and with an exceptionally large head. These reminded him at once of the master workers who are said to rule over the leaf-cutter ants; like them they seemed to be directing and co-ordinating the general movements. They tilted their bodies back in a manner altogether

singular as if they made some use of the fore feet. And he had a curious fancy that he was too far off to verify, that most of these ants of both kinds were wearing accoutrements, had things strapped about their bodies by bright white bands like white metal threads. . . .

He put down the glasses abruptly, realising that the question of discipline between the captain and his subordinate had become acute.

"It is your duty," said the captain, "to go aboard. It is my instructions."

The lieutenant seemed on the verge of refusing. The head of one of the mulatto sailors appeared beside him.

"I believe these men were killed by the ants," said Holroyd abruptly in English.

The captain burst into a rage. He made no answer to Holroyd. "I have commanded you to go aboard," he screamed to his subordinate in Portuguese. "If you do not go aboard forthwith it is mutiny—rank mutiny. Mutiny and cowardice! Where is the courage that should animate us? I will have you in irons, I will have you shot like a dog." He began a torrent of abuse and curses, he danced to and fro. He shook his fists, he behaved as if beside himself with rage, and the lieutenant, white and still, stood looking at him. The crew appeared forward, with amazed faces.

Suddenly, in a pause of this outbreak, the lieutenant came to some heroic decision, saluted, drew himself together and clambered upon the deck of the cuberta.

"Ah!" said Gerilleau, and his mouth shut like a trap. Holroyd saw the ants retreating before da Cunha's boots. The Portuguese walked slowly to the fallen man, stooped down, hesitated, clutched his coat and turned him over. A black swarm of ants rushed out of the clothes, and da Cunha stepped back very quickly and trod two or three times on the deck.

Holroyd put up the glasses. He saw the scattered ants about the invader's feet, and doing what he had never seen ants doing before. They had nothing of the blind movements of the common ant; they were looking at him—as a rallying crowd of men might look at some gigantic monster that had dispersed it.

"How did he die?" the captain shouted.

Holroyd understood the Portuguese to say the body was too much eaten to tell.

"What is there forward?" asked Gerilleau.

The lieutenant walked a few paces, and began his answer in Portuguese. He stopped abruptly, and beat off something from his leg. He made some peculiar steps as if he was trying to stamp on something invisible, and went quickly towards the side. Then he controlled himself, turned about, walked deliberately forward to the hold, clambered up to the fore decking, from which the sweeps are worked, stooped for a time over

the second man, groaned audibly, and made his way back and aft to the cabin, moving very rigidly. He turned and began a conversation with his captain, cold and respectful in tone on either side, contrasting vividly with the wrath and insult of a few moments before. Holroyd gathered only fragments of its purport.

He reverted to the field-glasses, and was surprised to find the ants had vanished from all the exposed surfaces of the deck. He turned towards the shadows beneath the decking, and it seemed to him they were full of watching eyes.

The cuberta, it was agreed, was derelict, but too full of ants to put men aboard to sit and sleep: it must be towed. The lieutenant went forward to take in and adjust the cable, and the men in the boat stood up to be ready to help him. Holroyd's glasses searched the canoe.

He became more and more impressed by the fact that a great if minute and furtive activity was going on. He perceived that a number of gigantic ants—they seemed nearly a couple of inches in length—carrying oddly-shaped burthens for which he could imagine no use—were moving in rushes from one point of obscurity to another. They did not move in columns across the exposed places, but in open, spaced-out lines, oddly suggestive of the rushes of modern infantry advancing under fire. A number were taking cover under the dead man's clothes, and a perfect swarm was gathering along the side over which da Cunha must presently go.

He did not see them actually rush for the lieutenant as he returned, but he had no doubt they did make a concerted rush. Suddenly the lieutenant was shouting and cursing and beating at his legs. "I'm stung!" he shouted, with a face of hate and accusation towards Gerilleau.

Then he vanished over the side, dropped into his boat, and plunged at once into the water. Holroyd heard the splash.

The three men in the boat pulled him out and brought him aboard, and that night he died.

§ 3

Holroyd and the captain came out of the cabin in which the swollen and contorted body of the lieutenant lay, and stood together at the stern of the monitor, staring at the sinister vessel they trailed behind them. It was a close, dark night that had only phantom flickerings of sheet lightning to illuminate it. The cuberta, a vague black triangle, rocked about in the steamer's wake, her sails bobbing and flapping, and the black smoke from the funnels, spark-lit ever and again, streamed over her swaying masts.

Gerilleau's mind was inclined to run on the unkind things the lieutenant had said in the heat of his last fever.

"He says I murdered 'im," he protested. "It is simply

absurd. Some one 'ad to go aboard. Are we to run away from these confounded ants whenever they show up?"

Holroyd said nothing. He was thinking of a disciplined rush of little black shapes across bare sunlit planking.

"It was his place to go," harped Gerilleau. "He died in the execution of his duty. What has he to complain of? Murdered! . . . But the poor fellow was—what is it?—demented. He was not in his right mind. The poison swelled him. . . . U'm."

They came to a long silence.

"We will sink that canoe—burn it."

"And then?"

The inquiry irritated Gerilleau. His shoulders went up, his hands flew out at right angles from his body. "What is one to do?" he said, his voice going up to an angry squeak.

"Anyhow," he broke out vindictively, "every ant in dat cuberta!—I will burn dem alive!"

Holroyd was not moved to conversation. A distant ululation of howling monkeys filled the sultry night with foreboding sounds, and as the gunboat drew near the black mysterious banks this was reinforced by a depressing clamour of frogs.

"What is one to do?" the captain repeated after a vast interval, and suddenly becoming active and savage and blasphemous, decided to burn the *Santa Rosa* without further delay. Every one aboard was pleased by that idea, every one helped with zest; they pulled in the cable, cut it, and dropped the boat and fired her with tow and kerosene, and soon the cuberta was crackling and flaring merrily amidst the immensities of the tropical night. Holroyd watched the mounting yellow flare against the blackness, and the livid flashes of sheet lightning that came and went above the forest summits, throwing them into momentary silhouette, and his stoker stood behind him watching also.

The stoker was stirred to the depths of his linguistics. "*Satüba* go pop, pop," he said. "Wahaw!" and laughed richly.

But Holroyd was thinking that these little creatures on the decked canoe had also eyes and brains.

The whole thing impressed him as incredibly foolish and wrong, but—what was one to do? This question came back enormously reinforced on the morrow, when at last the gunboat reached Badama.

This place, with its leaf-thatch-covered houses and sheds, its creeper-invaded sugar-mill, its little jetty of timber and canes, was very still in the morning heat, and showed never a sign of living men. Whatever ants there were at that distance were too small to see.

"All the people have gone," said Gerilleau, "but we will do one thing anyhow. We will 'oot and vissel."

So Holroyd hooted and whistled.

Then the captain fell into a doubting fit of the worst kind. "Dere is one thing we can do," he said presently.

"What's that?" said Holroyd.

"'Oot and vissel again."

So they did.

The captain walked his deck and gesticulated to himself. He seemed to have many things on his mind. Fragments of speeches came from his lips. He appeared to be addressing some imaginary public tribunal either in Spanish or Portuguese. Holroyd's improving ear detected something about ammunition. He came out of these preoccupations suddenly into English. "My dear 'Olroyd!" he cried, and broke off with "But what *can* one do?"

They took the boat and the field-glasses, and went close in to examine the place. They made out a number of big ants, whose still postures had a certain effect of watching them, dotted about the edge of the rude embarkation jetty. Gerilleau tried ineffectual pistol-shots at these. Holroyd thinks he distinguished curious earthworks running between the nearer houses, that may have been the work of the insect conquerors of those human habitations. The explorers pulled past the jetty, and became aware of a human skeleton wearing a loin-cloth, and very bright and clean and shining, lying beyond. They came to a pause regarding this. . . .

"I 'ave all dose lives to consider," said Gerilleau suddenly.

Holroyd turned and stared at the captain, realising slowly that he referred to the unappetising mixture of races that constituted his crew.

"To send a landing party—it is impossible—impossible. They will be poisoned, they will swell, they will swell up and abuse me and die. It is totally impossible. . . . If we land, I must land alone, alone, in thick boots and with my life in my hand. Perhaps I should live. Or again—I might not land. I do not know. I do not know."

Holroyd thought he did, but he said nothing.

"De whole thing," said Gerilleau suddenly, "'as been got up to make me ridiculous. De whole thing!"

They paddled about and regarded the clean white skeleton from various points of view, and then they returned to the gun-boat. Then Gerilleau's indecisions became terrible. Steam was got up, and in the afternoon the monitor went on up the river with an air of going to ask somebody something, and by sunset came back again and anchored. A thunderstorm gathered and broke furiously, and then the night became beautifully cool and quiet and every one slept on deck. Except Gerilleau, who tossed about and muttered. In the dawn he awakened Holroyd.

"Lord!" said Holroyd, "what now?"

"I have decided," said the captain.

"What—to land?" said Holroyd, sitting up brightly.

"No!" said the captain, and was for a time very reserved. "I have decided," he repeated, and Holroyd manifested symptoms of impatience.

"Well—yes," said the captain, "*I shall fire de big gun!*"

And he did! Heaven knows what the ants thought of it, but he did. He fired it twice with great sternness and ceremony. All the crew had wadding in their ears, and there was an effect of going into action about the whole affair, and first they hit and wrecked the old sugar-mill, and then they smashed the abandoned store behind the jetty. And then Gerilleau experienced the inevitable reaction.

"It is no good," he said to Holroyd; "no good at all. No sort of bally good. We must go back—for instructions. Dere will be de devil of a row about dis ammunitiun—oh! de *devil* of a row! You don't know, 'Olroyd. . . ."

He stood regarding the world in infinite perplexity for a space.

"But what else was there to *do*?" he cried.

In the afternoon the monitor started down stream again, and in the evening a landing party took the body of the lieutenant and buried it on the bank upon which the new ants have so far not appeared.

§ 4

I heard this story in a fragmentary state from Holroyd not three weeks ago.

These new ants have got into his brain, and he has come back to England with the idea, as he says, of "exciting people" about them "before it is too late." He says they threaten British Guiana, which cannot be much over a trifle of a thousand miles from their present sphere of activity, and that the Colonial Office ought to get to work upon them at once. He declaims with great passion: "These are intelligent ants. Just think what that means!"

There can be no doubt they are a serious pest, and that the Brazilian Government is well advised in offering a prize of five hundred pounds for some effectual method of extirpation. It is certain too that since they first appeared in the hills beyond Badama, about three years ago, they have achieved extraordinary conquests. The whole of the south bank of the Batemo River, for nearly sixty miles, they have in their effectual occupation: they have driven men out completely, occupied plantations and settlements, and boarded and captured at least one ship. It is even said they have in some inexplicable way bridged the very considerable Capuarana arm and pushed many miles towards the Amazon itself. There can be little doubt that they are far more reasonable and with a far better social organisation than any previously known ant species; instead of being in dispersed societies they are organised into what is in effect a single nation; but their peculiar

and immediate formidableness lies not so much in this as in the intelligent use they make of poison against their larger enemies. It would seem this poison of theirs is closely akin to snake poison, and it is highly probable they actually manufacture it, and that the larger individuals among them carry the needle-like crystals of it in their attacks upon men.

Of course it is extremely difficult to get any detailed information about these new competitors for the sovereignty of the globe. No eye-witnesses of their activity, except for such glimpses as Holroyd's, have survived the encounter. The most extraordinary legends of their prowess and capacity are in circulation in the region of the Upper Amazon, and grow daily as the steady advance of the invader stimulates men's imaginations through their fears. These strange little creatures are credited not only with the use of implements and a knowledge of fire and metals and with organised feats of engineering that stagger our Northern minds—unused as we are to such feats as that of the Saibas of Rio de Janeiro, who in 1841 drove a tunnel under Parahyba where it is as wide as the Thames at London Bridge—but with an organised and detailed method of record and communication analogous to our books. So far their action has been a steady progressive settlement, involving the flight or slaughter of every human being in the new areas they invade. They are increasing rapidly in numbers, and Holroyd at least is firmly convinced that they will finally dispossess man over the whole of tropical South America.

And why should they stop at tropical South America?

Well, there they are, anyhow. By 1911 or thereabouts, if they go on as they are going, they ought to strike the Capuarana Extension Railway, and force themselves upon the attention of the European capitalist.

By 1920 they will be half-way down the Amazon. I fix 1950 or '60 at the latest for the discovery of Europe.

STORY TWO

A VISION OF JUDGMENT

§ 1

BRU-A-A-A.

I listened, not understanding.

Wa-ra-ra-ra.

"Good Lord!" said I, still only half awake. "What an infernal shindy!"

Ra-ra-ra-ra-ra-ra-ra-ra. Ta-ra-rra-ra.

"It's enough," said I, "to wake——" and stopped short. Where was I?

Ta-rra-rara—louder and louder.

"It's either some new invention——"

Toora-toora-toora! Deafening!

"No," said I, speaking loud in order to hear myself. "That's the Last Trump."

Tooo-rraa!

§ 2

The last note jerked me out of my grave like a hooked minnow

I saw my monument (rather a mean little affair, and I wished I knew who'd done it), and the old elm tree and the sea view vanished like a puff of steam, and then all about me—a multitude no man could number, nations, tongues, kingdoms, peoples—children of all the ages, in an amphitheatrical space as vast as the sky. And over against us, seated on a throne of dazzling white cloud, the Lord God and all the host of his angels. I recognised Azreal by his darkness and Michael by his sword, and the great angel who had blown the trumpet stood with the trumpet still half raised.

§ 3

"Prompt," said the little man beside me. "Very prompt. Do you see the angel with the book?"

He was ducking and craning his head about to see over and under and between the souls that crowded round us. "Everybody's here," he said. "Everybody. And now we shall know——"

"There's Darwin," he said, going off at a tangent. "*He'll* catch it! And there—you see?—that tall, important-looking man trying to catch the eye of the Lord God, that's the Duke. But there's a lot of people one doesn't know."

"Oh! there's Priggles, the publisher. I have always wondered about printers' overs. Priggles was a clever man. . . . But we shall know now—even about him."

"I shall hear all that. I shall get most of the fun before.
... My letter's S."

He drew the air in between his teeth.

"Historical characters, too. See? That's Henry the Eighth. There'll be a good bit of evidence. Oh, damn! He's Tudor."

He lowered his voice. "Notice this chap, just in front of us, all covered with hair. Paleolithic, you know. And there again——"

But I did not heed him, because I was looking at the Lord God.

§ 4

"Is this *all*?" asked the Lord God.

The angel at the book—it was one of countless volumes, like the British Museum Reading-room Catalogue, glanced at us and seemed to count us in the instant

"That's all," he said, and added: "It was, O God, a very little planet."

The eyes of God surveyed us.

"Let us begin," said the Lord God.

§ 5

The angel opened the book and read a name. It was a name full of A's, and the echoes of it came back out of the uttermost parts of space. I did not catch it clearly, because the little man beside me said, in a sharp jerk, "*What's that?*" It sounded like "*Ahab*" to me; but it could not have been the Ahab of Scripture.

Instantly a small black figure was lifted up to a puffy cloud at the very feet of God. It was a stiff little figure, dressed in rich outlandish robes and crowned, and it folded its arms and scowled.

"Well?" said God, looking down at him.

We were privileged to hear the reply, and indeed the acoustic properties of the place were marvellous.

"I plead guilty," said the little figure.

"Tell them what you have done," said the Lord God.

"I was a king," said the little figure, "a great king, and I was lustful and proud and cruel. I made wars, I devastated countries, I built palaces, and the mortar was the blood of men. Hear, O God, the witnesses against me, calling to you for vengeance. Hundreds and thousands of witnesses." He waved his hands towards us. "And worse! I took a prophet—one of your prophets——"

"One of my prophets," said the Lord God.

"And because he would not bow to me, I tortured him for four days and nights, and in the end he died. I did more, O God, I blasphemed. I robbed you of your honours——"

"Robbed me of my honours," said the Lord God.

"I caused myself to be worshipped in your stead. No evil was there but I practised it; no cruelty wherewith I did not stain my soul. And at last you smote me, O God!"

God raised his eyebrows slightly.

"And I was slain in battle. And so I stand before you, meet for your nethermost Hell! Out of your greatness daring no lies, daring no pleas, but telling the truth of my iniquities before all mankind."

He ceased. His face I saw distinctly, and it seemed to me white and terrible and proud and strangely noble. I thought of Milton's Satan.

"Most of that is from the Obelisk," said the Recording Angel, finger on page.

"It is," said the Tyrannous Man, with a faint touch of surprise.

Then suddenly God bent forward and took this man in his hand, and held him up on his palm as if to see him better. He was just a little dark stroke in the middle of God's palm.

"Did he do all this?" said the Lord God.

The Recording Angel flattened his book with his hand.

"In a way," said the Recording Angel, carelessly.

Now when I looked again at the little man his face had changed in a very curious manner. He was looking at the Recording Angel with a strange apprehension in his eyes, and one hand fluttered to his mouth. Just the movement of a muscle or so, and all that dignity of defiance was gone.

"Read," said the Lord God.

And the angel read, explaining very carefully and fully all the wickedness of the Wicked Man. It was quite an intellectual treat.—A little "daring" in places, I thought, but of course Heaven has its privileges. . . .

§ 6

Everybody was laughing. Even the prophet of the Lord whom the Wicked Man had tortured had a smile on his face. The Wicked Man was really such a preposterous little fellow.

"And then," read the Recording Angel, with a smile that set us all agog, "one day, when he was a little irascible from over-eating, he——"

"Oh, not *that*," cried the Wicked Man, "nobody knew of *that*."

"It didn't happen," screamed the Wicked Man. "I was bad—I was really bad. Frequently bad, but there was nothing so silly—so absolutely silly——"

The angel went on reading.

"O God!" cried the Wicked Man. "Don't let them know that! I'll repent! I'll apologise. . . ."

The Wicked Man on God's hand began to dance and weep. Suddenly shame overcame him. He made a wild rush to jump off the ball of God's little finger, but God stopped him by

a dexterous turn of the wrist. Then he made a rush for the gap between hand and thumb, but the thumb closed. And all the while the angel went on reading—reading. The Wicked Man rushed to and fro across God's palm, and then suddenly turned about and fled up the sleeve of God.

I expected God would turn him out, but the mercy of God is infinite.

The Recording Angel paused.

"Eh?" said the Recording Angel.

"Next," said God, and before the Recording Angel could call upon the name a hairy creature in filthy rags stood upon God's palm.

§ 7

"Has God got Hell up his sleeve then?" said the little man beside me.

"Is there a Hell?" I asked.

"If you notice," he said—he peered between the feet of the great angels—"there's no particular indication of the Celestial City."

"Ssh!" said a little woman near us, scowling. "Hear this blessed Saint!"

§ 8

"He was Lord of the Earth, but I was the prophet of the God of Heaven," cried the Saint, "and all the people marvelled at the sign. For I, O God, knew of the glories of thy Paradise. No pain, no hardship, gashing with knives, splinters thrust under my nails, strips of flesh flayed off, all for the glory and honour of God."

God smiled.

"And at last I went, I in my rags and sores, smelling of my holy discomforts——"

Gabriel laughed abruptly.

"And lay outside his gates, as a sign, as a wonder——"

"As a perfect nuisance," said the Recording Angel, and began to read, heedless of the fact that the Saint was still speaking of the gloriously unpleasant things he had done that Paradise might be his.

And behold, in that book the record of the Saint also was a revelation, a marvel.

It seemed not ten seconds before the Saint also was rushing to and fro over the great palm of God. Not ten seconds! And at last he also shrieked beneath that pitiless and cynical exposition, and fled also, even as the Wicked Man had fled, into the shadow of the sleeve. And it was permitted us to see into the shadow of the sleeve. And the two sat side by side, stark of all delusions, in the shadow of the robe of God's charity, like brothers.

And thither also I fled in my turn.

§ 9

"And now," said God, as he shook us out of his sleeve upon the planet he had given us to live upon, the planet that whirled about green Sirius for a sun, "now that you understand me and each other a little better . . . try again."

Then he and his great angels turned themselves about and suddenly had vanished.

The Throne had vanished.

All about me was a beautiful land, more beautiful than any I had ever seen before—waste, austere, and wonderful; and all about me were the enlightened souls of men in new clean bodies. . . .

STORY THREE

THE BEAUTIFUL SUIT

THERE was once a little man whose mother made him a beautiful suit of clothes. It was green and gold, and woven so that I cannot describe how delicate and fine it was, and there was a tie of orange fluffiness that tied up under his chin. And the buttons in their newness shone like stars. He was proud and pleased by his suit beyond measure, and stood before the long looking-glass when first he put it on, so astonished and delighted with it that he could hardly turn himself away.

He wanted to wear it everywhere, and show it to all sorts of people. He thought over all the places he had ever visited, and all the scenes he had ever heard described, and tried to imagine what the feel of it would be if he were to go now to those scenes and places wearing his shining suit, and he wanted to go out forthwith into the long grass and the hot sunshine of the meadow wearing it. Just to wear it! But his mother told him "No." She told him he must take great care of his suit, for never would he have another nearly so fine; he must save it and save it, and only wear it on rare and great occasions. It was his wedding-suit, she said. And she took the buttons and twisted them up with tissue paper for fear their bright newness should be tarnished, and she tacked little guards over the cuffs and elbows, and wherever the suit was most likely to come to harm. He hated and resisted these things, but what could he do? And at last her warnings and persuasions had effect, and he consented to take off his beautiful suit and fold it into its proper creases, and put it away. It was almost as though he gave it up again. But he was always thinking of wearing it, and of the supreme occasions when some day it might be worn without the guards, without the tissue paper on the buttons, utterly and delightfully never caring, beautiful beyond measure.

One night, when he was dreaming of it after his habit, he dreamt he took the tissue paper from one of the buttons, and found its brightness a little faded, and that distressed him mightily in his dream. He polished the poor faded button and polished it, and, if anything, it grew duller. He woke up and lay awake, thinking of the brightness slightly dulled, and wondering how he would feel if perhaps when the great occasion (whatever it might be) should arrive, one button should chance to be ever so little short of its first glittering freshness, and for days and days that thought remained with him distressingly. And when next his mother let him wear his suit, he was tempted and nearly gave way to the temptation just to fumble off a bit of tissue paper and see if indeed the buttons were keeping as bright as ever.

He went trimly along on his way to church, full of this wild

desire. For you must know his mother did, with repeated and careful warnings, let him wear his suit at times, on Sundays, for example, to and fro from church, when there was no threatening of rain, no dust blowing, nor anything to injure it, with its buttons covered and its protections tacked upon it, and a sunshade in his hand to shadow it if there seemed too strong a sunlight for its colours. And always, after such occasions, he brushed it over and folded it exquisitely as she had taught him, and put it away again.

Now all these restrictions his mother set to the wearing of his suit he obeyed, always he obeyed them, until one strange night he woke up and saw the moonlight shining outside his window. It seemed to him the moonlight was not common moonlight, nor the night a common night, and for awhile he lay quite drowsily, with this odd persuasion in his mind. Thought joined on to thought like things that whisper warmly in the shadows. Then he sat up in his little bed suddenly very alert, with his heart beating very fast, and a quiver in his body from top to toe. He had made up his mind. He knew that now he was going to wear his suit as it should be worn. He had no doubt in the matter. He was afraid, terribly afraid, but glad, glad.

He got out of his bed and stood for a moment by the window looking at the moonshine-flooded garden, and trembling at the thing he meant to do. The air was full of a minute clamour of crickets and murmurings, of the infinitesimal shoutings of little living things. He went very gently across the creaking boards, for fear that he might wake the sleeping house, to the big dark clothes-press wherein his beautiful suit lay folded, and he took it out garment by garment, and softly and very eagerly tore off its tissue-paper covering and its tacked protections until there it was, perfect and delightful as he had seen it when first his mother had given it to him—a long time it seemed ago. Not a button had tarnished, not a thread had faded on this dear suit of his; he was glad enough for weeping as in a noiseless hurry he put it on. And then back he went, soft and quick, to the window that looked out upon the garden, and stood there for a minute, shining in the moonlight, with his buttons twinkling like stars, before he got out on the sill, and, making as little of a rustling as he could, clambered down to the garden path below. He stood before his mother's house, and it was white and nearly as plain as by day, with every window-blind but his own shut like an eye that sleeps. The trees cast still shadows like intricate black lace upon the wall.

The garden in the moonlight was very different from the garden by day; moonshine was tangled in the hedges and stretched in phantom cobwebs from spray to spray. Every flower was gleaming white or crimson black, and the air was a-quiver with the thridding of small crickets and nightingales singing unseen in the depths of the trees.

There was no darkness in the world, but only warm, mysterious shadows, and all the leaves and spikes were edged and lined with iridescent jewels of dew. The night was warmer than any night had ever been, the heavens by some miracle at once vaster and nearer, and, spite of the great ivory-tinted moon that ruled the world, the sky was full of stars.

The little man did not shout nor sing for all his infinite gladness. He stood for a time like one awe-stricken, and then, with a queer small cry and holding out his arms, he ran out as if he would embrace at once the whole round immensity of the world. He did not follow the neat set paths that cut the garden squarely, but thrust across the beds and through the wet, tall, scented herbs, through the night-stock and the nicotine and the clusters of phantom white mallow flowers and through the thickets of southernwood and lavender, and knee-deep across a wide space of mignonette. He came to the great hedge, and he thrust his way through it, and though the thorns of the brambles scored him deeply and tore threads from his wonderful suit, and though burrs and goose-grass and havers caught and clung to him, he did not care. He did not care, for he knew it was all part of the wearing for which he had longed. "I am glad I put on my suit," he said; "I am glad I wore my suit."

Beyond the hedge he came to the duck-pond, or at least to what was the duck-pond by day. But by night it was a great bowl of silver moonshine all noisy with singing frogs, of wonderful silver moonshine twisted and clotted with strange patternings, and the little man ran down into its waters between the thin black rushes, knee-deep and waist-deep and to his shoulders, smiting the water to black and shining wavelets with either hand, swaying and shivering wavelets, amidst which the stars were netted in the tangled reflections of the brooding trees upon the bank. He waded until he swam, and so he crossed the pond and came out upon the other side, trailing, as it seemed to him, not duckweed, but very silver in long, clinging, dripping masses. And up he went through the transfigured tangles of the willow-herb and the uncut seeding grasses of the farther bank. He came glad and breathless into the high road. "I am glad," he said, "beyond measure, that I had clothes that fitted this occasion."

The high road ran straight as an arrow flies, straight into the deep-blue pit of sky beneath the moon, a white and shining road between the singing nightingales, and along it he went, running now and leaping, and now walking and rejoicing, in the clothes his mother had made for him with tireless, loving hands. The road was deep in dust, but that for him was only soft whiteness; and as he went a great dim moth came fluttering round his wet and shimmering and hastening figure. At first he did not heed the moth, and then he waved his hands at it, and made a sort of dance with it as it circled round his head.

"Soft moth!" he cried, "dear moth! And wonderful night, wonderful night of the world! Do you think my clothes are beautiful, dear moth? As beautiful as your scales and all this silver vesture of the earth and sky?"

And the moth circled closer and closer until at last its velvet wings just brushed his lips. . . .

And next morning they found him dead, with his neck broken, in the bottom of the stone pit, with his beautiful clothes a little bloody, and foul and stained with the duckweed from the pond. But his face was a face of such happiness that, had you seen it, you would have understood indeed how that he had died happy, never knowing that cool and streaming silver for the duckweed in the pond.

STORY FOUR

THE DOOR IN THE WALL

§ 1

ONE confidential evening, not three months ago, Lionel Wallace told me this story of the Door in the Wall. And at the time I thought that so far as he was concerned it was a true story.

He told it me with such a direct simplicity of conviction that I could not do otherwise than believe in him. But in the morning, in my own flat, I woke to a different atmosphere; and as I lay in bed and recalled the things he had told me, stripped of the glamour of his earnest slow voice, denuded of the focused, shaded table light, the shadowy atmosphere that wrapped about him and me, and the pleasant bright things, the dessert and glasses and napery of the dinner we had shared, making them for the time a bright little world quite cut off from everyday realities, I saw it all as frankly incredible. "He was mystifying!" I said, and then: "How well he did it! . . . It isn't quite the thing I should have expected him, of all people, to do well."

Afterwards as I sat up in bed and sipped my morning tea, I found myself trying to account for the flavour of reality that perplexed me in his impossible reminiscences, by supposing they did in some way suggest, present, convey—I hardly know which word to use—experiences it was otherwise impossible to tell.

Well, I don't resort to that explanation now. I have got over my intervening doubts. I believe now, as I believed at the moment of telling, that Wallace did to the very best of his ability strip the truth of his secret for me. But whether he himself saw, or only thought he saw, whether he himself was the possessor of an inestimable privilege or the victim of a fantastic dream, I cannot pretend to guess. Even the facts of his death, which ended my doubts for ever, throw no light on that.

That much the reader must judge for himself.

I forget now what chance comment or criticism of mine, moved so reticent a man to confide in me. He was, I think, defending himself against an imputation of slackness and unreliability I had made in relation to a great public movement, in which he had disappointed me. But he plunged suddenly. "I have," he said, "a preoccupation—"

"I know," he went on, after a pause, "I have been negligent. The fact is—it isn't a case of ghosts or apparitions—but—it's an odd thing to tell of, Redmond—I am haunted. I am haunted by something—that rather takes the light out of things, that fills me with longings . . ."

He paused, checked by that English shyness that so often

overcomes us when we would speak of moving or grave or beautiful things. "You were at Saint Athelstan's all through," he said, and for a moment that seemed to me quite irrelevant. "Well"—and he paused. Then very haltingly at first, but afterwards more easily, he began to tell of the thing that was hidden in his life, the haunting memory of a beauty and a happiness that filled his heart with insatiable longings, that made all the interests and spectacle of worldly life seem dull and tedious and vain to him.

Now that I have the clue to it, the thing seems written visibly in his face. I have a photograph in which that look of detachment has been caught and intensified. It reminds me of what a woman once said of him—a woman who had loved him greatly. "Suddenly," she said, "the interest goes out of him. He forgets you. He doesn't care a rap for you—under his very nose . . ."

Yet the interest was not always out of him, and when he was holding his attention to a thing Wallace could contrive to be an extremely successful man. His career, indeed, is set with successes. He left me behind him long ago; he soared up over my head, and cut a figure in the world that I couldn't cut—anyhow. He was still a year short of forty, and they say now that he would have been in office and very probably in the new Cabinet if he had lived. At school he always beat me without effort—as it were by nature. We were at school together at Saint Athelstan's College in West Kensington for almost all our school-time. He came into the school as my co-equal, but he left far above me, in a blaze of scholarships and brilliant performance. Yet I think I made a fair average running. And it was at school I heard first of the "Door in the Wall"—that I was to hear of a second time only a month before his death.

To him at least the Door in the Wall was a real door, leading through a real wall to immortal realities. Of that I am now quite assured.

And it came into his life quite early, when he was a little fellow between five and six. I remember how, as he sat making his confession to me with a slow gravity, he reasoned and reckoned the date of it. "There was," he said, "a crimson Virginia creeper in it—all one bright uniform crimson, in a clear amber sunshine against a white wall. That came into the impression somehow, though I don't clearly remember how, and there were horse-chestnut leaves upon the clean pavement outside the green door. They were blotched yellow and green, you know, not brown nor dirty, so that they must have been new fallen. I take it that means October. I look out for horse-chestnut leaves every year and I ought to know.

"If I'm right in that, I was about five years and four months old."

He was, he said, rather a precocious little boy—he learned to talk at an abnormally early age, and he was so sane and

"old-fashioned," as people say, that he was permitted an amount of initiative that most children scarcely attain by seven or eight. His mother died when he was two, and he was under the less vigilant and authoritative care of a nursery governess. His father was a stern, preoccupied lawyer, who gave him little attention and expected great things of him. For all his brightness he found life grey and dull, I think. And one day he wandered.

He could not recall the particular neglect that enabled him to get away, nor the course he took among the West Kensington roads. All that had faded among the incurable blurs of memory. But the white wall and the green door stood out quite distinctly.

As his memory of that childish experience ran, he did at the very first sight of that door experience a peculiar emotion, an attraction, a desire to get to the door and open it and walk in. And at the same time he had the clearest conviction that either it was unwise or it was wrong of him—he could not tell which—to yield to this attraction. He insisted upon it as a curious thing that he knew from the very beginning—unless memory has played him the queerest trick—that the door was unfastened, and that he could go in as he chose.

I seem to see the figure of that little boy, drawn and repelled. And it was very clear in his mind, too, though why it should be so was never explained, that his father would be very angry if he went in through that door.

Wallace described all these moments of hesitation to me with the utmost particularity. He went right past the door, and then, with his hands in his pockets and making an infantile attempt to whistle, strolled right along beyond the end of the wall. There he recalls a number of mean dirty shops, and particularly that of a plumber and decorator with a dusty disorder of earthenware pipes, sheet lead, ball taps, pattern books of wall paper, and tins of enamel. He stood pretending to examine these things, and *coveting*, passionately desiring, the green door.

Then, he said, he had a gust of emotion. He made a run for it, lest hesitation should grip him again; he went plump with outstretched hand through the green door and let it slam behind him. And so, in a trice, he came into the garden that has haunted all his life.

It was very difficult for Wallace to give me his full sense of that garden into which he came.

There was something in the very air of it that exhilarated, that gave one a sense of lightness and good happening and well-being; there was something in the sight of it that made all its colour clean and perfect and subtly lustrous. In the instant of coming into it one was exquisitely glad—as only in rare moments, and when one is young and joyful one can be glad in this world. And everything was beautiful there. . .

Wallace mused before he went on telling me. "You see," he said, with the doubtful inflection of a man who pauses at incredible things, "there were two great panthers there. . . . Yes, spotted panthers. And I was not afraid. There was a long wide path with marble-edged flower-borders on either side, and these two huge velvety beasts were playing there with a ball. One looked up and came towards me, a little curious as it seemed. It came right up to me, rubbed its soft round ear very gently against the small hand I held out, and purred. It was, I tell you, an enchanted garden. I know. And the size? Oh! it stretched far and wide, this way and that. I believe there were hills far away. Heaven knows where West Kensington had suddenly got to. And somehow it was just like coming home.

"You know, in the very moment the door swung to behind me, I forgot the road with its fallen chestnut leaves, its cabs and tradesmen's carts, I forgot the sort of gravitational pull back to the discipline and obedience of home, I forgot all hesitations and fear, forgot discretion, forgot all the intimate realities of this life. I became in a moment a very glad and wonder-happy little boy—in another world. It was a world with a different quality, a warmer, more penetrating and mellower light, with a faint clear gladness in its air, and wisps of sun-touched cloud in the blueness of its sky. And before me ran this long wide path, invitingly, with weedless beds on either side, rich with untended flowers, and these two great panthers. I put my little hands fearlessly on their soft fur, and caressed their round ears and the sensitive corners under their ears, and played with them, and it was as though they welcomed me home. There was a keen sense of home-coming in my mind, and when presently a tall, fair girl appeared in the pathway and came to meet me, smiling, and said, 'Well?' to me, and lifted me and kissed me, and put me down and led me by the hand, there was no amazement, but only an impression of delightful rightness, of being reminded of happy things that had in some strange way been overlooked. There were broad red steps, I remember, that came into view between spikes of delphinium, and up these we went to a great avenue between very old and shady dark trees. All down this avenue, you know, between the red chapped stems, were marble seats of honour and statuary, and very tame and friendly white doves.

"Along this cool avenue my girl-friend led me, looking down—I recall the pleasant lines, the finely-modelled chin of her sweet kind face—asking me questions in a soft, agreeable voice, and telling me things, pleasant things I know, though what they were I was never able to recall. . . . Presently a Capuchin monkey, very clean, with a fur of ruddy brown and kindly hazel eyes, came down a tree to us and ran beside me, looking up at me and grinning, and presently leaped to my shoulder. So we two went on our way in great happiness."

He paused.

"Go on," I said.

"I remember little things. We passed an old man musing among laurels, I remember, and a place gay with paroquets, and came through a broad shaded colonnade to a spacious cool palace, full of pleasant fountains, full of beautiful things, full of the quality and promise of heart's desire. And there were many things and many people, some that still seem to stand out clearly and some that are vaguer ; but all these people were beautiful and kind. In some way—I don't know how—it was conveyed to me that they all were kind to me, glad to have me there, and filling me with gladness by their gestures, by the touch of their hands, by the welcome and love in their eyes. Yes——"

He mused for a while. "Playmates I found there. That was very much to me, because I was a lonely little boy. They played delightful games in a grass-covered court where there was a sun-dial set about with flowers. And as one played one loved. . . .

"But—it's odd—there's a gap in my memory. I don't remember the games we played. I never remembered. Afterwards, as a child, I spent long hours trying, even with tears, to recall the form of that happiness. I wanted to play it all over again—in my nursery—by myself. No ! All I remember is the happiness and two dear playfellows who were most with me. . . . Then presently came a sombre dark woman, with a grave, pale face and dreamy eyes, a sombre woman, wearing a soft long robe of pale purple, who carried a book, and beckoned and took me aside with her into a gallery above a hall—though my playmates were loth to have me go, and ceased their game and stood watching as I was carried away. 'Come back to us !' they cried. 'Come back to us soon !' I looked up at her face, but she heeded them not at all. Her face was very gentle and grave. She took me to a seat in the gallery, and I stood beside her, ready to look at her book as she opened it upon her knee. The pages fell open. She pointed, and I looked, marvelling, for in the living pages of that book I saw myself ; it was a story about myself, and in it were all the things that had happened to me since ever I was born. . . .

"It was wonderful to me, because the pages of that book were not pictures, you understand, but realities."

Wallace paused gravely—looked at me doubtfully.

"Go on," I said. "I understand."

"They were realities—yes, they must have been ; people moved and things came and went in them ; my dear mother, whom I had near forgotten ; then my father, stern and upright, the servants, the nursery, all the familiar things of home. Then the front door and the busy streets, with traffic to and fro. I looked and marvelled, and looked half doubtfully again into the woman's face and turned the pages over, skipping this

and that, to see more of this book and more, and so at last I came to myself hovering and hesitating outside the green door in the long white wall, and felt again the conflict and the fear.

" 'And next?' I cried, and would have turned on, but the cool hand of the grave woman delayed me.

" 'Next?' I insisted, and struggled gently with her hand, pulling up her fingers with all my childish strength, and as she yielded and the page came over she bent down upon me like a shadow and kissed my brow.

" But the page did not show the enchanted garden, nor the panthers, nor the girl who had led me by the hand, nor the playfellows who had been so loth to let me go. It showed a long grey street in West Kensington, in that chill hour of afternoon before the lamps are lit; and I was there, a wretched little figure, weeping aloud, for all that I could do to restrain myself, and I was weeping because I could not return to my dear playfellows who had called after me, 'Come back to us! Come back to us soon!' I was there. This was no page in a book, but harsh reality; that enchanted place and the restraining hand of the grave mother at whose knee I stood had gone—whither had they gone?"

He halted again, and remained for a time staring into the fire.

"Oh! the woefulness of that return!" he murmured.

"Well?" I said, after a minute or so.

"Poor little wretch I was!—brought back to this grey world again! As I realised the fulness of what had happened to me, I gave way to quite ungovernable grief. And the shame and humiliation of that public weeping and my disgraceful homecoming remain with me still. I see again the benevolent-looking old gentleman in gold spectacles who stopped and spoke to me—prodding me first with his umbrella. 'Poor little chap,' said he; 'and are you lost then?'—and me a London boy of five and more! And he must needs bring in a kindly young policeman and make a crowd of me, and so march me home. Sobbing, conspicuous, and frightened, I came back from the enchanted garden to the steps of my father's house.

"That is as well as I can remember my vision of that garden—the garden that haunts me still. Of course, I can convey nothing of that indescribable quality of translucent unreality, that *difference* from the common things of experience that hung about it all; but that—that is what happened. If it was a dream, I am sure it was a day-time and altogether extraordinary dream. . . . H'm!—naturally there followed a terrible questioning, by my aunt, my father, the nurse, the governess—every one. . . .

"I tried to tell them, and my father gave me my first thrashing for telling lies. When afterwards I tried to tell my aunt, she punished me again for my wicked persistence. Then, as I said, every one was forbidden to listen to me, to hear a word about it. Even my fairy-tale books were taken away from me

for a time—because I was too ‘imaginative.’ Eh ? Yes, they did that ! My father belonged to the old school. . . . And my story was driven back upon myself. I whispered it to my pillow—my pillow that was often damp and salt to my whispering lips with childish tears. And I added always to my official and less fervent prayers this one heartfelt request : ‘ Please God I may dream of the garden. Oh ! take me back to my garden ! Take me back to my garden ! ’ I dreamt often of the garden. I may have added to it, I may have changed it ; I do not know. . . . All this, you understand, is an attempt to reconstruct from fragmentary memories a very early experience. Between that and the other consecutive memories of my boyhood there is a gulf. A time came when it seemed impossible I should ever speak of that wonder glimpse again.”

I asked an obvious question.

“ No,” he said. “ I don’t remember that I ever attempted to find my way back to the garden in those early years. This seems odd to me now, but I think that very probably a closer watch was kept on my movements after this misadventure to prevent my going astray. No, it wasn’t till you knew me that I tried for the garden again. And I believe there was a period—incredible as it seems now—when I forgot the garden altogether—when I was about eight or nine it may have been. Do you remember me as a kid at Saint Athelstan’s ? ”

“ Rather ! ”

“ I didn’t show any signs, did I, in those days of having a secret dream ? ”

§ 2

He looked up with a sudden smile.

“ Did you ever play North-West Passage with me ? . . . No, of course you didn’t come my way ! ”

“ It was a sort of game,” he went on, “ that every imaginative child plays all day. The idea was the discovery of a North-West Passage to school. The way to school was plain enough ; the game consisted in finding some way that wasn’t plain, starting off ten minutes early in some almost hopeless direction, and working my way round through unaccustomed streets to my goal. And one day I got entangled among some rather low-class streets on the other side of Campden Hill, and I began to think that for once the game would be against me and that I should get to school late. I tried rather desperately a street that seemed a cul-de-sac, and found a passage at the end. I hurried through that with renewed hope. ‘ I shall do it yet,’ I said, and passed a row of frowsy little shops that were inexplicably familiar to me, and behold ! there was my long white wall and the green door that led to the enchanted garden ! ”

“ The thing whacked upon me suddenly. Then, after all, that garden, that wonderful garden, wasn’t a dream ! ”

He paused.

"I suppose my second experience with the green door marks the world of difference there is between the busy life of a school-boy and the infinite leisure of a child. Anyhow, this second time I didn't for a moment think of going in straight away. You see— For one thing, my mind was full of the idea of getting to school in time—set on not breaking my record for punctuality. I must surely have felt *some* little desire at least to try the door—yes. I must have felt that. . . . But I seem to remember the attraction of the door mainly as another obstacle to my overmastering determination to get to school. I was immensely interested by this discovery I had made, of course—I went on with my mind full of it—but I went on. It didn't check me. I ran past, tugging out my watch, found I had ten minutes still to spare, and then I was going downhill into familiar surroundings. I got to school, breathless, it is true, and wet with perspiration, but in time. I can remember hanging up my coat and hat. . . . Went right by it and left it behind me. Odd, eh?"

He looked at me thoughtfully. "Of course I didn't know then that it wouldn't always be there. Schoolboys have limited imaginations. I suppose I thought it was an awfully jolly thing to have it there, to know my way back to it; but there was the school tugging at me. I expect I was a good deal distraught and inattentive that morning, recalling what I could of the beautiful strange people I should presently see again. Oddly enough I had no doubt in my mind that they would be glad to see me. . . . Yes, I must have thought of the garden that morning just as a jolly sort of place to which one might resort in the interludes of a strenuous scholastic career.

"I didn't go that day at all. The next day was a half-holiday, and that may have weighed with me. Perhaps, too, my state of inattention brought down impositions upon me, and docked the margin of time necessary for the detour. I don't know. What I do know is that in the meantime the enchanted garden was so much upon my mind that I could not keep it to myself.

"I told—what was his name?—a ferrety-looking youngster we used to call Squiff."

"Young Hopkins," said I.

"Hopkins it was. I did not like telling him. I had a feeling that in some way it was against the rules to tell him, but I did. He was walking part of the way home with me; he was talkative, and if we had not talked about the enchanted garden we should have talked of something else, and it was intolerable to me to think about any other subject. So I blabbed.

"Well, he told my secret. The next day in the play interval I found myself surrounded by half a dozen bigger boys, half teasing, and wholly curious to hear more of the enchanted

garden. There was that big Fawcett—you remember him?—and Carnaby and Morley Reynolds. You weren't there by any chance? No, I think I should have remembered if you were. . . .

"A boy is a creature of odd feelings. I was, I really believe, in spite of my secret self-disgust, a little flattered to have the attention of these big fellows. I remember particularly a moment of pleasure caused by the praise of Crawshaw—you remember Crawshaw major, the son of Crawshaw the composer?—who said it was the best lie he had ever heard. But at the same time there was a really painful undertow of shame at telling what I felt was indeed a sacred secret. That beast Fawcett made a joke about the girl in green—"

Wallace's voice sank with the keen memory of that shame. "I pretended not to hear," he said. "Well, then Carnaby suddenly called me a young liar, and disputed with me when I said the thing was true. I said I knew where to find the green door, could lead them all there in ten minutes. Carnaby became outrageously virtuous, and said I'd have to—and bear out my words or suffer. Did you ever have Carnaby twist your arm? Then perhaps you'll understand how it went with me. I swore my story was true. There was nobody in the school then to save a chap from Carnaby, though Crawshaw put in a word or so. Carnaby had got his game. I grew excited and red-eared, and a little frightened. I behaved altogether like a silly little chap, and the outcome of it all was that instead of starting alone for my enchanted garden, I led the way presently—cheeks flushed, ears hot, eyes smarting, and my soul one burning misery and shame—for a party of six mocking, curious, and threatening schoolfellows.

"We never found the white wall and the green door. . . ."

"You mean—?"

"I mean I couldn't find it. I would have found it if I could.

"And afterwards when I could go alone I couldn't find it. I never found it. I seem now to have been always looking for it through my schoolboy days, but I never came upon it—never."

"Did the fellows—make it disagreeable?"

"Beastly. . . . Carnaby held a council over me for wanton lying. I remember how I sneaked home and upstairs to hide the marks of my blubbing. But when I cried myself to sleep at last it wasn't for Carnaby, but for the garden, for the beautiful afternoon I had hoped for, for the sweet friendly women and the waiting playfellows, and the game I had hoped to learn again, that beautiful forgotten game. . . ."

"I believe firmly that if I had not told— . . . I had bad times after that—crying at night and wool-gathering by day. For two terms I slacked and had bad reports. Do you remember? Of course you would! It was *you*—your beating me in mathematics that brought me back to the grind again."

§ 3

For a time my friend stared silently into the red heart of the fire. Then he said: "I never saw it again until I was seventeen.

"It leaped upon me for the third time—as I was driving to Paddington on my way to Oxford and a scholarship. I had just one momentary glimpse. I was leaning over the apron of my hansom smoking a cigarette, and no doubt thinking myself no end of a man of the world, and suddenly there was the door, the wall, the dear sense of unforgettable and still attainable things.

"We clattered by—I too taken by surprise to stop my cab until we were well past and round a corner. Then I had a queer moment, a double and divergent movement of my will: I tapped the little door in the roof of the cab, and brought my arm down to pull out my watch. 'Yes, sir!' said the cabman, smartly. 'Er—well—it's nothing,' I cried. 'My mistake! We haven't much time! Go on!' And he went on. . . .

"I got my scholarship. And the night after I was told of that, I sat over my fire in my little upper room, my study, in my father's house, with his praise—his rare praise—and his sound counsels ringing in my ears, and I smoked my favourite pipe—the formidable bulldog of adolescence—and thought of that door in the long white wall. 'If I had stopped,' I thought, 'I should have missed my scholarship, I should have missed Oxford—muddled all the fine career before me! I begin to see things better!' I fell musing deeply, but I did not doubt then this career of mine was a thing that merited sacrifice.

"Those dear friends and that clear atmosphere seemed very sweet to me, very fine but remote. My grip was fixing now upon the world. I saw another door opening—the door of my career."

He stared again into the fire. Its red light picked out a stubborn strength in his face for just one flickering moment, and then it vanished again.

"Well," he said and sighed, "I have served that career. I have done—much work, much hard work. But I have dreamt of the enchanted garden a thousand dreams, and seen its door, or at least glimpsed its door, four times since then. Yes—four times. For a while this world was so bright and interesting, seemed so full of meaning and opportunity, that the half-effaced charm of the garden was by comparison gentle and remote. Who wants to pat panthers on the way to dinner with pretty women and distinguished men? I came down to London from Oxford, a man of bold promise that I have done something to redeem. Something—and yet there have been disappointments. . . .

"Twice I have been in love—I will not dwell on that—but once, as I went to some one who, I knew, doubted whether I

dared to come, I took a short cut at a venture through an unfrequented road near Earl's Court, and so happened on a white wall and a familiar green door. 'Odd!' said I to myself, 'but I thought this place was on Campden Hill. It's the place I never could find, somehow—like counting Stonehenge—the place of that queer day-dream of mine.' And I went by it intent upon my purpose. It had no appeal to me that afternoon.

"I had just a moment's impulse to try the door, three steps aside were needed at the most—though I was sure enough in my heart that it would open to me—and then I thought that doing so might delay me on the way to that appointment in which my honour was involved. Afterwards I was sorry for my punctuality—I might at least have peeped in and waved a hand to those panthers, but I knew enough by this time not to seek again belatedly that which is not found by seeking. Yes, that time made me very sorry. . . .

"Years of hard work after that, and never a sight of the door. It's only recently it has come back to me. With it there has come a sense as though some thin tarnish had spread itself over my world. I began to think of it as a sorrowful and bitter thing that I should never see that door again. Perhaps I was suffering a little from overwork—perhaps it was what I've heard spoken of as the feeling of forty. I don't know. But certainly the keen brightness that makes effort easy has gone out of things recently, and that just at a time—with all these new political developments—when I ought to be working. Odd, isn't it? But I do begin to find life toilsome, its rewards, as I come near them, cheap. I began a little while ago to want the garden quite badly. Yes—and I've seen it three times."

"The garden?"

"No—the door! And I haven't gone in!"

He leaned over the table to me, with an enormous sorrow in his voice as he spoke. "Thrice I have had my chance—*thrice!* If ever that door offers itself to me again, I swore, I will go in, out of this dust and heat, out of this dry glitter of vanity, out of these toilsome futilities. I will go and never return. This time I will stay. . . . I swore it, and when the time came—I *didn't go*."

"Three times in one year have I passed that door and failed to enter. Three times in the last year."

"The first time was on the night of the snatch division on the Tenants' Redemption Bill, on which the Government was saved by a majority of three. You remember? No one on our side—perhaps very few on the opposite side—expected the end that night. Then the debate collapsed like eggshells. I and Hotchkiss were dining with his cousin at Brentford; we were both unpaired, and we were called up by telephone, and set off at once in his cousin's motor. We got in barely in time, and on the way we passed my wall and door—livid in the

moonlight, blotched with hot yellow as the glare of our lamps lit it, but unmistakable. 'My God!' cried I. 'What?' said Hotchkiss. 'Nothing!' I answered, and the moment passed.

"'I've made a great sacrifice,' I told the whip as I got in. 'They all have,' he said, and hurried by.

"I do not see how I could have done otherwise then. And the next occasion was as I rushed to my father's bedside to bid that stern old man farewell. Then, too, the claims of life were imperative. But the third time was different; it happened a week ago. It fills me with hot remorse to recall it. I was with Gurker and Ralphs—it's no secret now, you know, that I've had my talk with Gurker. We had been dining at Frobisher's, and the talk had become intimate between us. The question of my place in the reconstructed Ministry lay always just over the boundary of the discussion. Yes—yes. That's all settled. It needn't be talked about yet, but there's no reason to keep a secret from you. . . . Yes—thanks! thanks! But let me tell you my story.

"Then, on that night things were very much in the air. My position was a very delicate one. I was keenly anxious to get some definite word from Gurker, but was hampered by Ralphs' presence. I was using the best power of my brain to keep that light and careless talk not too obviously directed to the point that concerned me. I had to. Ralphs' behaviour since has more than justified my caution. . . . Ralphs, I knew, would leave us beyond the Kensington High Street, and then I could surprise Gurker by a sudden frankness. One has sometimes to resort to these little devices. . . . And then it was that in the margin of my field of vision I became aware once more of the white wall, the green door before us down the road.

"We passed it talking. I passed it. I can still see the shadow of Gurker's marked profile, his opera hat tilted forward over his prominent nose, the many folds of his neck wrap going before my shadow and Ralphs' as we sauntered past.

"I passed within twenty inches of the door. 'If I say good-night to them, and go in,' I asked myself, 'what will happen?' And I was all a-tingle for that word with Gurker.

"I could not answer that question in the tangle of my other problems. 'They will think me mad,' I thought. 'And suppose I vanish now!—Amazing disappearance of a prominent politician!' That weighed with me. A thousand inconceivably petty worldlinesses weighed with me in that crisis."

Then he turned on me with a sorrowful smile, and, speaking slowly, "Here I am!" he said.

"Here I am!" he repeated, "and my chance has gone from me. Three times in one year the door has been offered me—the door that goes into peace, into delight, into a beauty beyond dreaming, a kindness no man on earth can know. And I have rejected it, Redmond, and it has gone——"

"How do you know?"

"I know. I know. I am left now to work it out, to stick to the tasks that held me so strongly when my moments came. You say I have success—this vulgar, tawdry, irksome, envied thing. I have it." He had a walnut in his big hand. "If that was my success," he said, and crushed it, and held it out for me to see.

"Let me tell you something, Redmond. This loss is destroying me. For two months, for ten weeks nearly now, I have done no work at all, except the most necessary and urgent duties. My soul is full of inappeasable regrets. At nights—when it is less likely I shall be recognised—I go out. I wander. Yes. I wonder what people would think of that if they knew. A Cabinet Minister, the responsible head of that most vital of all departments, wandering alone—grieving—sometimes near audibly lamenting—for a door, for a garden ! "

§ 4

I can see now his rather pallid face, and the unfamiliar sombre fire that had come into his eyes. I see him very vividly to-night. I sit recalling his words, his tones, and last evening's *Westminster Gazette* still lies on my sofa, containing the notice of his death. At lunch to-day the club was busy with his death. We talked of nothing else.

They found his body very early yesterday morning in a deep excavation near East Kensington Station. It is one of two shafts that have been made in connection with an extension of the railway southward. It is protected from the intrusion of the public by a hoarding upon the high road, in which a small doorway has been cut for the convenience of some of the workmen who live in that direction. The doorway was left unfastened through a misunderstanding between two gangers, and through it he made his way.

My mind is darkened with questions and riddles.

It would seem he walked all the way from the House that night—he has frequently walked home during the past Session—and so it is I figure his dark form coming along the late and empty streets, wrapped up, intent. And then did the pale electric lights near the station cheat the rough planking into a semblance of white ? Did that fatal unfastened door awaken some memory ?

Was there, after all, ever any green door in the wall at all ?

I do not know. I have told his story as he told it to me. There are times when I believe that Wallace was no more than the victim of the coincidence between a rare but not unprecedented type of hallucination and a careless trap, but that indeed is not my profoundest belief. You may think me superstitious, if you will, and foolish ; but, indeed, I am more than half convinced that he had, in truth, an abnormal gift, and a sense, something—I know not what—that in the guise of wall and door offered him an outlet, a secret and peculiar passage

of escape into another and altogether more beautiful world. At any rate, you will say, it betrayed him in the end. But did it betray him? There you touch the inmost mystery of these dreamers, these men of vision and the imagination. We see our world fair and common, the hoarding and the pit. By our daylight standard he walked out of security into darkness, danger, and death.

But did he see like that?

STORY FIVE

THE FLOWERING OF THE STRANGE ORCHID

THE buying of orchids always has in it a certain speculative flavour. You have before you the brown shrivelled lump of tissue, and for the rest you must trust your judgment, or the auctioneer, or your good luck, as your taste may incline. The plant may be moribund or dead, or it may be just a respectable purchase, fair value for your money, or perhaps—for the thing has happened again and again—there slowly unfolds before the delighted eyes of the happy purchaser, day after day, some new variety, some novel richness, a strange twist of the labellum, or some subtler colouration or unexpected mimicry. Pride, beauty, and profit blossom together on one delicate green spike, and, it may be, even immortality. For the new miracle of Nature may stand in need of a new specific name, and what so convenient as that of its discoverer? "Johnsmithia"! There have been worse names.

It was perhaps the hope of some such happy discovery that made Winter-Wedderburn such a frequent attendant at these sales—that hope, and also, maybe, the fact that he had nothing else of the slightest interest to do in the world. He was a shy, lonely, rather ineffectual man, provided with just enough income to keep off the spur of necessity, and not enough nervous energy to make him seek any exacting employment. He might have collected stamps or coins, or translated Horace, or bound books, or invented new species of diatoms. But, as it happened, he grew orchids, and had one ambitious little hot-house.

"I have a fancy," he said over his coffee, "that something is going to happen to me to-day." He spoke—as he moved and thought—slowly.

"Oh, don't say *that*!" said his housekeeper—who was also his remote cousin. For "something happening" was a euphemism that meant only one thing to her.

"You misunderstand me. I mean nothing unpleasant . . . though what I do mean I scarcely know.

"To-day," he continued, after a pause, "Peters' are going to sell a batch of plants from the Andamans and the Indies. I shall go up and see what they have. It may be I shall buy something good, unawares. That may be it."

He passed his cup for his second cupful of coffee.

"Are those the things collected by that poor young fellow you told me of the other day?" asked his cousin as she filled his cup.

"Yes," he said, and became meditative over a piece of toast.

"Nothing ever does happen to me," he remarked presently, beginning to think aloud. "I wonder why? Things enough happen to other people. There is Harvey. Only the other

week—on Monday he picked up sixpence, on Wednesday his chicks all had the staggers, on Friday his cousin came home from Australia, and on Saturday he broke his ankle. What a whirl of excitement!—compared to me.”

“I think I would rather be without so much excitement,” said his housekeeper. “It can’t be good for you.”

“I suppose it’s troublesome. Still . . . you see, nothing ever happens to me. When I was a little boy I never had accidents. I never fell in love as I grew up. Never married. . . . I wonder how it feels to have something happen to you, something really remarkable.

“That orchid-collector was only thirty-six—twenty years younger than myself—when he died. And he had been married twice and divorced once; he had had malarial fever four times, and once he broke his thigh. He killed a Malay once, and once he was wounded by a poisoned dart. And in the end he was killed by jungle-leeches. It must have all been very troublesome, but then it must have been very interesting, you know—except, perhaps, the leeches.”

“I am sure it was not good for him,” said the lady, with conviction.

“Perhaps not.” And then Wedderburn looked at his watch. “Twenty-three minutes past eight. I am going up by the quarter-to-twelve train, so that there is plenty of time. I think I shall wear my alpaca jacket—it is quite warm enough—and my grey felt hat and brown shoes. I suppose—”

He glanced out of the window at the serene sky and sunlit garden, and then nervously at his cousin’s face.

“I think you had better take an umbrella if you are going to London,” she said in a voice that admitted of no denial. “There’s all between here and the station coming back.”

When he returned he was in a state of mild excitement. He had made a purchase. It was rare that he could make up his mind quickly enough to buy, but this time he had done so.

“There are Vandas,” he said, “and a Dendrobe and some Palæonophis.” He surveyed his purchases lovingly as he consumed his soup. They were laid out on the spotless tablecloth before him, and he was telling his cousin all about them as he slowly meandered through his dinner. It was his custom to live all his visits to London over again in the evening for her and his own entertainment.

“I knew something would happen to-day. And I have bought all these. Some of them—some of them—I feel sure, do you know, that some of them will be remarkable. I don’t know how it is, but I feel just as sure as if some one had told me that some of these will turn out remarkable.

“That one”—he pointed to a shrivelled rhizome—“was not identified. It may be a Palæonophis—or it may not. It may be a new species, or even a new genus. And it was the last that poor Batten ever collected.”

"I don't like the look of it," said his housekeeper. "It's such an ugly shape."

"To me it scarcely seems to have a shape."

"I don't like those things that stick out," said his housekeeper.

"It shall be put away in a pot to-morrow."

"It looks," said the housekeeper, "like a spider shamming dead."

Wedderburn smiled and surveyed the root with his head on one side. "It is certainly not a pretty lump of stuff. But you can never judge of these things from their dry appearance. It may turn out to be a very beautiful orchid indeed. How busy I shall be to-morrow! I must see to-night just exactly what to do with these things, and to-morrow I shall set to work."

"They found poor Batten lying dead, or dying, in a mangrove swamp—I forget which," he began again presently, "with one of these very orchids crushed up under his body. He had been unwell for some days with some kind of native fever, and I suppose he fainted. These mangrove swamps are very unwholesome. Every drop of blood, they say, was taken out of him by the jungle-leeches. It may be that very plant that cost him his life to obtain."

I think none the better of it for that."

"Men must work though women may weep," said Wedderburn with profound gravity.

"Fancy dying away from every comfort in a nasty swamp! Fancy being ill of fever with nothing to take but chlorodyne and quinine—if men were left to themselves they would live on chlorodyne and quinine—and no one round you but horrible natives! They say the Andaman islanders are most disgusting wretches—and, anyhow, they can scarcely make good nurses, not having the necessary training. And just for people in England to have orchids!"

"I don't suppose it was comfortable, but some men seem to enjoy that kind of thing," said Wedderburn. "Anyhow, the natives of his party were sufficiently civilised to take care of all his collection until his colleague, who was an ornithologist, came back again from the interior; though they could not tell the species of the orchid and had let it wither. And it makes these things more interesting."

"It makes them disgusting. I should be afraid of some of the malaria clinging to them. And just think, there has been a dead body lying across that ugly thing! I never thought of that before. There! I declare I cannot eat another mouthful of dinner."

"I will take them off the table if you like, and put them in the window-seat. I can see them just as well there."

The next few days he was indeed singularly busy in his steamy little hot-house, fussing about with charcoal, lumps of teak, moss, and all the other mysteries of the orchid cultivator.

He considered he was having a wonderfully eventful time. In the evening he would talk about these new orchids to his friends, and over and over again he reverted to his expectation of something strange.

Several of the Vandas and the Dendrobium died under his care, but presently the strange orchid began to show signs of life. He was delighted and took his housekeeper right away from jam-making to see it at once, directly he made the discovery.

"That is a bud," he said, "and presently there will be a lot of leaves there, and those little things coming out here are aerial rootlets."

"They look to me like little white fingers poking out of the brown," said his housekeeper. "I don't like them."

"Why not?"

"I don't know. They look like fingers trying to get at you. I can't help my likes and dislikes."

"I don't know for certain, but I don't *think* there are any orchids I know that have aerial rootlets quite like that. It may be my fancy, of course. You see they are a little flattened at the ends."

"I don't like 'em," said his housekeeper, suddenly shivering and turning away. "I know it's very silly of me—and I'm very sorry, particularly as you like the thing so much. But I can't help thinking of that corpse."

"But it may not be that particular plant. That was merely a guess of mine."

His housekeeper shrugged her shoulders. "Anyhow I don't like it," she said.

Wedderburn felt a little hurt at her dislike to the plant. But that did not prevent his talking to her about orchids generally, and this orchid in particular, whenever he felt inclined.

"There are such queer things about orchids," he said one day; "such possibilities of surprises. You know, Darwin studied their fertilisation, and showed that the whole structure of an ordinary orchid-flower was contrived in order that moths might carry the pollen from plant to plant. Well, it seems that there are lots of orchids known the flower of which cannot possibly be used for fertilisation in that way. Some of the *Cypripediums*, for instance; there are no insects known that can possibly fertilise them, and some of them have never been found with seed."

"But how do they form new plants?"

"By runners and tubers, and that kind of outgrowth. That is easily explained. The puzzle is, what are the flowers for?"

"Very likely," he added, "*my* orchid may be something extraordinary in that way. If so I shall study it. I have often thought of making researches as Darwin did. But hitherto I have not found the time, or something else has

happened to prevent it. The leaves are beginning to unfold now. I do wish you would come and see them!"

But she said that the orchid-house was so hot it gave her the headache. She had seen the plant once again, and the aerial rootlets, which were now some of them more than a foot long, had unfortunately reminded her of tentacles reaching out after something; and they got into her dreams, growing after her with incredible rapidity. So that she had settled to her entire satisfaction that she would not see that plant again, and Wedderburn had to admire its leaves alone. They were of the ordinary broad form, and a deep glossy green, with splashes and dots of deep red towards the base. He knew of no other leaves quite like them. The plant was placed on a low bench near the thermometer, and close by was a simple arrangement by which a tap dripped on the hot-water pipes and kept the air steamy. And he spent his afternoons now with some regularity meditating on the approaching flowering of this strange plant.

And at last the great thing happened. Directly he entered the little glass house he knew that the spike had burst out, although his great *Palæonophis Lowii* hid the corner where his new darling stood. There was a new odour in the air, a rich, intensely sweet scent, that overpowered every other in that crowded, steaming little greenhouse.

Directly he noticed this he hurried down to the strange orchid. And, behold! the trailing green spikes bore now three great splashes of blossom, from which this overpowering sweetness proceeded. He stopped before them in an ecstasy of admiration.

The flowers were white, with streaks of golden orange upon the petals; the heavy labellum was coiled into an intricate projection, and a wonderful bluish purple mingled there with the gold. He could see at once that the genus was altogether a new one. And the insufferable scent! How hot the place was! The blossoms swam before his eyes.

He would see if the temperature was right. He made a step towards the thermometer. Suddenly everything appeared unsteady. The bricks on the floor were dancing up and down. Then the white blossoms, the green leaves behind them, the whole greenhouse, seemed to sweep sideways, and then in a curve upward.

At half-past four his cousin made the tea, according to their invariable custom. But Wedderburn did not come in for his tea.

"He is worshipping that horrid orchid," she told herself, and waited ten minutes. "His watch must have stopped. I will go and call him."

She went straight to the hot-house, and, opening the door, called his name. There was no reply. She noticed that the air was very close, and loaded with an intense perfume. Then

she saw something lying on the bricks between the hot-water pipes.

For a minute, perhaps, she stood motionless.

He was lying, face upward, at the foot of the strange orchid. The tentacle-like aerial rootlets no longer swayed freely in the air, but were crowded together, a tangle of grey ropes, and stretched tight with their ends closely applied to his chin and neck and hands.

She did not understand. Then she saw from under one of the exultant tentacles upon his cheek there trickled a little thread of blood.

With an inarticulate cry she ran towards him, and tried to pull him away from the leech-like suckers. She snapped two of these tentacles, and their sap dripped red.

Then the overpowering scent of the blossom began to make her head reel. How they clung to him ! She tore at the tough ropes, and he and the white inflorescence swam about her. She felt she was fainting, knew she must not. She left him and hastily opened the nearest door, and, after she had panted for a moment in the fresh air, she had a brilliant inspiration. She caught up a flower-pot and smashed in the windows at the end of the greenhouse. Then she re-entered. She tugged now with renewed strength at Wedderburn's motionless body, and brought the strange orchid crashing to the floor. It still clung with the grimmest tenacity to its victim. In a frenzy, she lugged it and him into the open air.

Then she thought of tearing through the sucker rootlets one by one, and in another minute she had released him and was dragging him away from the horror.

He was white and bleeding from a dozen circular patches.

The odd-job man was coming up the garden, amazed at the smashing of glass, and saw her emerge, hauling the inanimate body with red-stained hands. For a moment he thought impossible things.

"Bring some water !" she cried, and her voice dispelled his fancies. When, with unnatural alacrity, he returned with the water, he found her weeping with excitement, and with Wedderburn's head upon her knee, wiping the blood from his face.

"What's the matter ?" said Wedderburn, opening his eyes feebly, and closing them again at once.

"Go and tell Annie to come out here to me, and then go for Doctor Haddon at once," she said to the odd-job man so soon as he brought the water ; and added, seeing he hesitated, "I will tell you all about it, when you come back."

Presently Wedderburn opened his eyes again, and, seeing that he was troubled by the puzzle of his position, she explained to him, "You fainted in the hot-house."

"And the orchid ?"

"I will see to that," she said.

Wedderburn had lost a good deal of blood, but beyond that

he had suffered no very great injury. They gave him brandy mixed with some pink extract of meat, and carried him upstairs to bed. His housekeeper told her incredible story in fragments to Dr. Haddon. "Come to the orchid-house and see," she said.

The cold outer air was blowing in through the open door, and the sickly perfume was almost dispelled. Most of the torn aerial rootlets lay already withered amidst a number of dark stains upon the bricks. The stem of the inflorescence was broken by the fall of the plant, and the flowers were growing limp and brown at the edges of the petals. The doctor stooped towards it, then saw that one of the aerial rootlets still stirred feebly, and hesitated.

The next morning the strange orchid still lay there, black now and putrescent. The door banged intermittently in the morning breeze, and all the array of Wedderburn's orchids was shrivelled and prostrate. But Wedderburn himself was bright and garrulous upstairs in the glory of his strange adventure.

STORY SIX

IN THE AVU OBSERVATORY

THE observatory at Avu, in Borneo, stands on the spur of the mountain. To the north rises the old crater, black at night against the unfathomable blue of the sky. From the little circular building, with its mushroom dome, the slopes plunge steeply downward into the black mysteries of the tropical forest beneath. The little house in which the observer and his assistant live is about fifty yards from the observatory, and beyond this are the huts of their native attendants.

Thaddy, the chief observer, was down with a slight fever. His assistant, Woodhouse, paused for a moment in silent contemplation of the tropical night before commencing his solitary vigil. The night was very still. Now and then voices and laughter came from the native huts, or the cry of some strange animal was heard from the midst of the mystery of the forest. Nocturnal insects appeared in ghostly fashion out of the darkness, and fluttered round his light. He thought, perhaps, of all the possibilities of discovery that still lay in the black tangle beneath him; for to the naturalist the virgin forests of Borneo are still a wonderland full of strange questions and half-suspected discoveries. Woodhouse carried a small lantern in his hand, and its yellow glow contrasted vividly with the infinite series of tints between lavender-blue and black in which the landscape was painted. His hands and face were smeared with ointment against the attacks of the mosquitoes.

Even in these days of celestial photography, work done in a purely temporary erection, and with only the most primitive appliances in addition to the telescope, still involves a very large amount of cramped and motionless watching. He sighed as he thought of the physical fatigues before him, stretched himself, and entered the observatory.

The reader is probably familiar with the structure of an ordinary astronomical observatory. The building is usually cylindrical in shape, with a very light hemispherical roof capable of being turned round from the interior. The telescope is supported upon a stone pillar in the centre, and a clockwork arrangement compensates for the earth's rotation, and allows a star once found to be continuously observed. Besides this, there is a compact tracery of wheels and screws about its point of support, by which the astronomer adjusts it. There is, of course, a slit in the movable roof which follows the eye of the telescope in its survey of the heavens. The observer sits or lies on a sloping wooden arrangement, which he can wheel to any part of the observatory as the position of the telescope may require. Within it is advisable to have things

as dark as possible, in order to enhance the brilliance of the stars observed.

The lantern flared as Woodhouse entered his circular den, and the general darkness fled into black shadows behind the big machine, from which it presently seemed to creep back over the whole place again as the light waned. The slit was a profound transparent blue, in which six stars shone with tropical brilliance, and their light lay, a pallid gleam, along the black tube of the instrument. Woodhouse shifted the roof, and then proceeding to the telescope, turned first one wheel and then another, the great cylinder slowly swinging into a new position. Then he glanced through the finder, the little companion telescope, moved the roof a little more, made some further adjustments, and set the clockwork in motion. He took off his jacket, for the night was very hot, and pushed into position the uncomfortable seat to which he was condemned for the next four hours. Then with a sigh he resigned himself to his watch upon the mysteries of space.

There was no sound now in the observatory, and the lantern waned steadily. Outside there was the occasional cry of some animal in alarm or pain, or calling to its mate, and the intermittent sounds of the Malay and Dyak servants. Presently one of the men began a queer chanting song, in which the others joined at intervals. After this it would seem that they turned in for the night, for no further sound came from their direction, and the whispering stillness became more and more profound.

The clockwork ticked steadily. The shrill hum of a mosquito explored the place and grew shriller in indignation at Woodhouse's ointment. Then the lantern went out and all the observatory was black.

Woodhouse shifted his position presently, when the slow movement of the telescope had carried it beyond the limits of his comfort.

He was watching a little group of stars in the Milky Way, in one of which his chief had seen or fancied a remarkable colour variability. It was not a part of the regular work for which the establishment existed, and for that reason perhaps Woodhouse was deeply interested. He must have forgotten things terrestrial. All his attention was concentrated upon the great blue circle of the telescope field—a circle powdered, so it seemed, with an innumerable multitude of stars, and all luminous against the blackness of its setting. As he watched he seemed to himself to become incorporeal, as if he too were floating in the ether of space. Infinitely remote was the faint red spot he was observing.

Suddenly the stars were blotted out. A flash of blackness passed, and they were visible again.

"Queer," said Woodhouse. "Must have been a bird."

The thing happened again, and immediately after the great

tube shivered as though it had been struck. Then the dome of the observatory resounded with a series of thundering blows. The stars seemed to sweep aside as the telescope—which had been unclamped—swung round and away from the slit in the roof.

"Great Scott!" cried Woodhouse. "What's this?"

Some huge vague black shape, with a flapping something like a wing, seemed to be struggling in the aperture of the roof. In another moment the slit was clear again, and the luminous haze of the Milky Way shone warm and bright.

The interior of the roof was perfectly black, and only a scraping sound marked the whereabouts of the unknown creature.

Woodhouse had scrambled from the seat to his feet. He was trembling violently and in a perspiration with the suddenness of the occurrence. Was the thing, whatever it was, inside or out? It was big, whatever else it might be. Something shot across the skylight, and the telescope swayed. He started violently and put his arm up. It was in the observatory, then, with him. It was clinging to the roof, apparently. What the devil was it? Could it see him?

He stood for perhaps a minute in a state of stupefaction. The beast, whatever it was, clawed at the interior of the dome, and then something flapped almost into his face, and he saw the momentary gleam of starlight on a skin like oiled leather. His water-bottle was knocked off his little table with a smash.

The sense of some strange bird-creature hovering a few yards from his face in the darkness was indescribably unpleasant to Woodhouse. As his thought returned he concluded that it must be some night-bird or large bat. At any risk he would see what it was, and pulling a match from his pocket, he tried to strike it on the telescope seat. There was a smoking streak of phosphorescent light, the match flared for a moment, and he saw a vast wing sweeping towards him, a gleam of grey-brown fur, and then he was struck in the face and the match knocked out of his hand. The blow was aimed at his temple, and a claw tore sideways down to his cheek. He reeled and fell, and he heard the extinguished lantern smash. Another blow followed as he fell. He was partly stunned, he felt his own warm blood stream out upon his face. Instinctively he felt his eyes had been struck at, and, turning over on his face to protect them, tried to crawl under the protection of the telescope.

He was struck again upon the back, and he heard his jacket rip, and then the thing hit the roof of the observatory. He edged as far as he could between the wooden seat and the eyepiece of the instrument, and turned his body round so that it was chiefly his feet that were exposed. With these he could at least kick. He was still in a mystified state. The strange beast banged about in the darkness, and presently clung to the

telescope, making it sway and the gear rattle. Once it flapped near him, and he kicked out madly and felt a soft body with his feet. He was horribly scared now. It must be a big thing to swing the telescope like that. He saw for a moment the outline of a head black against the starlight, with sharply-pointed upstanding ears and a crest between them. It seemed to him to be as big as a mastiff's. Then he began to bawl out as loudly as he could for help.

At that the thing came down upon him again. As it did so his hand touched something beside him on the floor. He kicked out, and the next moment his ankle was gripped and held by a row of keen teeth. He yelled again, and tried to free his leg by kicking with the other. Then he realised he had the broken water-bottle at his hand, and, snatching it, he struggled into a sitting posture, and feeling in the darkness towards his foot, gripped a velvety ear, like the ear of a big cat. He had seized the water-bottle by its neck and brought it down with a shivering crash upon the head of the strange beast. He repeated the blow, and then stabbed and jobbed with the jagged end of it, in the darkness, where he judged the face might be.

The small teeth relaxed their hold, and at once Woodhouse pulled his leg free and kicked hard. He felt the sickening feel of fur and bone giving under his boot. There was a tearing bite at his arm, and he struck over it at the face, as he judged, and hit damp fur.

There was a pause ; then he heard the sound of claws and the dragging of a heavy body away from him over the observatory floor. Then there was silence, broken only by his own sobbing breathing, and a sound like licking. Everything was black except the parallelogram of the blue skylight with the luminous dust of stars, against which the end of the telescope now appeared in silhouette. He waited, as it seemed, an interminable time.

Was the thing coming on again ? He felt in his trouser-pocket for some matches, and found one remaining. He tried to strike this, but the floor was wet, and it spat and went out. He cursed. He could not see where the door was situated. In his struggle he had quite lost his bearings. The strange beast, disturbed by the splutter of the match, began to move again. "Time!" called Woodhouse, with a sudden gleam of mirth, but the thing was not coming at him again. He must have hurt it, he thought, with the broken bottle. He felt a dull pain in his ankle. Probably he was bleeding there. He wondered if it would support him if he tried to stand up. The night outside was very still. There was no sound of any one moving. The sleepy fools had not heard those wings battering upon the dome, nor his shouts. It was no good wasting strength in shouting. The monster flapped its wings and startled him into a defensive attitude. He hit his elbow

against the seat, and it fell over with a crash. He cursed this, and then he cursed the darkness.

Suddenly the oblong patch of starlight seemed to sway to and fro. Was he going to faint? It would never do to faint. He clenched his fists and set his teeth to hold himself together. Where had the door got to? It occurred to him he could get his bearings by the stars visible through the skylight. The patch of stars he saw was in Sagittarius and south-eastward; the door was north—or was it north by west? He tried to think. If he could get the door open he might retreat. It might be the thing was wounded. The suspense was beastly. "Look here!" he said, "if you don't come on, I shall come at you."

Then the thing began clambering up the side of the observatory, and he saw its black outline gradually blot out the skylight. Was it in retreat? He forgot about the door, and watched as the dome shifted and creaked. Somehow he did not feel very frightened or excited now. He felt a curious sinking sensation inside him. The sharply-defined patch of light, with the black form moving across it, seemed to be growing smaller and smaller. That was curious. He began to feel very thirsty, and yet he did not feel inclined to get anything to drink. He seemed to be sliding down a long funnel.

He felt a burning sensation in his throat, and then he perceived it was broad daylight, and that one of the Dyak servants was looking at him with a curious expression. Then there was the top of Thaddy's face upside down. Funny fellow, Thaddy, to go about like that! Then he grasped the situation better, and perceived that his head was on Thaddy's knee, and Thaddy was giving him brandy. And then he saw the eyepiece of the telescope with a lot of red smears on it. He began to remember.

"You've made this observatory in a pretty mess," said Thaddy.

The Dyak boy was beating up an egg in brandy. Woodhouse took this and sat up. He felt a sharp twinge of pain. His ankle was tied up, so were his arm and the side of his face. The smashed glass, red-stained, lay about the floor, the telescope seat was overturned, and by the opposite wall was a dark pool. The door was open, and he saw the grey summit of the mountain against a brilliant background of blue sky.

"Pah!" said Woodhouse. "Who's been killing calves here? Take me out of it."

Then he remembered the Thing, and the fight he had had with it.

"What *was* it?" he said to Thaddy—"The Thing I fought with?"

"You know that best," said Thaddy. "But, anyhow, don't worry yourself now about it. Have some more to drink."

Thaddy, however, was curious enough, and it was a hard struggle between duty and inclination to keep Woodhouse

quiet until he was decently put away in bed, and had slept upon the copious dose of meat-extract Thaddy considered advisable. They then talked it over together.

"It was," said Woodhouse, "more like a big bat than anything else in the world. It had sharp, short ears, and soft fur, and its wings were leathery. Its teeth were little, but devilish sharp, and its jaw could not have been very strong or else it would have bitten through my ankle."

"It has pretty nearly," said Thaddy.

"It seemed to me to hit out with its claws pretty freely. That is about as much as I know about the beast. Our conversation was intimate, so to speak, and yet not confidential."

"The Dyak chaps talk about a Big Colugo, a Klangutang—whatever that may be. It does not often attack man, but I suppose you made it nervous. They say there is a Big Colugo and a Little Colugo, and a something else that sounds like gobble. They all fly about at night. For my own part I know there are flying foxes and flying lemurs about here, but they are none of them very big beasts."

"There are more things in heaven and earth," said Woodhouse—and Thaddy groaned at the quotation—"and more particularly in the forests of Borneo, than are dreamt of in our philosophies. On the whole, if the Borneo fauna is going to disgorge any more of its novelties upon me, I should prefer that it did so when I was not occupied in the observatory at night and alone."

STORY SEVEN

THE TRIUMPHS OF A TAXIDERMIST

HERE are some of the secrets of taxidermy. They were told me by the taxidermist in a mood of elation. He told me them in the time between the first glass of whisky and the fourth, when a man is no longer cautious and yet not drunk. We sat in his den together ; his library it was, his sitting and his eating-room—separated by a bead curtain, so far as the sense of sight went, from the noisome den where he plied his trade.

He sat on a deck-chair, and when he was not tapping refractory bits of coal with them, he kept his feet—on which he wore, after the manner of sandals, the holy relics of a pair of carpet slippers—out of the way upon the mantelpiece, among the glass eyes. And his trousers, by the bye—though they have nothing to do with his triumphs—were a most horrible yellow plaid, such as they made when our fathers wore side-whiskers and there were crinolines in the land. Further, his hair was black, his face rosy, and his eye a fiery brown ; and his coat was chiefly of grease upon a basis of velveteen. And his pipe had a bowl of china showing the Graces, and his spectacles were always askew, the left eye glaring nakedly at you, small and penetrating ; the right, seen through a glass darkly, magnified and mild. Thus his discourse ran : “ There never was a man who could stuff like me, Bellows, never. I have stuffed elephants and I have stuffed moths, and the things have looked all the livelier and better for it. And I have stuffed human beings—chiefly amateur ornithologists. But I stuffed a nigger once.

“ No, there is no law against it. I made him with all his fingers out and used him as a hat-rack, but that fool Homersby got up a quarrel with him late one night and spoilt him. That was before your time. It is hard to get skins, or I would have another.

“ Unpleasant ? I don’t see it. Seems to me taxidermy is a promising third course to burial or cremation. You could keep all your dear ones by you. Bric-à-brac of that sort stuck about the house would be as good as most company, and much less expensive. You might have them fitted up with clockwork to do things.

“ Of course they would have to be varnished, but they need not shine more than lots of people do naturally. Old Manning-tree’s bald head. . . . Anyhow, you could talk to them without interruption. Even aunts. There is a great future before taxidermy, depend upon it. There is fossils again. . . .”

He suddenly became silent.

“ No, I don’t think I ought to tell you that.” He sucked at

his pipe thoughtfully. "Thanks, yes. Not too much water.

"Of course, what I tell you now will go no further. You know I have made some dodos and a great auk? No! Evidently you are an amateur at taxidermy. My dear fellow, half the great auks in the world are about as genuine as the handkerchief of Saint Veronica, as the Holy Coat of Treves. We make 'em of grebes' feathers and the like. And the great auk's eggs too!"

"Good heavens!"

"Yes, we make them out of fine porcelain. I tell you it is worth while. They fetch—one fetched £300 only the other day. That one was really genuine, I believe, but of course one is never certain. It is very fine work, and afterwards you have to get them dusty, for no one who owns one of these precious eggs has ever the temerity to clean the thing. That's the beauty of the business. Even if they suspect an egg they do not like to examine it too closely. It's such brittle capital at the best.

"You did not know that taxidermy rose to heights like that. My boy, it has risen higher. I have rivalled the hands of Nature herself. One of the *genuine* great auks"—his voice fell to a whisper—"one of the *genuine* great auks *was made by me*."

"No. You must study ornithology, and find out which it is yourself. And what is more, I have been approached by a syndicate of dealers to stock one of the unexplored skerries to the north of Iceland with specimens. I may—some day. But I have another little thing in hand just now. Ever heard of the *dinornis*?"

"It is one of those big birds recently extinct in New Zealand. 'Moa,' is its common name, so called because extinct: there is no moa now. See? Well, they have got bones of it, and from some of the marshes even feathers and dried bits of skin. Now, I am going to—well, there is no need to make any bones about it—going to *forge* a complete stuffed moa. I know a chap out there who will pretend to make the find in a kind of antiseptic swamp, and say he stuffed it at once, as it threatened to fall to pieces. The feathers are peculiar, but I have got a simply lovely way of dodging up singed bits of ostrich plume. Yes, that is the new smell you noticed. They can only discover the fraud with a microscope, and they will hardly care to pull a nice specimen to bits for that.

"In this way, you see, I give my little push in the advancement of science.

"But all this is merely imitating Nature. I have done more than that in my time. I have—beaten her."

He took his feet down from the mantel-board, and leant over confidentially towards me. "I have *created* birds," he said in a low voice. "*New* birds. Improvements. Like no birds that was ever seen before."

He resumed his attitude during an impressive silence.

"Enrich the universe; *rath-er*. Some of the birds I made were new kinds of humming birds, and very beautiful little things, but some of them were simply rum. The rummest, I think, was the *Anomalopteryx Jejunus*. *Jejunus-a-um*—empty—so called because there was really nothing in it; a thoroughly empty bird—except for stuffing. Old Javvers has the thing now, and I suppose he is almost as proud of it as I am. It is a masterpiece, Bellows. It has all the silly clumsiness of your pelican, all the solemn want of dignity of your parrot, all the gaunt ungainliness of a flamingo, with all the extravagant chromatic conflict of a mandarin duck. *Such a bird*. I made it out of the skeletons of a stork and a toucan and a job lot of feathers. Taxidermy of that kind is just pure joy, Bellows, to a real artist in the art.

"How did I come to make it? Simple enough, as all great inventions are. One of those young geni who write us Science Notes in the papers got hold of a German pamphlet about the birds of New Zealand, and translated some of it by means of a dictionary and his mother-wit—he must have been one of a very large family with a small mother—and he got mixed between the living apteryx and the extinct anomal-opteryx; talked about a bird five feet high, living in the jungles of the North Island, rare, shy, specimens difficult to obtain, and so on. Javvers, who even for a collector is a miraculously ignorant man, read these paragraphs, and swore he would have the thing at any price. Raided the dealers with inquiries. It shows what a man can do by persistence—will-power. Here was a bird-collector swearing he would have a specimen of a bird that did not exist, that never had existed, and which for very shame of its own profane ungainliness, probably would not exist now if it could help itself. And he got it. *He got it.*"

"Have some more whisky, Bellows?" said the taxidermist, rousing himself from a transient contemplation of the mysteries of will-power and the collecting turn of mind. And, replenished, he proceeded to tell me of how he concocted a most attractive mermaid, and how an itinerant preacher, who could not get an audience because of it, smashed it because it was idolatry, or worse, at Burslem Wakes. But as the conversation of all the parties to this transaction, creator, would-be preserver, and destroyer, was uniformly unfit for publication, this cheerful incident must still remain unprinted.

The reader unacquainted with the dark ways of the collector may perhaps be inclined to doubt my taxidermist, but so far as great auk's eggs, and the bogus stuffed birds are concerned, I find that he has the confirmation of distinguished ornithological writers. And the note about the New Zealand bird certainly appeared in a morning paper of unblemished reputation, for the taxidermist keeps a copy and has shown it to me.

STORY EIGHT

A DEAL IN OSTRICHES

"**T**ALKING of the prices of birds, I've seen an ostrich that cost three hundred pounds," said the taxidermist, recalling his youth of travel. "Three hundred pounds!"

He looked at me over his spectacles. "I've seen another that was refused at four."

"No," he said, "it wasn't any fancy points. They was just plain ostriches. A little off colour, too—owing to dietary. And there wasn't any particular restriction of the demand either. You'd have thought five ostriches would have ruled cheap on an East Indiaman. But the point was, one of 'em had swallowed a diamond."

"The chap it got it off was Sir Mohini Padishah, a tremendous swell, a Piccadilly swell you might say up to the neck of him, and then an ugly black head and a whopping turban, with this diamond in it. The blessed bird pecked suddenly and had it, and when the chap made a fuss it realised it had done wrong, I suppose, and went and mixed itself with the others to preserve its *incog*. It all happened in a minute. I was among the first to arrive, and there was this heathen going over his gods, and two sailors and the man who had charge of the birds laughing fit to split. It was a rummy way of losing a jewel, come to think of it. The man in charge hadn't been about just at the moment, so that he didn't know which bird it was. Clean lost, you see. I didn't feel half sorry, to tell you the truth. The beggar had been swaggering over his blessed diamond ever since he came aboard."

"A thing like that goes from stem to stern of a ship in no time. Every one was talking about it. Padishah went below to hide his feelings. At dinner—he pigged at a table by himself, him and two other Hindoos—the captain kind of jeered at him about it, and he got very excited. He turned round and talked into my ear. He would not buy the birds; he would have his diamond. He demanded his rights as a British subject. His diamond must be found. He was firm upon that. He would appeal to the House of Lords. The man in charge of the birds was one of those wooden-headed chaps you can't get a new idea into anyhow. He refused any proposal to interfere with the birds by way of medicine. His instructions were to feed them so-and-so and treat them so-and-so, and it was as much as his place was worth not to feed them so-and-so and treat them so-and-so. Padishah had wanted a stomach-pump—though you can't do that to a bird, you know. This Padishah was full of bad law, like most of these blessed Bengalis, and talked of having a lien on the birds, and so forth."

But an old boy, who said his son was a London barrister, argued that what a bird swallowed became *ipso facto* part of the bird, and that Padishah's only remedy lay in an action for damages, and even then it might be possible to show contributory negligence. He hadn't any right of way about an ostrich that didn't belong to him. That upset Padishah extremely, the more so as most of us expressed an opinion that that was the reasonable view. There wasn't any lawyer aboard to settle the matter, so we all talked pretty free. At last, after Aden, it appears that he came round to the general opinion, and went privately to the man in charge and made an offer for all five ostriches.

"The next morning there was a fine shindy at breakfast. The man hadn't any authority to deal with the birds, and nothing on earth would induce him to sell; but it seems he told Padishah that a Eurasian named Potter had already made him an offer, and on that Padishah denounced Potter before us all. But I think the most of us thought it rather smart of Potter, and I know that when Potter said that he'd wired at Aden to London to buy the birds, and would have an answer at Suez, I cursed pretty richly at a lost opportunity.

"At Suez, Padishah gave way to tears—actual wet tears—when Potter became the owner of the birds, and offered him two hundred and fifty right off for the five, being more than two hundred per cent. on what Potter had given. Potter said he'd be hanged if he parted with a feather of them—that he meant to kill them off one by one and find the diamond; but afterwards, thinking it over, he relented a little. He was a gambling hound, was this Potter, a little queer at cards, and this kind of prize-packet business must have suited him down to the ground. Anyhow, he offered, for a lark, to sell the birds separately to separate people by auction at a starting price of £80 for a bird. But one of them, he said, he meant to keep for luck.

"You must understand this diamond was a valuable one—a little Jew chap, a diamond merchant, who was with us, had put it at three or four thousand when Padishah had shown it to him—and this idea of an ostrich gamble caught on. Now it happened that I'd been having a few talks on general subjects with the man who looked after these ostriches, and quite incidentally he'd said one of the birds was ailing, and he fancied it had indigestion. It had one feather in its tail almost all white, by which I knew it, and so when, next day, the auction started with it, I capped Padishah's eighty-five by ninety. I fancy I was a bit too sure and eager with my bid, and some of the others spotted the fact that I was in the know. And Padishah went for that particular bird like an irresponsible lunatic. At last the Jew diamond merchant got it for £175, and Padishah said £180 just after the hammer came down—so Potter declared. At any rate the Jew merchant secured it, and there

and then he got a gun and shot it. Potter made a Hades of a fuss because he said it would injure the sale of the other three, and Padishah, of course, behaved like an idiot ; but all of us were very much excited. I can tell you I was precious glad when that dissection was over, and no diamond had turned up—precious glad. I'd gone to one-forty on that particular bird myself.

"The little Jew was like most Jews—he didn't make any great fuss over bad luck ; but Potter declined to go on with the auction until it was understood that the goods could not be delivered until the sale was over. The little Jew wanted to argue that the case was exceptional, and as the discussion ran pretty even, the thing was postponed until the next morning. We had a lively dinner-table that evening, I can tell you, but in the end Potter got his way, since it would stand to reason he would be safer if he stuck to all the birds, and that we owed him some consideration for his sportsmanlike behaviour. And the old gentleman whose son was a lawyer said he'd been thinking the thing over and that it was very doubtful if, when a bird had been opened and the diamond recovered, it ought not to be handed back to the proper owner. I remember I suggested it came under the laws of treasure-trove—which was really the truth of the matter. There was a hot argument, and we settled it was certainly foolish to kill the bird on board the ship. Then the old gentleman, going at large through his legal talk, tried to make out the sale was a lottery and illegal, and appealed to the captain ; but Potter said he sold the birds *as* ostriches. He didn't want to sell any diamonds, he said, and didn't offer that as an inducement. The three birds he put up, to the best of his knowledge and belief, did *not* contain a diamond. It was in the one he kept—so he hoped.

"Prices ruled high next day all the same. The fact that now there were four chances instead of five of course caused a rise. The blessed birds averaged £227, and, oddly enough, this Padishah didn't secure one of 'em—not one. He made too much shindy, and when he ought to have been bidding he was talking about liens, and, besides, Potter was a bit down on him. One fell to a quiet little officer chap, another to the little Jew, and the third was syndicated by the engineers. And then Potter seemed suddenly sorry for having sold them, and said he'd flung away a clear thousand pounds, and that very likely he'd draw a blank and that he always had been a fool, but when I went and had a bit of a talk to him, with the idea of getting him to hedge on his last chance, I found he'd already sold the bird he'd reserved to a political chap that was on board, a chap who'd been studying Indian morals and social questions in his vacation. That last was the three hundred pounds bird. Well, they landed three of the blessed creatures at Brindisi—though the old gentleman said it was a breach of the Customs regulations—and Potter and Padishah landed too. The

Hindoo seemed half mad as he saw his blessed diamond going this way and that, so to speak. He kept on saying he'd get an injunction—he had injunction on the brain—and giving his name and address to the chaps who'd bought the birds, so that they'd know where to send the diamond. None of them wanted his name and address, and none of them would give their own. It was a fine row I can tell you—on the platform. They all went off by different trains. I came on to Southampton, and there I saw the last of the birds, as I came ashore ; it was the one the engineers bought, and it was standing up near the bridge, in a kind of crate, and looking as leggy and silly a setting for a valuable diamond as ever you saw—if it *was* a setting for a valuable diamond.

"How did it end?" Oh ! like that. Well—perhaps. Yes, there's one more thing that may throw light on it. A week or so after landing I was down Regent Street doing a bit of shopping, and who should I see arm-in-arm and having a purple time of it but Padishah and Potter. If you come to think of it——

"Yes. *I've* thought that. Only, you see, there's no doubt the diamond was real. And Padishah was an eminent Hindoo. *I've* seen his name in the papers—often. But whether the bird swallowed the diamond certainly is another matter, as you say."

STORY NINE

THROUGH A WINDOW

AFTER his legs were set, they carried Bailey into the study and put him on a couch before the open window. There he lay, a live—even a feverish man down to the loins, and below that a double-barrelled mummy swathed in white wrappings. He tried to read, even tried to write a little, but most of the time he looked out of the window.

He had thought the window cheerful to begin with, but now he thanked God for it many times a day. Within, the room was dim and grey, and in the reflected light the wear of the furniture showed plainly. His medicine and drink stood on the little table, with such litter as the bare branches of a bunch of grapes or the ashes of a cigar upon a green plate, or a day-old evening paper. The view outside was flooded with light, and across the corner of it came the head of the acacia, and at the foot the top of the balcony-railing of hammered iron. In the foreground was the weltering silver of the river, never quiet and yet never tiresome... Beyond was the reedy bank, a broad stretch of meadow land, and then a dark line of trees ending in a group of poplars at the distant bend of the river, and, up-standing behind them, a square church tower.

Up and down the river, all day long, things were passing. Now a string of barges drifting down to London, piled with lime or barrels of beer; then a steam-launch, disengaging heavy masses of black smoke, and disturbing the whole width of the river with long rolling waves; then an impetuous electric launch, and then a boatload of pleasure-seekers, a solitary sculler, or a four from some rowing club. Perhaps the river was quietest of a morning or late at night. One moonlight night some people drifted down singing, and with a zither playing—it sounded very pleasantly across the water.

In a few days Bailey began to recognise some of the craft in a week he knew the intimate history of half a dozen. The launch *Luzon*, from Fitzgibbon's, two miles up, would go fretting by, sometimes three or four times a day, conspicuous with its colouring of Indian-red and yellow, and its two Oriental attendants; and one day, to Bailey's vast amusement, the house-boat *Purple Emperor* came to a stop outside, and breakfasted in the most shameless domesticity. Then one afternoon, the captain of a slow-moving barge began a quarrel with his wife as they came into sight from the left, and had carried it to personal violence before he vanished behind the window-frame to the right. Bailey regarded all this as an entertainment got up to while away his illness, and applauded all the more moving incidents. Mrs. Green, coming in at rare intervals with his meals, would catch him clapping his hands or softly crying,

"Encore!" But the river players had other engagements, and his encore went unheeded.

"I should never have thought I could take such an interest in things that did not concern me," said Bailey to Wilderspin, who used to come in in his nervous, friendly way and try to comfort the sufferer by being talked to. "I thought this idle capacity was distinctive of little children and old maids. But it's just circumstances. I simply can't work, and things have to drift; it's no good to fret and struggle. And so I lie here and am as amused as a baby with a rattle, at this river and its affairs.

"Sometimes, of course, it gets a bit dull, but not often.

"I would give anything, Wilderspin, for a swamp—just one swamp—once. Heads swimming and a steam-launch to the rescue, and a chap or so hauled out with a boat-hook. . . . There goes Fitzgibbon's launch! They have a new boat-hook, I see, and the little blackie is still in the dumps. I don't think he's very well, Wilderspin. He's been like that for two or three days, squatting sulky-fashion and meditating over the churning of the water. Unwholesome for him to be always staring at the frothy water running away from the stern."

They watched the little steamer fuss across the patch of sunlit river, suffer momentary occultation from the acacia, and glide out of sight behind the dark window-frame.

"I'm getting a wonderful eye for details," said Bailey: "I spotted that new boat-hook at once. The other figger is a funny little chap. He never used to swagger with the old boat-hook like that."

"Malays, aren't they?" said Wilderspin.

"Don't know," said Bailey. "I thought one called all that sort of mariner Lascar."

Then he began to tell Wilderspin what he knew of the private affairs of the house-boat, *Purple Emperor*. "Funny," he said, "how these people come from all points of the compass—from Oxford and Windsor, from Asia and Africa—and gather and pass opposite the window just to entertain me. One man floated out of the infinite the day before yesterday, caught one perfect crab opposite, lost and recovered a scull, and passed on again. Probably he will never come into my life again. So far as I am concerned, he has lived and had his little troubles, perhaps thirty—perhaps forty—years on the earth, merely to make an ass of himself for three minutes in front of my window. Wonderful thing, Wilderspin, if you come to think of it."

"Yes," said Wilderspin; "isn't it?"

A day or two after this Bailey had a brilliant morning. Indeed, towards the end of the affair, it became almost as exciting as any window show very well could be. We will, however, begin at the beginning.

Bailey was all alone in the house, for his housekeeper had gone into the town three miles away to pay bills, and the ser-

vant had her holiday. The morning began dull. A canoe went up about half-past nine, and later a boat-load of camping men came down. But this was mere margin. Things became cheerful about ten o'clock.

It began with something white fluttering in the remote distance where the three poplars marked the river bend. "Pocket-handkerchief," said Bailey, when he saw it. "No. Too big! Flag perhaps."

However, it was not a flag, for it jumped about. "Man in whites running fast, and this way," said Bailey. "That's luck! But his whites are precious loose!"

Then a singular thing happened. There was a minute pink gleam among the dark trees in the distance, and a little puff of pale grey that began to drift and vanish eastward. The man in white jumped and continued running. Presently the report of the shot arrived.

"What the devil!" said Bailey. "Looks as if some one was shooting at him."

He sat up stiffly and stared hard. The white figure was coming along the pathway through the corn. "It's one of those niggers from the Fitzgibbon's," said Bailey, "or may I be hanged! I wonder why he keeps aswing with his arm."

Then three other figures became indistinctly visible against the dark background of the trees.

Abruptly on the opposite bank a man walked into the picture. He was black-bearded, dressed in flannels, had a red belt, and a vast grey felt hat. He walked, leaning very much forward and with his hands swinging before him. Behind him one could see the grass swept by the towing-rope of the boat he was dragging. He was steadfastly regarding the white figure that was hurrying through the corn. Suddenly he stopped. Then, with a peculiar gesture, Bailey could see that he began pulling in the tow-rope hand over hand. Over the water could be heard the voices of the people in the still invisible boat.

"What are you after, Hagshot?" said some one.

The individual with the red belt shouted something that was inaudible, and went on lugging in the rope, looking over his shoulder at the advancing white figure as he did so. He came down the bank, and the rope bent a lane among the reeds and lashed the water between his pulls.

Then just the bows of the boat came into view, with the towing-mast and a tall, fair-haired man standing up and trying to see over the bank. The boat bumped unexpectedly among the reeds, and the tall, fair-haired man disappeared suddenly, having apparently fallen back into the invisible part of the boat. There was a curse and some indistinct laughter. Hagshot did not laugh, but hastily clambered into the boat and pushed off. Abruptly the boat passed out of Bailey's sight.

But it was still audible. The melody of voices suggested that its occupants were busy telling each other what to do.

The running figure was drawing near the bank. Bailey could now see clearly that it was one of Fitzgibbon's Orientals, and began to realise what the sinuous thing the man carried in his hand might be. Three other men followed one another through the corn, and the foremost carried what was probably the gun. They were perhaps two hundred yards or more behind the Malay.

"It's a man hunt, by all that's holy!" said Bailey.

The Malay stopped for a moment and surveyed the bank to the right. Then he left the path, and, breaking through the corn, vanished in that direction. The three pursuers followed suit, and their heads and gesticulating arms above the corn, after a brief interval, also went out of Bailey's field of vision.

Bailey so far forgot himself as to swear. "Just as things were getting lively!" he said. Something like a woman's shriek came through the air. Then shouts, a howl, a dull whack upon the balcony outside that made Bailey jump, and then the report of a gun.

"This is precious hard on an invalid," said Bailey.

But more was to happen yet in his picture. In fact, a great deal more. The Malay appeared again, running now along the bank up-stream. His stride had more swing and less pace in it than before. He was threatening some one ahead with the ugly krees he carried. The blade, Bailey noticed, was dull—it did not shine as steel should.

Then came the tall, fair man, brandishing a boat-hook, and after him three other men in boating costume running clumsily with oars. The man with the grey hat and red belt was not with them. After an interval the three men with the gun reappeared, still in the corn, but now near the river bank. They emerged upon the towing-path, and hurried after the others. The opposite bank was left blank and desolate again.

The sick-room was disgraced by more profanity. "I would give my life to see the end of this," said Bailey. There were indistinct shouts up-stream. Once they seemed to be coming nearer, but they disappointed him.

Bailey sat and grumbled. He was still grumbling when his eye caught something black and round among the waves. "Hullo!" he said. He looked narrowly and saw two triangular black bodies frothing every now and then about a yard in front of this.

He was still doubtful when the little band of pursuers came into sight again, and began to point to this floating object. They were talking eagerly. Then the man with the gun took aim.

"He's swimming the river, by George!" said Bailey.

The Malay looked round, saw the gun, and went under. He came up so close to Bailey's bank of the river that one of the bars of the balcony hid him for a moment. As he emerged the man with the gun fired. The Malay kept steadily on—

ward—Bailey could see the wet hair on his forehead now and the krees between his teeth—and was presently hidden by the balcony.

This seemed to Bailey an unendurable wrong. The man was lost to him for ever now, so he thought. Why couldn't the brute have got himself decently caught on the opposite bank, or shot in the water?

"It's worse than Edwin Drood," said Bailey.

Over the river, too, things had become an absolute blank. All seven men had gone down-stream again, probably to get the boat and follow across. Bailey listened and waited. There was silence. "Surely it's not over like this," said Bailey.

Five minutes passed—ten minutes. Then a tug with two barges went up-stream. The attitudes of the men upon these were the attitudes of those who see nothing remarkable in earth, water, or sky. Clearly the whole affair had passed out of sight of the river. Probably the hunt had gone into the beech woods behind the house.

"Confound it!" said Bailey. "To be continued again, and no chance this time of the sequel. But this is hard on a sick man."

He heard a step on the staircase behind him, and looking round saw the door open. Mrs. Green came in and sat down, panting. She still had her bonnet on, her purse in her hand, and her little brown basket upon her arm. "Oh, there!" she said, and left Bailey to imagine the rest.

"Have a little whisky and water, Mrs. Green, and tell me about it," said Bailey.

Sipping a little, the lady began to recover her powers of explanation.

One of those black creatures at the Fitzgibbon's had gone mad, and was running about with a big knife, stabbing people. He had killed a groom, and stabbed the under-butler, and almost cut the arm off a boating gentleman.

"Running amuck with a krees," said Bailey. "I thought that was it."

And he was hiding in the wood when she came through it from the town.

"What! Did he run after you?" asked Bailey, with a certain touch of glee in his voice.

"No, that was the horrible part of it," Mrs. Green explained. She had been right through the woods and had *never known he was there*. It was only when she met young Mr. Fitzgibbon carrying his gun in the shrubbery that she heard anything about it. Apparently, what upset Mrs. Green was the lost opportunity for emotion. She was determined, however, to make the most of what was left her.

"To think he was there all the time!" she said, over and over again.

Bailey endured this patiently enough for perhaps ten

minutes. At last he thought it advisable to assert himself. "It's twenty past one, Mrs. Green," he said. "Don't you think it time you got me something to eat?"

This brought Mrs. Green suddenly to her knees.

"Oh Lord, sir!" she said. "Oh! don't go making me go out of this room, sir, till I know he's caught. He might have got into the house, sir. He might be creeping, creeping, with that knife of his, along the passage this very——"

She broke off suddenly and glared over him at the window. Her lower jaw dropped. Bailey turned his head sharply.

For the space of half a second things seemed just as they were. There was the tree, the balcony, the shining river, the distant church tower. Then he noticed that the acacia was displaced about a foot to the right, and that it was quivering, and the leaves were rustling. The tree was shaken violently, and a heavy panting was audible.

In another moment a hairy brown hand had appeared and clutched the balcony railings, and in another the face of the Malay was peering through these at the man on the couch. His expression was an unpleasant grin, by reason of the krees he held between his teeth, and he was bleeding from an ugly wound in his cheek. His hair wet to drying stuck out like horns from his head. His body was bare save for the wet trousers that clung to him. Bailey's first impulse was to spring from the couch, but his legs reminded him that this was impossible.

By means of the balcony and tree the man slowly raised himself until he was visible to Mrs. Green. With a choking cry she made for the door and fumbled with the handle.

Bailey thought swiftly and clutched a medicine bottle in either hand. One he flung, and it smashed against the acacia. Silently and deliberately, and keeping his bright eyes fixed on Bailey, the Malay clambered into the balcony. Bailey, still clutching his second bottle, but with a sickening, sinking feeling about his heart, watched first one leg come over the railing and then the other.

It was Bailey's impression that the Malay took about an hour to get his second leg over the rail. The period that elapsed before the sitting position was changed to a standing one seemed enormous—days, weeks, possibly a year or so. Yet Bailey had no clear impression of anything going on in his mind during that vast period, except a vague wonder at his inability to throw the second medicine bottle. Suddenly the Malay glanced over his shoulder. There was the crack of a rifle. He flung up his arms and came down upon the couch. Mrs. Green began a dismal shriek that seemed likely to last until Doomsday. Bailey stared at the brown body with its shoulder blade driven in, that writhed painfully across his legs and rapidly staining and soaking the spotless bandages. Then he looked at the long krees, with the reddish streaks upon its

blade, that lay an inch beyond the trembling brown fingers upon the floor. Then at Mrs. Green, who had backed hard against the door and was staring at the body and shrieking in gusty outbursts as if she would wake the dead. And then the body was shaken by one last convulsive effort.

The Malay gripped the knees, tried to raise himself with his left hand, and collapsed. Then he raised his head, stared for a moment at Mrs. Green, and twisting his face round looked at Bailey. With a gasping groan the dying man succeeded in clutching the bed-clothes with his disabled hand, and by a violent effort, which hurt Bailey's legs exceedingly, writhed sideways towards what must be his last victim. Then something seemed released in Bailey's mind and he brought down the second bottle with all his strength on to the Malay's face. The knees fell heavily upon the floor.

"Easy with those legs," said Bailey, as young Fitzgibbon and one of the boating party lifted the body off him.

Young Fitzgibbon was very white in the face. "I didn't mean to kill him," he said.

"It's just as well," said Bailey.

STORY TEN

THE TEMPTATION OF HARRINGAY

IT is quite impossible to say whether this thing really happened. It depends entirely on the word of R. M. Harringay, who is an artist.

Following his version of the affair, the narrative deposes that Harringay went into his studio about ten o'clock to see what he could make of the head that he had been working at the day before. The head in question was that of an Italian organ-grinder, and Harringay thought—but was not quite sure—that the title would be the "Vigil." So far he is frank, and his narrative bears the stamp of truth. He had seen the man expectant for pennies, and with a promptness that suggested genius, had had him in at once.

"Kneel. Look up at that bracket," said Harringay. "As if you expected pennies.

"Don't *grin*!" said Harringay. "I don't want to paint your gums. Look as though you were unhappy."

Now, after a night's rest, the picture proved decidedly unsatisfactory. "It's good work," said Harringay. "That little bit in the neck . . . But."

He walked about the studio and looked at the thing from this point and from that. Then he said a wicked word. In the original the word is given.

"Painting," he says he said. "Just a painting of an organ-grinder—a mere portrait. If it was a live organ-grinder I wouldn't mind. But somehow I never make things alive. I wonder if my imagination is wrong." This, too, has a truthful air. His imagination *is* wrong.

"That creative touch! To take canvas and pigment and make a man—as Adam was made of red ochre! But this thing! If you met it walking about the streets you would know it was only a studio production. The little boys would tell it to 'Garnome and git frimed.' Some little touch . . . Well—it won't do as it is."

He went to the blinds and began to pull them down. They were made of blue holland with the rollers at the bottom of the window, so that you pull them down to get more light. He gathered his palette, brushes, and mahlstick from his table. Then he turned to the picture and put a speck of brown in the corner of the mouth; and shifted his attention thence to the pupil of the eye. Then he decided that the chin was a trifle too impassive for a vigil.

Presently he put down his impedimenta, and lighting a pipe surveyed the progress of his work. "I'm hanged if the thing isn't sneering at me," said Harringay, and he still believes it sneered.

The animation of the figure had certainly increased, but scarcely in the direction he wished. There was no mistake about the sneer. "Vigil of the Unbeliever," said Harringay. "Rather subtle and clever that! But the left eyebrow isn't cynical enough."

He went and dabbed at the eyebrow, and added a little to the lobe of the ear to suggest materialism. Further consideration ensued. "Vigil's off, I'm afraid," said Harringay. "Why not Mephistopheles? But that's a bit *too* common. 'A Friend of the Doge'—not so seedy. The armour won't do, though. Too Camelot. How about a scarlet robe and call him 'One of the Sacred College'? Humour in that, and an appreciation of Middle Italian History."

"There's always Benvenuto Cellini," said Harringay; "with a clever suggestion of a gold cup in one corner. But that would scarcely suit the complexion."

He describes himself as babbling in this way in order to keep down an unaccountably unpleasant sensation of fear. The thing was certainly acquiring anything but a pleasing expression. Yet it was as certainly becoming far more of a living thing than it had been—if a sinister one—far more alive than anything he had ever painted before. "Call it 'Portrait of a Gentleman,'" said Harringay; "A Certain Gentleman."

"Won't do," said Harringay, still keeping up his courage. "Kind of thing they call Bad Taste. That sneer will have to come out. That gone, and a little more fire in the eye—never noticed how warm his eye was before—and he might do for—? What price Passionate Pilgrim? But that devilish face won't do—*this* side of the Channel."

"Some little inaccuracy does it," he said; "eyebrows probably too oblique"—therewith pulling the blind lower to get a better light, and resuming palette and brushes.

The face on the canvas seemed animated by a spirit of its own. Where the expression of diablerie came in he found impossible to discover. Experiment was necessary. The eyebrows—it could scarcely be the eyebrows? But he altered them. No, that was no better; in fact, if anything, a trifle more satanic. The corner of the mouth? Pah! more than ever a leer—and now, retouched, it was ominously grim. The eye, then? Catastrophe! he had filled his brush with vermilion instead of brown, and yet he had felt sure it was brown! The eye seemed now to have rolled in its socket, and was glaring at him an eye of fire. In a flash of passion, possibly with something of the courage of panic, he struck the brush full of bright red athwart the picture; and then a very curious thing, a very strange thing indeed, occurred—if it *did* occur.

The diabolified Italian before him shut both his eyes, pursed his mouth, and wiped the colour off his face with his hand.

Then the *red eye* opened again, with a sound like the opening

of lips, and the face smiled. "That was rather hasty of you," said the picture.

Harringay states that, now that the worst had happened, his self-possession returned. He had a saving persuasion that devils were reasonable creatures.

"Why do you keep moving about then," he said, "making faces and all that—sneering and squinting, while I am painting you?"

"I don't," said the picture.

"You *do*," said Harringay.

"It's yourself," said the picture.

"It's *not* myself," said Harringay.

"It *is* yourself," said the picture. "No! don't go hitting me with paint again, because it's true. You have been trying to fluke an expression on my face all the morning. Really, you haven't an idea what your picture ought to look like."

"I have," said Harringay.

"You have *not*," said the picture: "You *never* have with your pictures. You always start with the vaguest presentiment of what you are going to do; it is to be something beautiful—you are sure of that—and devout, perhaps, or tragic; but beyond that it is all experiment and chance. My dear fellow! you don't think you can paint a picture like that?"

Now it must be remembered that for what follows we have only Harringay's word.

"I shall paint a picture exactly as I like," said Harringay, calmly.

This seemed to disconcert the picture a little. "You can't paint a picture without an inspiration," it remarked.

"But I *had* an inspiration—for this."

"Inspiration!" sneered the sardonic figure; "a fancy that came from your seeing an organ-grinder looking up at a window! Vigil! Ha, ha! You just started painting on the chance of something coming—that's what you did. And when I saw you at it I came. I want a talk with you!"

"Art, with you," said the picture—"it's a poor business. You potter. I don't know how it is, but you don't seem able to throw your soul into it. You know too much. It hampers you. In the midst of your enthusiasms you ask yourself whether something like this has not been done before. And . . ."

"Look here," said Harringay, who had expected something better than criticism from the devil. "Are you going to talk studio to me?" He filled his number twelve hoghair with red paint.

"The true artist," said the picture, "is always an ignorant man. An artist who theorises about his work is no longer artist but critic. Wagner . . . I say!—What's that red paint for?"

"I'm going to paint you out," said Harringay. "I don't want to hear all that Tommy Rot. If you think just because I'm an artist by trade I'm going to talk studio to you, you make a precious mistake."

"One minute," said the picture, evidently alarmed. "I want to make you an offer—a genuine offer. It's right what I'm saying. You lack inspirations. Well. No doubt you've heard of the Cathedral of Cologne, and the Devil's Bridge, and——"

"Rubbish," said Harringay. "Do you think I want to go to perdition simply for the pleasure of painting a good picture, and getting it slated. Take that."

His blood was up. His danger only nerved him to action, so he says. So he planted a dab of vermilion in his creature's mouth. The Italian spluttered and tried to wipe it off—evidently horribly surprised. And then—according to Harringay—there began a very remarkable struggle, Harringay splashing away with the red paint, and the picture wriggling about and wiping it off as fast as he put it on. "*Two masterpieces*," said the demon. "Two indubitable masterpieces for a Chelsea artist's soul. It's a bargain?" Harringay replied with the paint brush.

For a few minutes nothing could be heard but the brush going and the spluttering and ejaculations of the Italian. A lot of the strokes he caught on his arm and hand, though Harringay got over his guard often enough. Presently the paint on the palette gave out and the two antagonists stood breathless, regarding each other. The picture was so smeared with red that it looked as if it had been rolling about a slaughterhouse, and it was painfully out of breath and very uncomfortable with the wet paint trickling down its neck. Still, the first round was in its favour on the whole. "Think," it said, sticking pluckily to its point, "two supreme masterpieces—in different styles. Each equivalent to the Cathedral . . ."

"I know," said Harringay, and rushed out of the studio and along the passage towards his wife's boudoir.

In another minute he was back with a large tin of enamel—Hedge Sparrow's Egg Tint, it was, and a brush. At the sight of that the artistic devil with the red eye began to scream. "*Three masterpieces—culminating masterpieces.*"

Harringay delivered cut two across the demon, and followed with a thrust in the eye. There was an indistinct rumbling. "*Four masterpieces*," and a spitting sound.

But Harringay had the upper hand now and meant to keep it. With rapid, bold strokes he continued to paint over the writhing canvas, until at last it was a uniform field of shining Hedge Sparrow tint. Once the mouth reappeared and got as far as "Five master—" before he filled it with enamel; and near the end the red eye opened and glared at him in-

dignantly. But at last nothing remained save a gleaming panel of drying enamel. For a little while a faint stirring beneath the surface puckered it slightly here and there, but presently even that died away and the thing was perfectly still.

Then Harringay—according to Harringay's account—lit his pipe and sat down and stared at the enamelled canvas, and tried to make out clearly what had happened. Then he walked round behind it, to see if the back of it was at all remarkable. Then it was he began to regret he had not photographed the Devil before he painted him out.

This is Harringay's story—not mine. He supports it by a small canvas (24 by 20) enamelled a pale green, and by violent asseverations. It is also true that he never has produced a masterpiece, and in the opinion of his intimate friends probably never will.

STORY ELEVEN

THE FLYING MAN

THE Ethnologist looked at the *bhimraj* feather thoughtfully. "They seemed loth to part with it," he said. "It is sacred to the Chiefs," said the lieutenant; "just as yellow silk, you know, is sacred to the Chinese Emperor."

The Ethnologist did not answer. He hesitated. Then opening the topic abruptly, "What on earth is this cock-and-bull story they have of a flying man?"

The lieutenant smiled faintly. "What did they tell you?" "I see," said the Ethnologist, "that you know of your fame."

The lieutenant rolled himself a cigarette. "I don't mind hearing about it once more. How does it stand at present?"

"It's so confoundedly childish," said the Ethnologist, becoming irritated. "How did you play it off upon them?"

The lieutenant made no answer, but lounged back in his folding-chair, still smiling.

"Here am I, come four hundred miles out of my way to get what is left of the folk-lore of these people, before they are utterly demoralised by missionaries and the military, and all I find are a lot of impossible legends about a sandy-haired scrub of an infantry lieutenant. How he is invulnerable—how he can jump over elephants—how he can fly. That's the toughest nut. One old gentleman described your wings, said they had black plumage and were not quite as long as a mule. Said he often saw you by moonlight hovering over the crests out towards the Shendu country. Confound it, man!"

The lieutenant laughed cheerfully. "Go on," he said. "Go on."

The Ethnologist did. At last he wearied. "To trade so," he said, "on these unsophisticated children of the mountains. How could you bring yourself to do it, man?"

"I'm sorry," said the lieutenant, "but truly the thing was forced upon me. I can assure you I was driven to it. And at the time I had not the faintest idea of how the Chin imagination would take it. Or curiosity. I can only plead it was an indiscretion and not malice that made me replace the folk-lore by a new legend. But as you seem aggrieved, I will try and explain the business to you."

"It was in the time of the last Lushai expedition but one, and Walters thought these people you have been visiting were friendly. So, with an airy confidence in my capacity for taking care of myself, he sent me up the gorge—fourteen miles of it—with three of the Derbyshire men and half a dozen Sepoys, two mules, and his blessing, to see what popular

feeling was like at that village you visited. A force of ten—not counting the mules—fourteen miles, and during a war! You saw the road?"

"Road!" said the Ethnologist.

"It's better now than it was. When we went up we had to wade in the river for a mile where the valley narrows, with a smart stream frothing round our knees and the stones as slippery as ice. There it was I dropped my rifle. Afterwards the Sappers blasted the cliff with dynamite and made the convenient way you came by. Then below, where those very high cliffs come, we had to keep on dodging across the river—I should say we crossed it a dozen times in a couple of miles.

"We got in sight of the place early the next morning. You know how it lies, on a spur half-way between the big hills, and as we began to appreciate how wickedly quiet the village lay under the sunlight, we came to a stop to consider.

"At that they fired a lump of filed brass idol at us, just by way of a welcome. It came twanging down the slope to the right of us where the boulders are, missed my shoulder by an inch or so, and plugged the mule that carried all the provisions and utensils. I never heard such a death-rattle before or since. And at that we became aware of a number of gentlemen carrying matchlocks, and dressed in things like plaid dusters, dodging about along the neck between the village and the crest to the east.

"'Right about face,' I said. 'Not too close together.'

"And with that encouragement my expedition of ten men came round and set off at a smart trot down the valley again hitherward. We did not wait to save anything our dead had carried, but we kept the second mule with us—he carried my tent, and some other rubbish—out of a feeling of friendship.

"So ended the battle—ingloriously. Glancing back, I saw the valley dotted with the victors, shouting and firing at us. But no one was hit. These Chins and their guns are very little good except at a sitting shot. They will sit and finick over a boulder for hours taking aim, and when they fire running it is chiefly for stage effect. Hooker, one of the Derbyshire men, fancied himself rather with the rifle, and stopped behind for half a minute to try his luck as we turned the bend. But he got nothing.

"I'm not a Xenophon to spin much of a yarn about my retreating army. We had to pull the enemy up twice in the next two miles when he became a bit pressing, by exchanging shots with him, but it was a fairly monotonous affair—hard breathing chiefly—until we got near the place where the hills run in towards the river and pinch the valley into a gorge. And there we very luckily caught a glimpse of half a dozen round black heads coming slanting-ways over the hill to the left of us—the east that is—and almost parallel with us.

"At that I called a halt. 'Look here,' says I to Hooker

and the other Englishmen, 'what are we to do now?' and I pointed to the heads.

"'Headed orf, or I'm a nigger,' said one of the men.

"'We shall be,' said another. 'You know the Chin way, George?'

"'They can pot every one of us at fifty yards,' says Hooker, 'in the place where the river is narrow. It's just suicide to go on down.'

"I looked at the hill to the right of us. It grew steeper lower down the valley, but it still seemed climbable. And all the Chins we had seen hitherto had been on the other side of the stream.

"'It's that or stopping,' says one of the Sepoys.

"So we started slanting up the hill. There was something faintly suggestive of a road running obliquely up the face of it, and that we followed. Some Chins presently came into view up the valley, and I heard some shots. Then I saw one of the Sepoys was sitting down about thirty yards below us. He had simply sat down without a word, apparently not wishing to give trouble. At that I called a halt again; I told Hooker to try another shot, and went back and found the man was hit in the leg. I took him up, carried him along to put him on the mule—already pretty well laden with the tent and other things which we had no time to take off. When I got up to the rest with him, Hooker had his empty Martini in his hand, and was grinning and pointing to a motionless black spot up the valley. All the rest of the Chins were behind boulders or back round the bend. 'Five hundred yards,' says Hooker, 'if an inch. And I'll swear I hit him in the head.'

"I told him to go and do it again, and with that we went on again.

"Now the hillside kept getting steeper as we pushed on, and the road we were following more and more of a shelf. At last it was mere cliff above and below us. 'It's the best road I have seen yet in Chin Lushai land,' said I to encourage the men, though I had a fear of what was coming.

"And in a few minutes the way bent round a corner of the cliff. Then, finis! the ledge came to an end.

"As soon as he grasped the position one of the Derbyshire men fell a-swearing at the trap we had fallen into. The Sepoys halted quietly. Hooker grunted and reloaded, and went back to the bend.

"Then two of the Sepoy chaps helped their comrade down and began to unload the mule.

"Now, when I came to look about me, I began to think we had not been so very unfortunate after all. We were on a shelf perhaps ten yards across it at widest. Above it the cliff projected so that we could not be shot down upon, and below was an almost sheer precipice of perhaps two or three hundred feet. Lying down we were invisible to any one across the ravine.

The only approach was along the ledge, and on that one man was as good as a host. We were in a natural stronghold, with only one disadvantage, our sole provision against hunger and thirst was one live mule. Still we were at most eight or nine miles from the main expedition, and no doubt, after a day or so, they would send up after us if we did not return.

"After a day or so . . ."

The lieutenant paused. "Ever been thirsty, Graham?"

"Not that kind," said the Ethnologist.

"H'm. . We had the whole of that day, the night, and the next day of it, and only a trifle of dew we wrung out of our clothes and the tent. And below us was the river going giggle, giggle, round a rock in mid-stream. I never knew such a barrenness of incident, or such a quantity of sensation. The sun might have had Joshua's command still upon it for all the motion one could see; and it blazed like a near furnace. Towards the evening of the first day one of the Derbyshire men said something—nobody heard what—and went off round the bend of the cliff. We heard shots, and when Hooker looked round the corner he was gone. And in the morning the Sepoy whose leg was shot was in delirium, and jumped or fell over the cliff. Then we took the mule and shot it, and that must needs go over the cliff too in its last struggles, leaving eight of us.

"We could see the body of the Sepoy down below, with the head in the water. He was lying face downwards, and so far as I could make out was scarcely smashed at all. Badly as the Chins might covet his head, they had the sense to leave it alone until the darkness came.

"At first we talked of all the chances there were of the main body hearing the firing, and reckoned whether they would begin to miss us, and all that kind of thing, but we dried up as the evening came on. The Sepoys played games with bits of stone among themselves, and afterwards told stories. The night was rather chilly. The second day nobody spoke. Our lips were black and our throats afire, and we lay about on the ledge and glared at one another. Perhaps it's as well we kept our thoughts to ourselves. One of the British soldiers began writing some blasphemous rot on the rock with a bit of pipe-clay, about his last dying will, until I stopped it. As I looked over the edge down into the valley and saw the river rippling I was nearly tempted to go after the Sepoy. It seemed a pleasant and desirable thing to go rushing down through the air with something to drink—or no more thirst at any rate—at the bottom. I remembered in time, though, that I was the officer in command, and my duty to set a good example, and that kept me from any such foolishness.

"Yet, thinking of that, put an idea into my head. I got up and looked at the tent and tent ropes, and wondered why I had not thought of it before. Then I came and peered over

the cliff again. This time the height seemed greater and the pose of the Sepoy rather more painful. But it was that or nothing. And to cut it short, I parachuted.

"I got a big circle of canvas out of the tent, about three times the size of that table-cover, and plugged the hole in the centre, and I tied eight ropes round it to meet in the middle and make a parachute. The other chaps lay about and watched me as though they thought it was a new kind of delirium. Then I explained my notion to the two British soldiers and how I meant to do it, and as soon as the short dusk had darkened into night, I risked it. They held the thing high up, and I took a run the whole length of the ledge. The thing filled with air like a sail, but at the edge I will confess I funked and pulled up.

"As soon as I stopped I was ashamed of myself—as well I might be in front of privates—and went back and started again. Off I jumped this time—with a kind of sob, I remember—clean into the air, with the big white sail bellying out above me.

"I must have thought at a frightful pace. It seemed a long time before I was sure that the thing meant to keep steady. At first it heeled sideways. Then I noticed the face of the rock which seemed to be streaming up past me, and me motionless. Then I looked down and saw in the darkness the river and the dead Sepoy rushing up towards me. But in the indistinct light I also saw three Chins, seemingly aghast at the sight of me, and that the Sepoy was decapitated. At that I wanted to go back again.

"Then my boot was in the mouth of one, and in a moment he and I were in a heap with the canvas fluttering down on the top of us. I fancy I dashed out his brains with my foot. I expected nothing more than to be brained myself by the other two, but the poor heathen had never heard of Baldwin, and incontinently bolted.

"I struggled out of the tangle of dead Chin and canvas, and looked round. About ten paces off lay the head of the Sepoy staring in the moonlight. Then I saw the water and went and drank. There wasn't a sound in the world but the footsteps of the departing Chins, a faint shout from above, and the gluck of the water. So soon as I had drunk my full I started off down the river.

"That about ends the explanation of the flying-man story. I never met a soul the whole eight miles of the way. I got to Walters' camp by ten o'clock, and a born idiot of a sentinel had the cheek to fire at me as I came trotting out of the darkness. So soon as I had hammered my story into Winter's thick skull, about fifty men started up the valley to clear the Chins out and get our men down. But for my own part I had too good a thirst to provoke it by going with them.

"You have heard what kind of a yarn the Chins made of it.

Wings as long as a mule, eh?—And black feathers! The gay lieutenant bird! Well, well."

The lieutenant meditated cheerfully for a moment. Then he added, "You would scarcely credit it, but when they got to the ridge at last, they found two more of the Sepoys had jumped over."

"The rest were all right?" asked the Ethnologist.

"Yes," said the lieutenant; "the rest were all right, barring a certain thirst, you know."

And at the memory he helped himself to soda and whisky again.

STORY TWELVE

THE DIAMOND MAKER

SOME business had detained me in Chancery Lane until nine in the evening, and thereafter, having some inkling of a headache, I was disinclined either for entertainment or further work. So much of the sky as the high cliffs of that narrow cañon of traffic left visible spoke of a serene night, and I determined to make my way down to the Embankment, and rest my eyes and cool my head by watching the variegated lights upon the river. Beyond comparison the night is the best time for this place; a merciful darkness hides the dirt of the waters, and the lights of this transition age, red, glaring orange, gas-yellow, and electric white, are set in shadowy outlines of every possible shade between grey and deep purple. Through the arches of Waterloo Bridge a hundred points of light mark the sweep of the Embankment, and above its parapet rise the towers of Westminster, warm grey against the starlight. The black river goes by with only a rare ripple breaking its silence, and disturbing the reflections of the lights that swim upon its surface.

"A warm night," said a voice at my side.

I turned my head, and saw the profile of a man who was leaning over the parapet beside me. It was a refined face, not unhandsome, though pinched and pale enough, and the coat collar turned up and pinned round the throat marked his status in life as sharply as a uniform. I felt I was committed to the price of a bed and breakfast if I answered him.

I looked at him curiously. Would he have anything to tell me worth the money, or was he the common incapable—incapable even of telling his own story? There was a quality of intelligence in his forehead and eyes, and a certain tremulousness in his nether lip that decided me.

"Very warm," said I; "but not too warm for us here."

"No," he said, still looking across the water, "it is pleasant enough here . . . just now."

"It is good," he continued after a pause, "to find anything so restful as this in London. After one has been fretting about business all day, about getting on, meeting obligations, and parrying dangers, I do not know what one would do if it were not for such pacific corners." He spoke with long pauses between the sentences. "You must know a little of the irksome labour of the world, or you would not be here. But I doubt if you can be so brain-weary and footsore as I am. . . . Bah! Sometimes I doubt if the game is worth the candle. I feel inclined to throw the whole thing over—name, wealth, and position—and take to some modest trade. But I know if I

abandoned my ambition—hardly as she uses me—I should have nothing but remorse left for the rest of my days.”

He became silent. I looked at him in astonishment. If ever I saw a man hopelessly hard-up it was the man in front of me. He was ragged and he was dirty, unshaven and unkempt; he looked as though he had been left in a dust-bin for a week. And he was talking to *me* of the irksome worries of a large business. I almost laughed outright. Either he was mad or playing a sorry jest on his own poverty.

“If high aims and high positions,” said I, “have their drawbacks of hard work and anxiety, they have their compensations. Influence, the power of doing good, of assisting those weaker and poorer than ourselves; and there is even a certain gratification in display. . . .”

My banter under the circumstances was in very vile taste. I spoke on the spur of the contrast of his appearance and speech. I was sorry even while I was speaking.

He turned a haggard but very composed face upon me. Said he: “I forget myself. Of course you would not understand.”

He measured me for a moment. “No doubt it is very absurd. You will not believe me even when I tell you, so that it is fairly safe to tell you. And it will be a comfort to tell some one. I really have a big business in hand, a very big business. But there are troubles just now. The fact is . . . I make diamonds.”

“I suppose,” said I, “you are out of work just at present?”

“I am sick of being disbelieved,” he said impatiently, and suddenly unbuttoning his wretched coat he pulled out a little canvas bag that was hanging by a cord round his neck. From this he produced a brown pebble. “I wonder if you know enough to know what that is?” He handed it to me.

Now, a year or so ago, I had occupied my leisure in taking a London science degree, so that I have a smattering of physics and mineralogy. The thing was not unlike an uncut diamond of the darker sort, though far too large, being almost as big as the top of my thumb. I took it, and saw it had the form of a regular octahedron, with the carved faces peculiar to the most precious of minerals. I took out my penknife and tried to scratch it—vainly. Leaning forward towards the gas-lamp, I tried the thing on my watch-glass, and scored a white line across that with the greatest ease.

I looked at my interlocutor with rising curiosity. “It certainly is rather like a diamond. But, if so, it is a Behemoth of diamonds. Where did you get it?”

“I tell you I made it,” he said. “Give it back to me.”

He replaced it hastily and buttoned his jacket. “I will sell it you for one hundred pounds,” he suddenly whispered eagerly. With that my suspicions returned. The thing might, after all, be merely a lump of that almost equally hard substance, corundum, with an accidental resemblance in shape to the diamond.

Or if it was a diamond, how came he by it, and why should he offer it at a hundred pounds ?

We looked into one another's eyes. He seemed eager, but honestly eager. At that moment I believed it was a diamond he was trying to sell. Yet I am a poor man, a hundred pounds would leave a visible gap in my fortunes and no sane man would buy a diamond by gaslight from a ragged tramp on his personal warranty only. Still, a diamond that size conjured up a vision of many thousands of pounds. Then, thought I, such a stone could scarcely exist without being mentioned in every book on gems, and again I called to mind the stories of contraband and light-fingered Kaffirs at the Cape. I put the question of purchase on one side.

"How did you get it ?" said I.

"I made it."

I had heard something of Moissan, but I knew his artificial diamonds were very small. I shook my head.

"You seem to know something of this kind of thing. I will tell you a little about myself. Perhaps then you may think better of the purchase." He turned round with his back to the river, and put his hands in his pockets. He sighed. "I know you will not believe me."

"Diamonds," he began—and as he spoke his voice lost its flavour of the tramp and assumed something of the easy tone of an educated man—"are to be made by throwing carbon out of combination in a suitable flux and under a suitable pressure ; the carbon crystallises out, not as black-lead or charcoal-powder, but as small diamonds. So much has been known to chemists for years, but no one yet has hit upon exactly the right flux in which to melt up the carbon, or exactly the right pressure for the best results. Consequently the diamonds made by chemists are small and dark, and worthless as jewels. Now I, you know, have given up my life to this problem—given my life to it.

"I began to work at the conditions of diamond making when I was seventeen, and now I am thirty-two. It seemed to me that it might take all the thought and energies of a man for ten years, or twenty years, but, even if it did, the game was still worth the candle. Suppose one to have at last just hit the right trick, before the secret got out and diamonds became as common as coal, one might realise millions. Millions !"

He paused and looked for my sympathy. His eyes shone hungrily. "To think," said he, "that I am on the verge of it all, and here !

"I had," he proceeded, "about a thousand pounds when I was twenty-one, and this, I thought, eked out by a little teaching, would keep my researches going. A year or two was spent in study, at Berlin chiefly, and then I continued on my own account. The trouble was the secrecy. You see, if once I had let out what I was doing, other men might have been spurred

on by my belief in the practicability of the idea ; and I do not pretend to be such a genius as to have been sure of coming in first, in the case of a race for the discovery. And you see it was important that if I really meant to make a pile, people should not know it was an artificial process and capable of turning out diamonds by the ton. So I had to work all alone. At first I had a little laboratory, but as my resources began to run out I had to conduct my experiments in a wretched unfurnished room in Kentish Town, where I slept at last on a straw mattress on the floor among all my apparatus. The money simply flowed away. I grudged myself everything except scientific appliances. I tried to keep things going by a little teaching, but I am not a very good teacher, and I have no university degree, nor very much education except in chemistry, and I found I had to give a lot of time and labour for precious little money. But I got nearer and nearer the thing. Three years ago I settled the problem of the composition of the flux, and got near the pressure by putting this flux of mine and a certain carbon composition into a closed-up gun-barrel, filling up with water, sealing tightly, and heating."

He paused.

"Rather risky," said I.

"Yes. It burst, and smashed all my windows and a lot of my apparatus ; but I got a kind of diamond powder nevertheless. Following out the problem of getting a big pressure upon the molten mixture from which the things were to crystallise, I hit upon some researches of Daubrée's at the Paris *Laboratoire des Poudres et Salpêtres*. He exploded dynamite in a tightly screwed steel cylinder, too strong to burst, and I found he could crush rocks into a muck not unlike the South African bed in which diamonds are found. It was a tremendous strain on my resources, but I got a steel cylinder made for my purpose after his pattern. I put in all my stuff and my explosives, built up a fire in my furnace, put the whole concern in, and—went out for a walk."

I could not help laughing at his matter-of-fact manner. "Did you not think it would blow up the house ? Were there other people in the place ?"

"It was in the interest of science," he said ultimately. "There was a costermonger family on the floor below, a begging-letter writer in the room behind mine, and two flower-women were upstairs. Perhaps it was a bit thoughtless. But possibly some of them were out."

"When I came back the thing was just where I left it, among the white-hot coals. The explosive hadn't burst the case. And then I had a problem to face. You know time is an important element in crystallisation. If you hurry the process the crystals are small—it is only by prolonged standing that they grow to any size. I resolved to let this apparatus cool for two years, letting the temperature go down slowly during

that time. And I was now quite out of money ; and with a big fire and the rent of my room, as well as my hunger to satisfy, I had scarcely a penny in the world.

"I can hardly tell you all the shifts I was put to while I was making the diamonds. I have sold newspapers, held horses, opened cab-doors. For many weeks I addressed envelopes. I had a place as assistant to a man who owned a barrow, and used to call down one side of the road while he called down the other. Once for a week I had absolutely nothing to do, and I begged. What a week that was ! One day the fire was going out and I had eaten nothing all day, and a little chap taking his girl out, gave me sixpence—to show-off. Thank heaven for vanity ! How the fish-shops smelt ! But I went and spent it all on coals, and had the furnace bright red again, and then—— Well, hunger makes a fool of a man.

"At last, three weeks ago, I let the fire out. I took my cylinder and unscrewed it while it was still so hot that it punished my hands, and I scraped out the crumbling lava-like mass with a chisel, and hammered it into a powder upon an iron plate. And I found three big diamonds and five small ones. As I sat on the floor hammering, my door opened, and my neighbour, the begging-letter writer, came in. He was drunk—as he usually is. 'Nerchist,' said he. 'You're drunk,' said I. 'Structive scoundrel,' said he. 'Go to your father,' said I, meaning the Father of Lies. 'Never you mind,' said he, and gave me a cunning wink, and hiccupped, and leaning up against the door, with his other eye against the door-post, began to babble of how he had been prying in my room, and how he had gone to the police that morning, and how they had taken down everything he had to say—'siffiwas a ge'm,' said he. Then I suddenly realised I was in a hole. Either I should have to tell these police my little secret, and get the whole thing blown upon, or be lagged as an Anarchist. So I went up to my neighbour and took him by the collar, and rolled him about a bit, and then I gathered up my diamonds and cleared out. The evening newspapers called my den the Kentish-Town Bomb Factory. And now I cannot part with the things for love or money.

"If I go in to respectable jewellers they ask me to wait, and go and whisper to a clerk to fetch a policeman, and then I say I cannot wait. And I found out a receiver of stolen goods, and he simply stuck to the one I gave him and told me to prosecute if I wanted it back. I am going about now with several hundred thousand pounds worth of diamonds round my neck, and without either food or shelter. You are the first person I have taken into my confidence. But I like your face and I am hard-driven."

He looked into my eyes.

"It would be madness," said I, "for me to buy a diamond under the circumstances. Besides, I do not carry hundreds of

pounds about in my pocket. Yet I more than half believe your story. I will, if you like, do this: come to my office to-morrow. . . ."

"You think I am a thief!" said he keenly. "You will tell the police. I am not coming into a trap."

"Somehow I am assured you are no thief. Here is my card. Take that, anyhow. You need not come to any appointment. Come when you will."

He took the card, and an earnest of my good-will.

"Think better of it and come," said I.

He shook his head doubtfully. "I will pay back your half-crown with interest some day—such interest as will amaze you," said he. "Anyhow, you will keep the secret? . . . Don't follow me."

He crossed the road and went into the darkness towards the little steps under the archway leading into Essex Street, and I let him go. And that was the last I ever saw of him.

Afterwards I had two letters from him asking me to send bank-notes—not cheques—to certain addresses. I weighed the matter over, and took what I conceived to be the wisest course. Once he called upon me when I was out. My urchin described him as a very thin, dirty, and ragged man, with a dreadful cough. He left no message. That was the finish of him so far as my story goes. I wonder sometimes what has become of him. Was he an ingenious monomaniac, or a fraudulent dealer in pebbles, or has he really made diamonds as he asserted? The latter is just sufficiently credible to make me think at times that I have missed the most brilliant opportunity of my life. He may of course be dead, and his diamonds carelessly thrown aside—one, I repeat, was almost as big as my thumb. Or he may be still wandering about trying to sell the things. It is just possible he may yet emerge upon society, and, passing athwart my heavens in the serene altitude sacred to the wealthy and the well-advertised, reproach me silently for my want of enterprise. I sometimes think I might at least have risked five pounds.

STORY THIRTEEN

ÆPYORNIS ISLAND

THE man with the scarred face leant over the table and looked at my bundle.

"Orchids?" he asked.

"A few," I said.

"Cypripediums," he said.

"Chiefly," said I.

"Anything new? I thought not. I did these islands twenty-five—twenty-seven years ago. If you find anything new here—well, it's brand new. I didn't leave much."

"I'm not a collector," said I.

"I was young then," he went on. "Lord! how I used to fly round." He seemed to take my measure. "I was in the East Indies two years and in Brazil seven. Then I went to Madagascar."

"I know a few explorers by name," I said, anticipating a yarn. "Whom did you collect for?"

"Dawsons'. I wonder if you've heard the name of Butcher ever?"

"Butcher—Butcher?" The name seemed vaguely present in my memory; then I recalled *Butcher v. Dawson*. "Why!" said I, "you are the man who sued them for four years' salary—got cast away on a desert island . . ."

"Your servant," said the man with the scar, bowing. "Funny case, wasn't it? Here was me, making a little fortune on that island, doing nothing for it neither, and them quite unable to give me notice. It often used to amuse me thinking over it while I was there. I did calculations of it—big—all over the blessed atoll in ornamental figuring."

"How did it happen?" said I. "I don't rightly remember the case."

"Well. . . . You've heard of the *Æpyornis*?"

"Rather. Andrews was telling me of a new species he was working on only a month or so ago. Just before I sailed. They've got a thigh-bone, it seems, nearly a yard long. Monster the thing must have been!"

"I believe you," said the man with the scar. "It *was* a monster. Sindbad's roc was just a legend of 'em. But when did they find these bones?"

"Three or four years ago—'91, I fancy. Why?"

"Why? Because I found them—Lord!—it's nearly twenty years ago. If Dawsons' hadn't been silly about that salary they might have made a perfect ring in 'em. . . . I couldn't help the infernal boat going adrift."

He paused. "I suppose it's the same place. A kind of swamp about ninety miles north of Antananarivo. Do you

happen to know? You have to go to it along the coast by boats. You don't happen to remember, perhaps?"

"I don't. I fancy Andrews said something about a swamp."

"It must be the same. It's on the east coast. And somehow there's something in the water that keeps things from decaying. Like creosote it smells. It reminded me of Trinidad. Did they get any more eggs? Some of the eggs I found were a foot and a half long. The swamp goes circling round, you know, and cuts off this bit. It's mostly salt, too. Well. . . . What a time I had of it! I found the things quite by accident. We went for eggs, me and two native chaps, in one of those rum canoes all tied together, and found the bones at the same time. We had a tent and provisions for four days, and we pitched on one of the firmer places. To think of it brings that odd tarry smell back even now. It's funny work. You go probing into the mud with iron rods, you know. Usually the egg gets smashed. I wonder how long it is since these *Æpyornis*es really lived. The missionaries say the natives have legends about when they were alive, but I never heard any such stories myself.¹ But certainly those eggs we got were as fresh as if they had been new laid. Fresh! Carrying them down to the boat one of my nigger chaps dropped one on a rock and it smashed. How I lammed into the beggar! But sweet it was, as if it was new laid, not even smelly, and its mother dead these four hundred years, perhaps. Said a centipede had bit him. However, I'm getting off the straight with the story. It had taken us all day to dig into the slush and get these eggs out unbroken, and we were all covered with beastly black mud, and naturally I was cross. So far as I knew they were the only eggs that have ever been got out not even cracked. I went afterwards to see the ones they have at the Natural History Museum in London; all of them were cracked and just stuck together like a mosaic, and bits missing. Mine were perfect, and I meant to blow them when I got back. Naturally I was annoyed at the silly duffer dropping three hours' work just on account of a centipede. I hit him about rather."

The man with the scar took out a clay pipe. I placed my pouch before him. He filled up absent-mindedly.

"How about the others? Did you get those home? I don't remember——"

"That's the queer part of the story. I had three others. Perfectly fresh eggs. Well, we put 'em in the boat, and then I went up to the tent to make some coffee, leaving my two heathens down by the beach—the one fooling about with his sting and the other helping him. It never occurred to me that the beggar would take advantage of the peculiar position I was in to pick a quarrel. But I suppose the centipede poison

¹ No European is known to have seen a live *Æpyornis*, with the doubtful exception of Macer, who visited Madagascar in 1745.—H. G. W.

and the kicking I had given him had upset the one—he was always a cantankerous sort—and he persuaded the other.

“I remember I was sitting and smoking and boiling up the water over a spirit-lamp business I used to take on these expeditions. Incidentally I was admiring the swamp under the sunset. All black and blood-red it was, in streaks—a beautiful sight. And up beyond the land rose grey and hazy to the hills, and the sky behind them red, like a furnace mouth. And fifty yards behind the back of me was these blessed heathen—quite regardless of the tranquil air of things—plotting to cut off with the boat and leave me all alone with three days’ provisions and a canvas tent, and nothing to drink whatsoever beyond a little keg of water. I heard a kind of yelp behind me, and there they were in this canoe affair—it wasn’t properly a boat—and, perhaps, twenty yards from land. I realised what was up in a moment. My gun was in the tent, and, besides, I had no bullets—only duck-shot. They knew that. But I had a little revolver in my pocket, and I pulled that out as I ran down to the beach.

“‘Come back!’ says I, flourishing it.

“They jabbered something at me, and the man that broke the egg jeered. I aimed at the other—because he was unwounded and had the paddle, and I missed. They laughed. However, I wasn’t beat. I knew I had to keep cool, and I tried him again and made him jump with the whang of it. He didn’t laugh that time. The third time I got his head, and over he went, and the paddle with him. It was a precious lucky shot for a revolver. I reckon it was fifty yards. He went right under. I don’t know if he was shot, or simply stunned and drowned. Then I began to shout to the other chap to come back, but he huddled up in the canoe and refused to answer. So I fired out my revolver at him and never got near him.

“I felt a precious fool, I can tell you. There I was on this rotten black beach, flat swamp all behind me, and the flat sea, cold after the sunset, and just this black canoe drifting steadily out to sea. I tell you I damned Dawsons’ and Jamrach’s and Museums and all the rest of it just to rights. I bawled to this nigger to come back, until my voice went up into a scream.

“There was nothing for it but to swim after him and take my luck with the sharks. So I opened my clasp-knife and put it in my mouth, and took off my clothes and waded in. As soon as I was in the water I lost sight of the canoe, but I aimed, as I judged, to head it off. I hoped the man in it was too bad to navigate it, and that it would keep on drifting in the same direction. Presently it came up over the horizon again to the south-westward about. The afterglow of sunset was well over now and the dim of night creeping up. The stars were coming through the blue. I swum like a champion, though my legs and arms were soon aching.

"However, I came up to him by the time the stars were fairly out. As it got darker I began to see all manner of glowing things in the water—phosphorescence, you know. At times it made me giddy. I hardly knew which was stars and which was phosphorescence, and whether I was swimming on my head or my heels. The canoe was as black as sin, and the ripple under the bows like liquid fire. I was naturally chary of clambering up into it. I was anxious to see what he was up to first. He seemed to be lying cuddled up in a lump in the bows, and the stern was all out of water. The thing kept turning round slowly as it drifted—kind of waltzing, don't you know. I went to the stern and pulled it down, expecting him to wake up. Then I began to clamber in with my knife in my hand, and ready for a rush. But he never stirred. So there I sat in the stern of the little canoe, drifting away over the calm phosphorescent sea and with all the host of the stars above me, waiting for something to happen.

"After a long time I called him by name, but he never answered. I was too tired to take any risks by going along to him. So we sat there. I fancy I dozed once or twice. When the dawn came I saw he was as dead as a door-nail and all puffed up and purple. My three eggs and the bones were lying in the middle of the canoe, and the keg of water and some coffee and biscuits wrapped in a Cape *Argus* by his feet, and a tin of methylated spirit underneath him. There was no paddle, nor, in fact, anything except the spirit tin that I could use as one, so I settled to drift until I was picked up. I held an inquest on him, brought in a verdict against some snake, scorpion, or centipede unknown, and sent him overboard.

"After that I had a drink of water and a few biscuits, and took a look round. I suppose a man low down as I was don't see very far; leastways, Madagascar was clean out of sight, and any trace of land at all. I saw a sail going south-westward—looked like a schooner but her hull never came up. Presently the sun got high in the sky and began to beat down upon me. Lord! it pretty near made my brains boil. I tried dipping my head in the sea, but after a while my eye fell on the Cape *Argus*, and I lay down flat in the canoe and spread this over me. Wonderful things these newspapers! I never read one through thoroughly before, but it's odd what you get up to when you're alone, as I was. I suppose I read that blessed old Cape *Argus* twenty times. The pitch in the canoe simply reeked with the heat and rose up into big blisters.

"I drifted ten days," said the man with the scar. "It's a little thing in the telling, isn't it? Every day was like the last. Except in the morning and the evening I never kept a lookout even—the blaze was so infernal. I didn't see a sail after the first three days, and those I saw took no notice of me. About the sixth night a ship went by scarcely half a mile away from me, with all its lights ablaze and its ports open, looking like

a big firefly. There was music aboard. I stood up and shouted and screamed at it. The second day I broached one of the Æpyornis eggs, scraped the shell away at the end bit by bit, and tried it, and I was glad to find it was good enough to eat. A bit flavoury—not bad, I mean—but with something of the taste of a duck's egg. There was a kind of circular patch, about six inches across, on one side of the yolk, and with streaks of blood and a white mark like a ladder in it that I thought queer, but I did not understand what this meant at the time, and I wasn't inclined to be particular. The egg lasted me three days, with biscuits and a drink of water. I chewed coffee-berries too—invigorating stuff. The second egg I opened about the eighth day, and it scared me."

The man with the scar paused. "Yes," he said, "developing."

"I dare say you find it hard to believe. I did, with the thing before me. There the egg had been, sunk in that cold black mud, perhaps three hundred years. But there was no mistaking it. There was the—what is it?—embryo, with its big head and curved back, and its heart beating under its throat, and the yolk shrivelled up and great membranes spreading inside of the shell and all over the yolk. Here was I hatching out the eggs of the biggest of all extinct birds, in a little canoe in the midst of the Indian Ocean. If old Dawson had known that! It was worth four years' salary. What do *you* think?

"However, I had to eat that precious thing up, every bit of it, before I sighted the reef, and some of the mouthfuls were beastly unpleasant. I left the third one alone. I held it up to the light, but the shell was too thick for me to get any notion of what might be happening inside; and though I fancied I heard blood pulsing, it might have been the rustle in my own ears, like what you listen to in a seashell.

"Then came the atoll. Came out of the sunrise, as it were, suddenly, close up to me. I drifted straight towards it until I was about half a mile from shore, not more, and then the current took a turn, and I had to paddle as hard as I could with my hands and bits of the Æpyornis shell to make the place. However, I got there. It was just a common atoll about four miles round, with a few trees growing and a spring in one place, and the lagoon full of parrot-fish. I took the egg ashore and put it in a good place, well above the tide lines and in the sun, to give it all the chance I could, and pulled the canoe up safe, and loafed about prospecting. It's rum how dull an atoll is. As soon as I had found a spring all the interest seemed to vanish. When I was a kid I thought nothing could be finer or more adventurous than the Robinson Crusoe business, but that place was as monotonous as a book of sermons. I went round finding eatable things and generally thinking; but I tell you I was bored to death before the first day was out.

It shows my luck—the very day I landed the weather changed. A thunderstorm went by to the north and flicked its wing over the island, and in the night there came a drencher and a howling wind slap over us. It wouldn't have taken much, you know, to upset that canoe.

"I was sleeping under the canoe, and the egg was luckily among the sand higher up the beach, and the first thing I remember was a sound like a hundred pebbles hitting the boat at once, and a rush of water over my body. I'd been dreaming of Antananarivo, and I sat up and halloaed to Intoshi to ask her what the devil was up, and clawed out at the chair where the matches used to be. Then I remembered where I was. There were phosphorescent waves rolling up as if they meant to eat me, and all the rest of the night as black as pitch. The air was simply yelling. The clouds seemed down on your head almost, and the rain fell as if heaven was sinking and they were baling out the waters above the firmament. One great roller came writhing at me, like a fiery serpent, and I bolted. Then I thought of the canoe, and ran down to it as the water went hissing back again; but the thing had gone. I wondered about the egg, then, and felt my way to it. It was all right and well out of reach of the maddest waves, so I sat down beside it, and cuddled it for company. Lord! what a night that was!

"The storm was over before the morning. There wasn't a rag of cloud left in the sky when the dawn came, and all along the beach there were bits of plank scattered—which was the disarticulated skeleton, so to speak, of my canoe. However, that gave me something to do, for taking advantage of two of the trees being together, I rigged up a kind of storm-shelter with these vestiges. And that day the egg hatched.

"Hatched, sir, when my head was pillowed on it and I was asleep. I heard a whack and felt a jar and sat up, and there was the end of the egg pecked out and a rum little brown head looking out at me. 'Lord!' I said, 'you're welcome'; and with a little difficulty he came out.

"He was a nice friendly little chap at first, about the size of a small hen—very much like most other young birds, only bigger. His plumage was a dirty brown to begin with, with a sort of grey scab that fell off it very soon, and scarcely feathers—a kind of downy hair. I can hardly express how pleased I was to see him. I tell you, Robinson Crusoe don't make near enough of his loneliness. But here was interesting company. He looked at me and winked his eye from the front backward, like a hen, and gave a chirp and began to peck about at once, as though being hatched three hundred years too late was just nothing. 'Glad to see you, Man Friday!' says I, for I had naturally settled he was to be called Man Friday if ever he was hatched, as soon as ever I found the egg in the canoe had developed. I was a bit anxious about his feed, so I gave him

a lump of raw parrot-fish at once. He took it, and opened his beak for more. I was glad of that, for, under the circumstances, if he'd been at all fanciful, I should have had to eat him after all.

"You'd be surprised what an interesting bird that Æpyornis chick was. He followed me about from the very beginning. He used to stand by me and watch while I fished in the lagoon, and go shares in anything I caught. And he was sensible, too. There were nasty green warty things, like pickled gherkins, used to lie about on the beach, and he tried one of these and it upset him. He never even looked at any of them again.

"And he grew. You could almost see him grow. And as I was never much of a society man, his quiet, friendly ways suited me to a T. For nearly two years we were as happy as we could be on that island. I had no business worries, for I knew my salary was mounting up at Dawsons'. We would see a sail now and then, but nothing ever came near us. I amused myself, too, by decorating the island with designs worked in sea-urchins and fancy shells of various kinds. I put ÆPYORNIS ISLAND all around the place very nearly, in big letters, like what you see done with coloured stones at railway stations in the old country, and mathematical calculations and drawings of various sorts. And I used to be watching the blessed bird stalking round and growing, growing; and think how I could make a living out of him by showing him about if I ever got taken off. After his first moult he began to get handsome, with a crest and a blue wattle, and a lot of green feathers at the behind of him. And then I used to puzzle whether Dawsons' had any right to claim him or not. Stormy weather and in the rainy season we lay snug under the shelter I had made out of the old canoe, and I used to tell him lies about my friends at home. And after a storm we would go round the island together to see if there was any drift. It was a kind of idyll, you might say. If only I had had some tobacco it would have been simply just like heaven.

"It was about the end of the second year our little paradise went wrong. Friday was then about fourteen feet high to the bill of him, with a big, broad head like the end of a pickaxe, and two huge brown eyes with yellow rims, set together like a man's—not out of sight of each other like a hen's. His plumage was fine—none of the half-mourning style of your ostrich—more like a cassowary as far as colour and texture go. And then it was he began to cock his comb at me and give himself airs, and show signs of a nasty temper. . . .

"At last came a time when my fishing had been rather unlucky, and he began to hang about me in a queer, meditative way. I thought he might have been eating sea-cucumbers or something, but it was really just discontent on his part. I was hungry, too, and when at last I landed a fish I wanted it for myself. Tempers were short that morning on both sides.

He pecked at it and grabbed it, and I gave him a whack on the head to make him leave go. And at that he went for me. Lord ! . . .

"He gave me this in the face." The man indicated his scar. "Then he kicked me. It was like a cart-horse. I got up, and, seeing he hadn't finished, I started off full tilt with my arms doubled up over my face. But he ran on those gawky legs of his faster than a race-horse, and kept landing out at me with sledge-hammer kicks and bringing his pickaxe down on the back of my head. I made for the lagoon, and went in up to my neck. He stopped at the water, for he hated getting his feet wet, and began to make a shindy, something like a peacock's, only hoarser. He started strutting up and down the beach. I'll admit I felt small to see this blessed fossil lording it there. And my head and face were all bleeding, and—well, my body just one jelly of bruises.

"I decided to swim across the lagoon and leave him alone for a bit, until the affair blew over. I shinned up the tallest palm-tree, and sat there thinking of it all. I don't suppose I ever felt so hurt by anything before or since. It was the brutal ingratitude of the creature. I'd been more than a brother to him. I'd hatched him, educated him. A great gawky, out-of-date bird ! And me a human being—heir of the ages and all that.

"I thought after a time he'd begin to see things in that light himself, and feel a little sorry for his behaviour. I thought if I was to catch some nice little bits of fish, perhaps, and go to him presently in a casual kind of way, and offer them to him, he might do the sensible thing. It took me some time to learn how unforgiving and cantankerous an extinct bird can be. Malice !

"I won't tell you all the little devices I tried to get that bird round again. I simply can't. It makes my cheek burn with shame even now to think of the snubs and buffets I had from this infernal curiosity. I tried violence. I chucked lumps of coral at him from a safe distance, but he only swallowed them. I shied my open knife at him and almost lost it, though it was too big for him to swallow. I tried starving him out and struck fishing, but he took to picking along the beach at low water after worms, and rubbed along on that. Half my time I spent up to my neck in the lagoon, and the rest up the palm-trees. One of them was scarcely high enough, and when he caught me up it he had a regular Bank Holiday with the calves of my legs. It got unbearable. I don't know if you have ever tried sleeping up a palm-tree. It gave me the most horrible nightmares. Think of the shame of it, too ! Here was this extinct animal mooning about my island like a sulky duke, and me not allowed to rest the sole of my foot on the place. I used to cry with weariness and vexation. I told him straight that I didn't mean to be chased about a desert island by any damned ana-

chronisms. I told him to go and peck a navigator of his own age. But he only snapped his beak at me. Great ugly bird, all legs and neck!

"I shouldn't like to say how long that went on altogether. I'd have killed him sooner if I'd known how. However, I hit on a way of settling him at last. It is a South American dodge. I joined all my fishing-lines together with stems of seaweed and things, and made a stoutish string, perhaps twelve yards in length or more, and I fastened two lumps of coral rock to the ends of this. It took me some time to do, because every now and then I had to go into the lagoon or up a tree as the fancy took me. This I whirled rapidly round my head, and then let it go at him. The first time I missed, but the next time the string caught his legs beautifully, and wrapped round them again and again. Over he went. I threw it standing waist-deep in the lagoon, and as soon as he went down I was out of the water and sawing at his neck with my knife. . . .

"I don't like to think of that even now. I felt like a murderer while I did it, though my anger was hot against him. When I stood over him and saw him bleeding on the white sand, and his beautiful great legs and neck writhing in his last agony . . . Pah!

"With that tragedy loneliness came upon me like a curse. Good Lord! you can't imagine how I missed that bird. I sat by his corpse and sorrowed over him, and shivered as I looked round the desolate, silent reef. I thought of what a jolly little bird he had been when he was hatched, and of a thousand pleasant tricks he had played before he went wrong. I thought if I'd only wounded him I might have nursed him round into a better understanding. If I'd had any means of digging into the coral rock I'd have buried him. I felt exactly as if he was human. As it was, I couldn't think of eating him, so I put him in the lagoon, and the little fishes picked him clean. I didn't even save the feathers. Then one day a chap cruising about in a yacht had a fancy to see if my atoll still existed.

"He didn't come a moment too soon, for I was about sick enough of the desolation of it, and only hesitating whether I should walk out into the sea and finish up the business that way, or fall back on the green things. . . .

"I sold the bones to a man named Winslow—a dealer near the British Museum, and he says he sold them to old Havers. It seems Havers didn't understand they were extra large, and it was only after his death they were attracted attention. They called 'em *Æpyornis*—what was it?"

"*Æpyornis vastus*," said I. "It's funny, the very thing was mentioned to me by a friend of mine. When they found an *Æpyornis* with a thigh a yard long, they thought they had reached the top of the scale, and called him *Æpyornis maximus*. Then some one turned up another thigh-bone four feet six or more, and that they called *Æpyornis titan*. Then your *vastus*

was found after old Havers died, in his collection, and then a *vastissimus* turned up."

"Winslow was telling me as much," said the man with the scar. "If they get any more *Æpyornises*, he reckons some scientific swell will go and burst a blood-vessel. But it was a queer thing to happen to a man, wasn't it—altogether?"

STORY FOURTEEN

THE REMARKABLE CASE OF DAVIDSON'S EYES

THE transitory mental aberration of Sidney Davidson, remarkable enough in itself, is still more remarkable if Wade's explanation is to be credited. It sets one dreaming of the oddest possibilities of intercommunication in the future, of spending an intercalary five minutes on the other side of the world, or being watched in our most secret operations by unsuspected eyes. It happened that I was the immediate witness of Davidson's seizure, and so it falls naturally to me to put the story upon paper.

When I say that I was the immediate witness of his seizure, I mean that I was the first on the scene. The thing happened at the Harlow Technical College, just beyond the Highgate Archway. He was alone in the larger laboratory when the thing happened. I was in a smaller room, where the balances are, writing up some notes. The thunderstorm had completely upset my work, of course. It was just after one of the louder peals that I thought I heard some glass smash in the other room. I stopped writing, and turned round to listen. For a moment I heard nothing, the hail was playing the devil's tattoo on the corrugated zinc of the roof. Then came another sound, a smash—no doubt of it this time. Something heavy had been knocked off the bench. I jumped up at once and went and opened the door leading into the big laboratory.

I was surprised to hear a queer sort of laugh, and saw Davidson standing unsteadily in the middle of the room, with a dazzled look on his face. My first impression was that he was drunk. He did not notice me. He was clawing out at something invisible a yard in front of his face. He put out his hand slowly, rather hesitatingly, and then clutched nothing. "What's come to it?" he said. He held up his hands to his face, fingers spread out. "Great Scott!" he said. The thing happened three or four years ago, when every one swore by that personage. Then he began raising his feet clumsily, as though he had expected to find them glued to the floor.

"Davidson!" cried I. "What's the matter with you?" He turned round in my direction and looked about for me. He looked over me and at me and on either side of me, without the slightest sign of seeing me. "Waves," he said; "and a remarkably neat schooner. I'd swear that was Bellow's voice. *Hullo!*" He shouted suddenly at the top of his voice.

I thought he was up to some foolery. Then I saw littered about his feet the shattered remains of the best of our electrometers. "What's up, man?" said I. "You've smashed the electrometer!"

"Bellows again!" said he. "Friends left, if my hands are

gone. Something about electrometers. Which way *are* you, Bellows ?” He suddenly came staggering towards me. “The damned stuff cuts like butter,” he said. He walked straight into the bench and recoiled. “None so buttery that !” he said, and stood swaying.

I felt scared. “Davidson,” said I, “what on earth’s come over you ?”

He looked round him in every direction. “I could swear that was Bellows. Why don’t you show yourself like a man, Bellows ?”

It occurred to me that he must be suddenly struck blind. I walked round the table and laid my hand upon his arm. I never saw a man more startled in my life. He jumped away from me, and came round into an attitude of self-defence, his face fairly distorted with terror. “Good God !” he cried. “What was that ?”

“It’s I—Bellows. Confound it, Davidson !”

He jumped when I answered him and stared—how can I express it ?—right through me. He began talking, not to me, but to himself. “Here in broad daylight on a clear beach. Not a place to hide in.” He looked about him wildly. “Here ! I’m *off*.” He suddenly turned and ran headlong into the big electromagnet—so violently that, as we found afterwards, he bruised his shoulder and jawbone cruelly. At that he stepped back a pace, and cried out with almost a whimper : “What, in Heaven’s name, has come over me ?” He stood, blanched with terror and trembling violently, with his right arm clutching his left, where that had collided with the magnet.

By that time I was excited and fairly scared. “Davidson,” said I, “don’t be afraid.”

He was startled at my voice, but not so excessively as before. I repeated my words in as clear and as firm a tone as I could assume. “Bellows,” he said, “is that you ?”

“Can’t you see it’s me ?”

He laughed. “I can’t even see it’s myself. Where the devil are we ?”

“Here,” said I, “in the laboratory.”

“The laboratory !” he answered in a puzzled tone, and put his hand to his forehead. “I *was* in the laboratory—till that flash came, but I’m hanged if I’m there now. What ship is that ?”

“There’s no ship,” said I. “Do be sensible, old chap.”

“No ship !” he repeated, and seemed to forget my denial forthwith. “I suppose,” said he slowly, “we’re both dead. But the rummy part is I feel as though I still had a body. Don’t get used to it all at once, I suppose. The old ship was struck by lightning, I suppose. Jolly quick thing, Bellows—eigh ?”

“Don’t talk nonsense. You’re very much alive. You are in the laboratory, blundering about. You’ve just smashed a new electrometer. I don’t envy you when Boyce arrives.”

He stared away from me towards the diagrams of cryo-hydrates. "I must be deaf," said he. "They've fired a gun, for there goes the puff of smoke, and I never heard a sound."

I put my hand on his arm again, and this time he was less alarmed. "We seem to have a sort of invisible bodies," said he. "By Jove! there's a boat coming round the headland. It's very much like the old life after all—in a different climate."

I shook his arm. "Davidson," I cried, "wake up!"

It was just then that Boyce came in. So soon as he spoke Davidson exclaimed: "Old Boyce! Dead too! What a lark!" I hastened to explain that Davidson was in a kind of somnambulistic trance. Boyce was interested at once. We both did all we could to rouse the fellow out of his extraordinary state. He answered our questions, and asked us some of his own, but his attention seemed distracted by his hallucination about a beach and a ship. He kept interpolating observations concerning some boat and the davits, and sails filling with the wind. It made one feel queer, in the dusky laboratory, to hear him saying such things.

He was blind and helpless. We had to walk him down the passage, one at each elbow, to Boyce's private room, and while Boyce talked to him there, and humoured him about this ship idea, I went along the corridor and asked old Wade to come and look at him. The voice of our Dean sobered him a little, but not very much. He asked where his hands were, and why he had to walk about up to his waist in the ground. Wade thought over him a long time—you know how he knits his brows—and then made him feel the couch, guiding his hands to it. "That's a couch," said Wade. "The couch in the private room of Prof. Boyce. Horsehair stuffing."

Davidson felt about, and puzzled over it, and answered presently that he could feel it all right, but he couldn't see it.

"What *do* you see?" asked Wade. Davidson said he could see nothing but a lot of sand and broken-up shells. Wade gave him some other things to feel, telling him what they were, and watching him keenly.

"The ship is almost hull down," said Davidson presently, apropos of nothing.

"Never mind the ship," said Wade. "Listen to me, Davidson. Do you know what hallucination means?"

"Rather," said Davidson.

"Well, everything you see is hallucinatory."

"Bishop Berkeley," said Davidson.

"Don't mistake me," said Wade. "You are alive and in this room of Boyce's. But something has happened to your eyes. You cannot see; you can feel and hear, but not see. Do you follow me?"

"It seems to me that I see too much." Davidson rubbed his knuckles into his eyes. "Well?" he said.

"That's all. Don't let it perplex you. Bellows here and I will take you home in a cab."

"Wait a bit," Davidson thought. "Help me to sit down," said he presently; "and now—I'm sorry to trouble you—but will you tell me all that over again?"

Wade repeated it very patiently. Davidson shut his eyes, and pressed his hands upon his forehead. "Yes," said he. "It's quite right. Now my eyes are shut I know you're right. That's you, Bellows, sitting by me on the couch. I'm in England again. And we're in the dark."

Then he opened his eyes. "And there," said he, "is the sun just rising, and the yards of the ship, and a tumbled sea, and a couple of birds flying. I never saw anything so real. And I'm sitting up to my neck in a bank of sand."

He bent forward and covered his face with his hands. Then he opened his eyes again. "Dark sea and sunrise! And yet I'm sitting on a sofa in old Boyce's room! . . . God help me!"

That was the beginning. For three weeks this strange affection of Davidson's eyes continued unabated. It was far worse than being blind. He was absolutely helpless, and had to be fed like a newly hatched bird, and led about and undressed. If he attempted to move, he fell over things or struck himself against walls or doors. After a day or so he got used to hearing our voices without seeing us, and willingly admitted he was at home, and that Wade was right in what he told him. My sister, to whom he was engaged, insisted on coming to see him, and would sit for hours every day while he talked about this beach of his. Holding her hand seemed to comfort him immensely. He explained that when we left the College and drove home—he lived in Hampstead village—it appeared to him as if we drove right through a sandhill—it was perfectly black until he emerged again—and through rocks and trees and solid obstacles, and when he was taken to his own room it made him giddy and almost frantic with the fear of falling, because going upstairs seemed to lift him thirty or forty feet above the rocks of his imaginary island. He kept saying he should smash all the eggs. The end was that he had to be taken down into his father's consulting-room and laid upon a couch that stood there.

He described the island as being a bleak kind of place on the whole, with very little vegetation, except some peaty stuff, and a lot of bare rock. There were multitudes of penguins, and they made the rocks white and disagreeable to see. The sea was often rough, and once there was a thunderstorm, and he lay and shouted at the silent flashes. Once or twice seals pulled up on the beach, but only on the first two or three days. He said it was very funny the way in which the penguins used to waddle right through him, and how he seemed to lie among them without disturbing them.

I remember one odd thing, and that was when he wanted very badly to smoke. We put a pipe in his hands—he almost poked his eye out with it—and lit it. But he couldn't taste anything. I've since found it's the same with me—I don't know if it's the usual case—that I cannot enjoy tobacco at all unless I can see the smoke.

But the queerest part of his vision came when Wade sent him out in a bath-chair to get fresh air. The Davidsons hired a chair, and got that deaf and obstinate dependant of theirs, Widgery, to attend to it. Widgery's ideas of healthy expeditions were peculiar. My sister, who had been to the Dogs' Home, met them in Camden Town, towards King's Cross, Widgery trotting along complacently, and Davidson, evidently most distressed, trying in his feeble, blind way to attract Widgery's attention.

He positively wept when my sister spoke to him. "Oh, get me out of this horrible darkness!" he said, feeling for her hand. "I must get out of it, or I shall die." He was quite incapable of explaining what was the matter, but my sister decided he must go home, and presently, as they went uphill towards Hampstead, the horror seemed to drop from him. He said it was good to see the stars again, though it was then about noon and a blazing day.

"It seemed," he told me afterwards, "as if I was being carried irresistibly towards the water. I was not very much alarmed at first. Of course it was night there—a lovely night."

"Of course?" I asked, for that struck me as odd.

"Of course," said he. "It's always night there when it is day here. . . . Well, we went right into the water, which was calm, and shining under the moonlight—just a broad swell that seemed to grow broader and flatter as I came down into it. The surface glistened just like a skin—it might have been empty space underneath for all I could tell to the contrary. Very slowly, for I rode slanting into it, the water crept up to my eyes. Then I went under and the skin seemed to break and heal again about my eyes. The moon gave a jump up in the sky and grew green and dim, and fish, faintly glowing, came darting round me—and things that seemed made of luminous glass; and I passed through a tangle of seaweeds that shone with an oily lustre. And so I drove down into the sea, and the stars went out one by one, and the moon grew greener and darker, and the seaweed became a luminous purple-red. It was all very faint and mysterious, and everything seemed to quiver. And all the while I could hear the wheels of the bath-chair creaking, and the footsteps of people going by, and a man in the distance selling the special *Pall Mall*.

"I kept sinking down deeper and deeper into the water. It became inky black about me, not a ray from above came down into that darkness, and the phosphorescent things grew brighter and brighter. The snaky branches of the deeper weeds

flickered like the flames of spirit-lamps ; but, after a time, there were no more weeds. The fishes came staring and gaping towards me, and into me and through me. I never imagined such fishes before. They had lines of fire along the sides of them as though they had been outlined with a luminous pencil. And there was a ghastly thing swimming backward with a lot of twining arms. And then I saw, coming very slowly towards me through the gloom, a hazy mass of light that resolved itself as it drew nearer into multitudes of fishes, struggling and darting round something that drifted. I drove on straight towards it, and presently I saw in the midst of the tumult, and by the light of the fish, a bit of splintered spar looming over me, and a dark hull tilting over, and some glowing phosphorescent forms that were shaken and writhed as the fish bit at them. Then it was I began to try to attract Widgery's attention. A horror came upon me. Ugh ! I should have driven right into those half-eaten — things. If your sister had not come ! They had great holes in them, Bellows, and . . . Never mind. But it was ghastly ! ”

For three weeks Davidson remained in this singular state, seeing what at the time we imagined was an altogether phantasmal world, and stone blind to the world around him. Then, one Tuesday, when I called I met old Davidson in the passage. “ He can see his thumb ! ” the old gentleman said, in a perfect transport. He was struggling into his overcoat. “ He can see his thumb, Bellows ! ” he said, with the tears in his eyes. “ The lad will be all right yet.”

I rushed in to Davidson. He was holding up a little book before his face, and looking at it and laughing in a weak kind of way.

“ It's amazing,” said he. “ There's a kind of patch come there.” He pointed with his finger. “ I'm on the rocks as usual, and the penguins are staggering and flapping about as usual, and there's been a whale showing every now and then, but it's got too dark now to make him out. But put something *there*, and I see it—I do see it. It's very dim and broken in places, but I see it all the same, like a faint spectre of itself. I found it out this morning while they were dressing me. It's like a hole in this infernal phantom world. Just put your hand by mine. No—not there. Ah ! Yes ! I see it. The base of your thumb and a bit of cuff ! It looks like the ghost of a bit of your hand sticking out of the darkling sky. Just by it there's a group of stars like a cross coming out.”

From that time Davidson began to mend. His account of the change, like his account of the vision, was oddly convincing. Over patches of his field of vision, the phantom world grew fainter, grew transparent, as it were, and through these translucent gaps he began to see dimly the real world about him. The patches grew in size and number, ran together and spread until only here and there were blind spots left upon his eyes.

He was able to get up and steer himself about, feed himself once more, read, smoke, and behave like an ordinary citizen again. At first it was very confusing to him to have these two pictures overlapping each other like the changing views of a lantern, but in a little while he began to distinguish the real from the illusory.

At first he was unfeignedly glad, and seemed only too anxious to complete his cure by taking exercise and tonics. But as that odd island of his began to fade away from him, he became queerly interested in it. He wanted particularly to go down into the deep sea again, and would spend half his time wandering about the low-lying parts of London, trying to find the water-logged wreck he had seen drifting. The glare of real daylight very soon impressed him so vividly as to blot out everything of his shadowy world, but of a night-time, in a darkened room, he could still see the white-splashed rocks of the island, and the clumsy penguins staggering to and fro. But even these grew fainter and fainter, and, at last, soon after he married my sister, he saw them for the last time.

And now to tell of the queerest thing of all. About two years after his cure I dined with the Davidsons, and after dinner a man named Atkins called in. He is a lieutenant in the Royal Navy, and a pleasant, talkative man. He was on friendly terms with my brother-in-law, and was soon on friendly terms with me. It came out that he was engaged to Davidson's cousin, and incidentally he took out a kind of pocket photograph case to show us a new rendering of his *fiancée*. "And, by the bye," said he, "here's the old *Fulmar*."

Davidson looked at it casually. Then suddenly his face lit up. "Good heavens!" said he. "I could almost swear——"

"What?" said Atkins.

"That I had seen that ship before."

"Don't see how you can have. She hasn't been out of the South Seas for six years, and before then——"

"But," began Davidson, and then: "Yes—that's the ship I dreamt of; I'm sure that's the ship I dreamt of. She was standing off an island that swarmed with penguins, and she fired a gun."

"Good Lord!" said Atkins, who had now heard the particulars of the seizure. "How the deuce could you dream that?"

And then, bit by bit, it came out that on the very day Davidson was seized, H.M.S. *Fulmar* had actually been off a little rock to the south of Antipodes Island. A boat had landed overnight to get penguins' eggs, had been delayed, and a thunderstorm drifting up, the boat's crew had waited until the morning before rejoining the ship. Atkins had been one of them, and he corroborated, word for word, the descriptions Davidson had given of the island and the boat. There is not the slightest doubt in any of our minds that Davidson has really

seen the place. In some unaccountable way, while he moved hither and thither in London, his sight moved hither and thither in a manner that corresponded, about this distant island. *How* is absolutely a mystery.

That completes the remarkable story of Davidson's eyes. It's perhaps the best authenticated case in existence of real vision at a distance. Explanation there is none forthcoming, except what Prof. Wade has thrown out. But his explanation involves the Fourth Dimension, and a dissertation on theoretical kinds of space. To talk of there being "a kink in space" seems mere nonsense to me; it may be because I am no mathematician. When I said that nothing would alter the fact that the place is eight thousand miles away, he answered that two points might be a yard away on a sheet of paper, and yet be brought together by bending the paper round. The reader may grasp his argument, but I certainly do not. His idea seems to be that Davidson, stooping between the poles of the big electromagnet, had some extraordinary twist given to his retinal elements through the sudden change in the field of force due to the lightning.

He thinks, as a consequence of this, that it may be possible to live visually in one part of the world, while one lives bodily in another. He has even made some experiments in support of his views; but, so far, he has simply succeeded in blinding a few dogs. I believe that is the net result of his work, though I have not seen him for some weeks. Latterly I have been so busy with my work in connection with the Saint Pancras installation that I have had little opportunity of calling to see him. But the whole of his theory seems fantastic to me. The facts concerning Davidson stand on an altogether different footing, and I can testify personally to the accuracy of every detail I have given.

STORY FIFTEEN

THE LORD OF THE DYNAMOS

THE chief attendant of the three dynamos that buzzed and rattled at Camberwell and kept the electric railway going, came out of Yorkshire, and his name was James Holroyd. He was a practical electrician but fond of whisky, a heavy, red-haired brute with irregular teeth. He doubted the existence of the Deity but accepted Carnot's cycle, and he had read Shakespeare and found him weak in chemistry. His helper came out of the mysterious East, and his name was Azuma-zi. But Holroyd called him Pooh-bah. Holroyd liked a nigger help because he would stand kicking—a habit with Holroyd—and did not pry into the machinery and try to learn the ways of it. Certain odd possibilities of the negro mind brought into abrupt contact with the crown of our civilisation Holroyd never fully realised, though just at the end he got some inkling of them.

To define Azuma-zi was beyond ethnology. He was, perhaps, more negroid than anything else, though his hair was curly rather than frizzy, and his nose had a bridge. Moreover, his skin was brown rather than black, and the whites of his eyes were yellow. His broad cheek-bones and narrow chin gave his face something of the viperine V. His head, too, was broad behind, and low and narrow at the forehead, as if his brain had been twisted round in the reverse way to a European's. He was short of stature and still shorter of English. In conversation he made numerous odd noises of no known marketable value, and his infrequent words were carved and wrought into heraldic grotesqueness. Holroyd tried to elucidate his religious beliefs, and—especially after whisky—lectured to him against superstition and missionaries. Azuma-zi, however, shirked the discussion of his gods, even though he was kicked for it.

Azuma-zi had come, clad in white but insufficient raiment, out of the stoke-hole of the *Lord Clive*, from the Straits Settlements and beyond, into London. He had heard even in his youth of the greatness and riches of London, where all the women are white and fair and even the beggars in the streets are white; and he had arrived, with newly-earned gold coins in his pocket, to worship at the shrine of civilisation. The day of his landing was a dismal one; the sky was dun, and a wind-worried drizzle filtered down to the greasy streets, but he plunged boldly into the delights of Shadwell, and was presently cast up, shattered in health, civilised in costume, penniless, and, except in matters of the direst necessity, practically a dumb animal, to toil for James Holroyd, and to be bullied by him in the dynamo shed at Camberwell. And to James Holroyd bullying was a labour of love.

There were three dynamos with their engines at Camberwell. The two that have been there since the beginning are small machines ; the larger one was new. The smaller machines made a reasonable noise ; their straps hummed over the drums, every now and then the brushes buzzed and fizzled, and the air churned steadily, whoo ! whoo ! whoo ! between their poles. One was loose in its foundations and kept the shed vibrating. But the big dynamo drowned these little noises altogether with the sustained drone of its iron core, which somehow set part of the ironwork humming. The place made the visitor's head reel with the throb, throb, throb of the engines, the rotation of the big wheels, the spinning ball-valves, the occasional spittings of the steam, and over all the deep, unceasing, surging note of the big dynamo. This last noise was from an engineering point of view a defect, but Azuma-zi accounted it unto the monster for mightiness and pride.

If it were possible we would have the noises of that shed always about the reader as he reads, we would tell all our story to such an accompaniment. It was a steady stream of din, from which the ear picked out first one thread and then another ; there was the intermittent snorting, panting, and seething of the steam-engines, the suck and thud of their pistons, the dull beat on the air as the spokes of the great driving wheels came round, a note the leather straps made as they ran tighter and looser, and a fretful tumult from the dynamos ; and, over all, sometimes inaudible, as the ear tired of it, and then creeping back upon the senses again, was this trombone note of the big machine. The floor never felt steady and quiet beneath one's feet, but quivered and jarred. It was a confusing, unsteady place, and enough to send any one's thoughts jerking into odd zigzags. And for three months, while the big strike of the engineers was in progress, Holroyd who was a blackleg, and Azuma-zi who was a mere black, were never out of the stir and eddy of it, but slept and fed in the little wooden shanty between the shed and the gates.

Holroyd delivered a theological lecture on the text of his big machine soon after Azuma-zi came. He had to shout to be heard in the din. "Look at that," said Holroyd ; "where's your 'eathen idol to match 'im ?" And Azuma-zi looked. For a moment Holroyd was inaudible, and then Azuma-zi heard : "Kill a hundred men. Twelve per cent. on the ordinary shares," said Holroyd, "and that's something like a Gord."

Holroyd was proud of his big dynamo, and expatiated upon its size and power to Azuma-zi until heaven knows what odd currents of thought that the incessant whirling and shindy set up within the curly black cranium. He would explain in the most graphic manner the dozen or so ways in which a man might be killed by it, and once he gave Azuma-zi a shock as a

sample of its quality. After that, in the breathing times of his labour—it was heavy labour, being not only his own, but most of Holroyd's—Azuma-zi would sit and watch the big machine. Now and then the brushes would sparkle and spit blue flashes, at which Holroyd would swear, but all the rest was as smooth and rhythmic as breathing. The band ran shouting over the shaft, and ever behind one as one watched was the complacent thud of the piston. So it lived all day in this big airy shed, with him and Holroyd to wait upon it; not prisoned up and slaving to drive a ship as the other engines he knew—mere captive devils of the British Solomon—had been, but a machine enthroned. Those two smaller dynamos Azuma-zi by force of contrast despised; the large one he privately christened the Lord of the Dynamos. They were fretful and irregular, but the big dynamo was steady. How great it was! How serene and easy in its working! Greater and calmer even than the Buddhas he had seen at Rangoon, and yet not motionless, but living! The great black coils spun, spun, spun, the rings ran round under the brushes, and the deep note of its coil steadied the whole. It affected Azuma-zi queerly.

Azuma-zi was not fond of labour. He would sit about and watch the Lord of the Dynamos while Holroyd went away to persuade the yard porter to get whisky, although his proper place was not in the dynamo shed but behind the engines, and, moreover, if Holroyd caught him skulking he got hit for it with a rod of stout copper wire. He would go and stand close to the colossus, and look up at the great leather band running overhead. There was a black patch on the band that came round, and it pleased him somehow among all the clatter to watch this return again and again. Odd thoughts spun with the whirl of it. Scientific people tell us that savages give souls to rocks and trees—and a machine is a thousand times more alive than a rock or a tree. And Azuma-zi was practically a savage still; the veneer of civilisation lay no deeper than his slop suit, his bruises, and the coal grime on his face and hands. His father before him had worshipped a meteoric stone; kindred blood, it may be, had splashed the broad wheels of Juggernaut.

He took every opportunity Holroyd gave him of touching and handling the great dynamo that was fascinating him. He polished and cleaned it until the metal parts were blinding in the sun. He felt a mysterious sense of service in doing this. He would go up to it and touch its spinning coils gently. The gods he had worshipped were all far away. The people in London hid their gods.

At last his dim feelings grew more distinct and took shape in thoughts, and at last in acts. When he came into the roaring shed one morning he salaamed to the Lord of the Dynamos, and then, when Holroyd was away, he went and whispered to the thundering machine that he was its servant, and prayed it

to have pity on him and save him from Holroyd. As he did so a rare gleam of light came in through the open archway of the throbbing machine-shed, and the Lord of the Dynamos, as he whirled and roared, was radiant with pale gold. Then Azuma-zi knew that his service was acceptable to his Lord. After that he did not feel so lonely as he had done, and he had indeed been very much alone in London. Even when his work-time was over, which was rare, he loitered about the shed.

The next time Holroyd maltreated him, Azuma-zi went presently to the Lord of the Dynamos and whispered, "Thou seest, O my Lord!" and the angry whirr of the machinery seemed to answer him. Thereafter it appeared to him that whenever Holroyd came into the shed a different note mingled with the sounds of the dynamo. "My Lord bides his time," said Azuma-zi to himself. "The iniquity of the fool is not yet ripe." And he waited and watched for the reckoning. One day there was evidence of short circuiting, and Holroyd, making an unwary examination—it was in the afternoon—got a rather severe shock. Azuma-zi from behind the engine saw him jump off and curse at the peccant coil.

"He is warned," said Azuma-zi to himself. "Surely my Lord is very patient."

Holroyd had at first initiated his "nigger" into such elementary conceptions of the dynamo's working as would enable him to take temporary charge of the shed in his absence. But when he noticed the manner in which Azuma-zi hung about the monster he became suspicious. He dimly perceived his assistant was "up to something," and connecting him with the anointing of the coils with oil that had rotted the varnish in one place, he issued an edict, shouted above the confusion of the machinery, "Don't 'ee go nigh that big dynamo any more, Pooh-bah, or a'll take thy skin off!" Besides, if it pleased Azuma-zi to be near the big machine, it was plain sense and decency to keep him away from it.

Azuma-zi obeyed at the time, but later he was caught bowing before the Lord of the Dynamos. At which Holroyd twisted his arm and kicked him as he turned to go away. As Azuma-zi presently stood behind the engine and glared at the back of the hated Holroyd, the noises of the machinery took a new rhythm and sounded like four words in his native tongue.

It is hard to say exactly what madness is. I fancy Azuma-zi was mad. The incessant din and whirl of the dynamo shed may have churned up his little store of knowledge and big store of superstitious fancy, at last, into something akin to frenzy. At any rate, when the idea of making Holroyd a sacrifice to the Dynamo Fetich was thus suggested to him, it filled him with a strange tumult of exultant emotion.

That night the two men and their black shadows were alone in the shed together. The shed was lit with one big arc-light and winked and flickered purple. The shadows lay black

behind the dynamos, the ball governors of the engines whirled from light to darkness, and their pistons beat loud and steadily. The world outside seen through the open end of the shed seemed incredibly dim and remote. It seemed absolutely silent, too, since the riot of the machinery drowned every external sound. Far away was the black fence of the yard with grey shadowy houses behind, and above was the deep blue sky and the pale little stars. Azuma-zi suddenly walked across the centre of the shed above which the leather bands were running, and went into the shadow of the big dynamo. Holroyd heard a click, and the spin of the armature changed.

"What are you dewin' with that switch?" he bawled in surprise. "Han't I told you——"

Then he saw the set expression of Azuma-zi's eyes as the Asiatic came out of the shadow towards him.

In another moment the two men were grappling fiercely in front of the great dynamo.

"You coffee-headed fool!" gasped Holroyd, with a brown hand at his throat. "Keep off those contact rings." In another moment he was tripped and reeling back upon the Lord of the Dynamos. He instinctively loosened his grip upon his antagonist to save himself from the machine.

The messenger, sent in furious haste from the station to find out what had happened in the dynamo shed, met Azuma-zi at the porter's lodge by the gate. Azuma-zi tried to explain something, but the messenger could make nothing of the black's incoherent English, and hurried on to the shed. The machines were all noisily at work, and nothing seemed to be disarranged. There was, however, a queer smell of singed hair. Then he saw an odd-looking crumpled mass clinging to the front of the big dynamo, and, approaching, recognised the distorted remains of Holroyd.

The man stared and hesitated a moment. Then he saw the face, and shut his eyes convulsively. He turned on his heel before he opened them, so that he should not see Holroyd again, and went out of the shed to get advice and help.

When Azuma-zi saw Holroyd die in the grip of the Great Dynamo he had been a little scared about the consequences of his act. Yet he felt strangely elated, and knew that the favour of the Lord Dynamo was upon him. His plan was already settled when he met the man coming from the station, and the scientific manager who speedily arrived on the scene jumped at the obvious conclusion of suicide. This expert scarcely noticed Azuma-zi, except to ask a few questions. Did he see Holroyd kill himself? Azuma-zi explained he had been out of sight at the engine furnace until he heard a difference in the noise from the dynamo. It was not a difficult examination, being untinctured by suspicion.

The distorted remains of Holroyd, which the electrician removed from the machine, were hastily covered by the porter

with a coffee-stained tablecloth. Somebody, by a happy inspiration, fetched a medical man. The expert was chiefly anxious to get the machine at work again, for seven or eight trains had stopped midway in the stuffy tunnels of the electric railway. Azuma-zi, answering or misunderstanding the questions of the people who had by authority or impudence come into the shed, was presently sent back to the stoke-hole by the scientific manager. Of course a crowd collected outside the gates of the yard—a crowd, for no known reason, always hovers for a day or two near the scene of a sudden death in London—two or three reporters percolated somehow into the engine shed, and one even got to Azuma-zi; but the scientific expert cleared them out again, being himself an amateur journalist.

Presently the body was carried away, and public interest departed with it. Azuma-zi remained very quietly at his furnace, seeing over and over again in the coals a figure that wriggled violently and became still. An hour after the murder, to any one coming into the shed things would have looked exactly as if nothing remarkable had ever happened there. Peeping presently from his engine-room the black saw the Lord Dynamo spin and whirl beside his little brothers, and the driving-wheels were beating round and the steam in the pistons went thud, thud, exactly as it had been earlier in the evening. After all, from the mechanical point of view it had been a most insignificant incident—the mere temporary deflection of a current. But now the slender form and slender shadow of the scientific manager replaced the sturdy outline of Holroyd travelling up and down the lane of light upon the vibrating floor under the straps between the engines and the dynamos.

“Have I not served my Lord?” said Azuma-zi inaudibly from his shadow, and the note of the great dynamo rang out full and clear. As he looked at the big whirling mechanism the strange fascination of it that had been a little in abeyance since Holroyd’s death resumed its sway.

Never had Azuma-zi seen a man killed so swiftly and pitilessly. The big humming machine had slain its victim without wavering for a second from its steady beating. It was indeed a mighty god.

The unconscious scientific manager stood with his back to him, scribbling on a piece of paper. His shadow lay at the foot of the monster.

Was the Lord Dynamo still hungry? His servant was ready.

Azuma-zi made a stealthy step forward; then stopped. The scientific manager suddenly ceased his writing, walked down the shed to the endmost of the dynamos, and began to examine the brushes.

Azuma-zi hesitated, and then slipped across noiselessly into the shadow by the switch. There he waited. Presently the

manager's footsteps could be heard returning. He stopped in his old position, unconscious of the stoker crouching ten feet away from him. Then the big dynamo suddenly fizzled, and in another moment Azuma-zi had sprung out of the darkness upon him.

The scientific manager was gripped round the body and swung towards the big dynamo. Kicking with his knee and forcing his antagonist's head down with his hands, he loosened the grip on his waist and swung round away from the machine. Then the black grasped him again, putting a curly head against his chest, and they swayed and panted as it seemed for an age or so. Then the scientific manager was impelled to catch a black ear in his teeth and bite furiously. The black yelled hideously.

They rolled over on the floor, and the black, who had apparently slipped from the vice of the teeth or parted with some ear—the scientific manager wondered which at the time—tried to throttle him. The scientific manager was making some ineffectual efforts to claw something with his hands and to kick, when the welcome sound of quick footsteps sounded on the floor. The next moment Azuma-zi had left him and darted towards the big dynamo. There was a splutter amid the roar.

The officer of the company who had entered stood staring as Azuma-zi caught the naked terminals in his hands, gave one horrible convulsion, and then hung motionless from the machine, his face violently distorted.

"I'm jolly glad you came in when you did," said the scientific manager, still sitting on the floor.

He looked at the still quivering figure. "It is not a nice death to die, apparently—but it is quick."

The official was still staring at the body. He was a man of slow apprehension.

There was a pause.

The scientific manager got up on his feet rather awkwardly. He ran his fingers along his collar thoughtfully, and moved his head to and fro several times.

"Poor Holroyd! I see now." Then almost mechanically he went towards the switch in the shadow and turned the current into the railway circuit again. As he did so the singed body loosened its grip upon the machine and fell forward on its face. The core of the dynamo roared out loud and clear, and the armature beat the air.

So ended prematurely the worship of the Dynamo Deity, perhaps the most short-lived of all religions. Yet withal it could at least boast a Martyrdom and a Human Sacrifice.

STORY SIXTEEN

THE HAMMERPOND PARK BURGLARY

IT is a moot point whether burglary is to be considered as a sport, a trade, or an art. For a trade, the technique is scarcely rigid enough, and its claims to be considered an art are vitiated by the mercenary element that qualifies its triumphs. On the whole it seems to be most justly ranked as sport, a sport for which no rules are at present formulated, and of which the prizes are distributed in an extremely informal manner. It was this informality of burglary that led to the regrettable extinction of two promising beginners at Hammerpond Park.

The stakes offered in this affair consisted chiefly of diamonds and other personal *bric-à-brac* belonging to the newly married Lady Aveling. Lady Aveling, as the reader will remember, was the only daughter of Mrs. Montague Pangs, the well-known hostess. Her marriage to Lord Aveling was extensively advertised in the papers, the quantity and quality of her wedding presents, and the fact that the honeymoon was to be spent at Hammerpond. The announcement of these valuable prizes created a considerable sensation in the small circle in which Mr. Teddy Watkins was the undisputed leader, and it was decided that, accompanied by a duly qualified assistant, he should visit the village of Hammerpond in his professional capacity.

Being a man of naturally retiring and modest disposition, Mr. Watkins determined to make this visit *incog.*, and after due consideration of the conditions of his enterprise, he selected the rôle of a landscape artist and the unassuming surname of Smith. He preceded his assistant, who, it was decided, should join him only on the last afternoon of his stay at Hammerpond. Now the village of Hammerpond is perhaps one of the prettiest little corners in Sussex; many thatched houses still survive, the flint-built church with its tall spire nestling under the down is one of the finest and least restored in the county, and the beech-woods and bracken jungles through which the road runs to the great house are singularly rich in what the vulgar artist and photographer call "bits." So that Mr. Watkins, on his arrival with two virgin canvases, a brand-new easel, a paint-box, portmanteau, an ingenious little ladder made in sections (after the pattern of the late lamented master, Charles Peace), crowbar, and wire coils, found himself welcomed with effusion and some curiosity by half a dozen other brethren of the brush. It rendered the disguise he had chosen unexpectedly plausible, but it inflicted upon him a considerable amount of æsthetic conversation for which he was very imperfectly prepared.

"Have you exhibited very much?" said Young Porson in the bar-parlour of the "Coach and Horses," where Mr. Watkins

was skilfully accumulating local information on the night of his arrival.

"Very little," said Mr. Watkins, "just a snack here and there."

"Academy?"

"In course. *And* at the Crystal Palace."

"Did they hang you well?" said Porson.

"Don't rot," said Mr. Watkins; "I don't like it."

"I mean did they put you in a good place?"

"Whadyer mean?" said Mr. Watkins suspiciously. "One 'ud think you were trying to make out I'd been put away."

Porson had been brought up by aunts, and was a gentlemanly young man even for an artist; he did not know what being "put away" meant, but he thought it best to explain that he intended nothing of the sort. As the question of hanging seemed a sore point with Mr. Watkins, he tried to divert the conversation a little.

"Do you do figure-work at all?"

"No, never had a head for figures," said Mr. Watkins, "my miss—Mrs. Smith, I mean, does all that."

"She paints too!" said Porson. "That's rather jolly."

"Very," said Mr. Watkins, though he really did not think so, and, feeling the conversation was drifting a little beyond his grasp, added, "I came down here to paint Hammerpond House by moonlight."

"Really!" said Porson. "That's rather a novel idea."

"Yes," said Mr. Watkins. "I thought it rather a good notion when it occurred to me. I expect to begin to-morrow night."

"What! You don't mean to paint in the open, by night?"

"I do, though."

"But how will you see your canvas?"

"Have a bloomin' cop's——" began Mr. Watkins, rising too quickly to the question, and then realising this, bawled to Miss Durgan for another glass of beer. "I'm goin' to have a thing called a dark lantern," he said to Porson.

"But it's about new moon now," objected Porson. "There won't be any moon."

"There'll be the house," said Watkins, "at any rate. I'm goin', you see, to paint the house first and the moon afterwards."

"Oh!" said Porson, too staggered to continue the conversation.

"They doo say," said old Durgan, the landlord, who had maintained a respectful silence during the technical conversation, "as there's no less than three p'licemen from 'Azleworth on dewty every night in the house—'count of this Lady Aveling 'n her jewellery. One'm won fower-and-six last night off second footman—tossin'."

Towards sunset next day Mr. Watkins, virgin canvas, easel,

and a very considerable case of other appliances in hand, strolled up the pleasant pathway through the beech-woods to Hammerpond Park, and pitched his apparatus in a strategic position commanding the house. Here he was observed by Mr. Raphael Sant, who was returning across the park from a study of the chalk-pits. His curiosity having been fired by Porson's account of the new arrival, he turned aside with the idea of discussing nocturnal art.

Mr. Watkins was apparently unaware of his approach. A friendly conversation with Lady Hammerpond's butler had just terminated, and that individual, surrounded by the three pet dogs which it was his duty to take for an airing after dinner had been served, was receding in the distance. Mr. Watkins was mixing colour with an air of great industry. Sant, approaching more nearly, was surprised to see the colour in question was as harsh and brilliant an emerald green as it is possible to imagine. Having cultivated an extreme sensibility to colour from his earliest years, he drew the air in sharply between his teeth at the very first glimpse of this brew. Mr. Watkins turned round. He looked annoyed.

"What on earth are you going to do with that *beastly* green?" said Sant.

Mr. Watkins realised that his zeal to appear busy in the eyes of the butler had evidently betrayed him into some technical error. He looked at Sant and hesitated.

"Pardon my rudeness," said Sant, "but really, that green is altogether too amazing. It came as a shock. What *do* you mean to do with it?"

Mr. Watkins was collecting his resources. Nothing could save the situation but decision. "If you come here interrupting my work," he said, "I'm a-goin' to paint your face with it."

Sant retired, for he was a humorist and a peaceful man. Going down the hill he met Porson and Wainwright. "Either that man is a genius or he is a dangerous lunatic," said he. "Just go up and look at his green." And he continued his way, his countenance brightened by a pleasant anticipation of a cheerful affray round an easel in the gloaming, and the shedding of much green paint.

But to Porson and Wainwright Mr. Watkins was less aggressive, and explained that the green was intended to be the first coating of his picture. It was, he admitted in response to a remark, an absolutely new method, invented by himself. But subsequently, he became more reticent; he explained he was not going to tell every passer-by the secret of his own particular style, and added some scathing remarks upon the meanness of people "hanging about" to pick up such tricks of the masters as they could, which immediately relieved him of their company.

Twilight deepened, first one, then another star appeared. The rooks amid the tall trees to the left of the house had long

since lapsed into slumbrous silence, the house itself lost all the details of its architecture and became a dark grey outline, and then the windows of the salon shone out brilliantly, the conservatory was lighted up, and here and there a bedroom window burnt yellow. Had any one approached the easel in the park it would have been found deserted. One brief uncivil word in brilliant green sullied the purity of its canvas. Mr. Watkins was busy in the shrubbery with his assistant, who had discreetly joined him from the carriage-drive.

Mr. Watkins was inclined to be self-congratulatory upon the ingenious device by which he had carried all his apparatus boldly, and in the sight of all men, right up to the scene of operations. "That's the dressing-room," he said to his assistant, "and, as soon as the maid takes the candle away and goes down to supper, we'll call in. My! how nice the house do look, to be sure, against the starlight, and with all its windows and lights! Swopme, Jim, I almost wish I *was* a painter-chap. Have you fixed that there wire across the path from the laundry.

He cautiously approached the house until he stood below the dressing-room window, and began to put together his folding-ladder. He was much too experienced a practitioner to feel any unusual excitement. Jim was reconnoitring the smoking-room. Suddenly, close beside Mr. Watkins in the bushes, there was a violent crash and a stifled curse. Some one had tumbled over the wire which his assistant had just arranged. He heard feet running on the gravel pathway beyond. Mr. Watkins, like all true artists, was a singularly shy man, and he incontinently dropped his folding ladder and began running circumspectly through the shrubbery. He was indistinctly aware of two people hot upon his heels, and he fancied that he distinguished the outline of his assistant in front of him. In another moment he had vaulted the low stone wall bounding the shrubbery, and was in the open park. Two thuds on the turf followed his own leap.

It was a close chase in the darkness through the trees. Mr. Watkins was a loosely-built man and in good training, and he gained hand-over-hand upon the hoarsely panting figure in front. Neither spoke, but, as Mr. Watkins pulled up alongside, a qualm of awful doubt came over him. The other man turned his head at the same moment, and gave an exclamation of surprise. "It's not Jim," thought Mr. Watkins, and simultaneously the stranger flung himself, as it were, at Watkins' knees, and they were forthwith grappling on the ground together. "Lend a hand, Bill," cried the stranger as the third man came up. And Bill did—two hands in fact, and some accentuated feet. The fourth man, presumably Jim, had apparently turned aside and made off in a different direction. At any rate, he did not join the trio.

Mr. Watkins' memory of the incidents of the next two

minutes is extremely vague. He has a dim recollection of having his thumb in the corner of the mouth of the first man, and feeling anxious about its safety, and for some seconds at least he held the head of the gentleman answering to the name of Bill, to the ground by the hair. He was also kicked in a great number of different places, apparently by a vast multitude of people. Then the gentleman who was not Bill got his knee below Mr. Watkins' diaphragm, and tried to curl him up upon it.

When his sensations became less entangled he was sitting upon the turf, and eight or ten men—the night was dark, and he was rather too confused to count—standing round him, apparently waiting for him to recover. He mournfully assumed that he was captured, and would probably have made some philosophical reflections on the fickleness of fortune, had not his internal sensations disinclined him for speech.

He noticed very quickly that his wrists were not handcuffed, and then a flask of brandy was put in his hands. This touched him a little—it was such unexpected kindness.

"He's a-comin' round," said a voice which he fancied as belonging to the Hammerpond second footman.

"We've got 'em, sir, both of 'em," said the Hammerpond butler, the man who had handed him the flask. "Thanks to *you*."

No one answered this remark. Yet he failed to see how it applied to him.

"He's fair dazed," said a strange voice; "the villains half murdered him."

Mr. Teddy Watkins decided to remain fair dazed until he had a better grasp of the situation. He perceived that two of the black figures round him stood side-by-side with a dejected air, and there was something in the carriage of their shoulders that suggested to his experienced eye hands that were bound together. Two! In a flash he rose to his position. He emptied the little flask and staggered—obsequious hands assisting him—to his feet. There was a sympathetic murmur.

"Shake hands, sir, shake hands," said one of the figures near him. "Permit me to introduce myself. I am very greatly indebted to you. It was the jewels of my wife, Lady Aveling, which attracted these scoundrels to the house."

"Very glad to make your lordship's acquaintance," said Teddy Watkins.

"I presume you saw the rascals making for the shrubbery, and dropped down on them?"

"That's exactly how it happened," said Mr. Watkins.

"You should have waited till they got in at the window," said Lord Aveling; "they would get it hotter if they had actually committed the burglary. And it was lucky for you two of the policeman were out by the gates, and followed up the three of you. I doubt if you could have secured the two

of them—though it was confoundedly plucky of you all the same.”

“Yes, I ought to have thought of all that,” said Mr. Watkins; “but one can’t think of everything.”

“Certainly not,” said Lord Aveling. “I am afraid they have mauled you a little,” he added. The party was now moving towards the house. “You walk rather lame. May I offer you my arm?”

And instead of entering Hammerpond House by the dressing-room window, Mr. Watkins entered it—slightly intoxicated, and inclined now to cheerfulness again—on the arm of a real live peer, and by the front door. “This,” thought Mr. Watkins, “is burghing in style!” The “scoundrels,” seen by the gaslight, proved to be mere local amateurs unknown to Mr. Watkins, and they were taken down into the pantry and there watched over by the three policemen, two gamekeepers with loaded guns, the butler, an ostler, and a carman, until the dawn allowed of their removal to Hazelhurst police-station. Mr. Watkins was made much of in the saloon. They devoted a sofa to him, and would not hear of a return to the village that night. Lady Aveling was sure he was brilliantly original, and said her idea of Turner was just such another rough, half-inebriated, deep-eyed, brave, and clever man. Some one brought up a remarkable little folding-ladder that had been picked up in the shrubbery, and showed him how it was put together. They also described how wires had been found in the shrubbery, evidently placed there to trip up unwary pursuers. It was lucky he had escaped these snares. And they showed him the jewels.

Mr. Watkins had the sense not to talk too much, and in any conversational difficulty fell back on his internal pains. At last he was seized with stiffness in the back, and yawning. Every one suddenly awoke to the fact that it was a shame to keep him talking after his affray, so he retired early to his room, the little red room next to Lord Aveling’s suite.

The dawn found a deserted easel bearing a canvas with a green inscription, in the Hammerpond Park, and it found Hammerpond House in commotion. But if the dawn found Mr. Teddy Watkins and the Aveling diamonds, it did not communicate the information to the police.

STORY SEVENTEEN

THE MOTH

PROBABLY you have heard of Hapley—not W. T. Hapley, the son, but the celebrated Hapley, the Hapley of *Periplaneta Haplia*, Hapley the entomologist.

If so you know at least of the great feud between Hapley and Professor Pawkins, though certain of its consequences may be new to you. For those who have not, a word or two of explanation is necessary, which the idle reader may go over with a glancing eye if his indolence so incline him.

It is amazing how very widely diffused is the ignorance of such really important matters as this Hapley-Pawkins feud. Those epoch-making controversies, again, that have convulsed the Geological Society are, I verily believe, almost entirely unknown outside the fellowship of that body. I have heard men of fair general education even refer to the great scenes at these meetings as vestry-meeting squabbles. Yet the great hate of the English and Scotch geologists has lasted now half a century, and has "left deep and abundant marks upon the body of the science." And this Hapley-Pawkins business, though perhaps a more personal affair, stirred passions as profound, if not profounder. Your common man has no conception of the zeal that animates a scientific investigator, the fury of contradiction you can arouse in him. It is the *odium theologicum* in a new form. There are men, for instance, who would gladly burn Sir Ray Lankester at Smithfield for his treatment of the Mollusca in the *Encyclopædia*. That fantastic extension of the Cephalopods to cover the Pteropods. . . . But I wander from Hapley and Pawkins.

It began years and years ago with a revision of the Microlepidoptera (whatever these may be) by Pawkins, in which he extinguished a new species created by Hapley. Hapley, who was always quarrelsome, replied by a stinging impeachment of the entire classification of Pawkins.¹ Pawkins in his "Rejoinder"² suggested that Hapley's microscope was as defective as his power of observation, and called him an "irresponsible meddler"—Hapley was not a professor at that time. Hapley in his retort,³ spoke of "blundering collectors," and described, as if inadvertently, Pawkins's revision as a "miracle of ineptitude." It was war to the knife. However, it would scarcely interest the reader to detail how these two great men quarrelled, and how the split between them widened until from the Microlepidoptera they were at war upon every open ques-

¹ "Remarks on a Recent Revision of Microlepidoptera," *Quart. Journ. Entomological Soc.*, 1863.

² "Rejoinder to Certain Remarks," etc. *Ibid.* 1864.

³ "Further Remarks," etc. *Ibid.*

tion in entomology. There were memorable occasions. At times the Royal Entomological Society meetings resembled nothing so much as the Chamber of Deputies. On the whole, I tancy Pawkins was nearer the truth than Hapley. But Hapley was skilful with his rhetoric, had a turn for ridicule rare in a scientific man, was endowed with vast energy, and had a fine sense of injury in the matter of the extinguished species ; while Pawkins was a man of dull presence, prosy of speech, in shape not unlike a water-barrel, over-conscientious with testimonials, and suspected of jobbing museum appointments. So the young men gathered round Hapley and applauded him. It was a long struggle, vicious from the beginning and growing at last to pitiless antagonism. The successive turns of fortune, now an advantage to one side and now to another—now Hapley tormented by some success of Pawkins, and now Pawkins outshone by Hapley, belong rather to the history of entomology than to this story.

But in 1891 Pawkins, whose health had been bad for some time, published some work upon the "mesoblast" of the Death's-Head Moth. What the mesoblast of the Death's-Head Moth may be does not matter a rap in this story. But the work was far below his usual standard, and gave Hapley an opening he had coveted for years. He must have worked night and day to make the most of his advantage.

In an elaborate critique he rent Pawkins to tatters—one can fancy the man's disordered black hair, and his queer dark eyes flashing as he went for his antagonist—and Pawkins made a reply, halting, ineffectual, with painful gaps of silence, and yet malignant. There was no mistaking his will to wound Hapley, nor his incapacity to do it. But few of those who heard him—I was absent from that meeting—realised how ill the man was.

Hapley got his opponent down, and meant to finish him. He followed with a brutal attack upon Pawkins, in the form of a paper upon the development of moths in general, a paper showing evidence of an extraordinary amount of labour, couched in a violently controversial tone. Violent as it was, an editorial note witnesses that it was modified. It must have covered Pawkins with shame and confusion of face. It left no loophole ; it was murderous in argument, and utterly contemptuous in tone ; an awful thing for the declining years of a man's career.

The world of entomologists waited breathlessly for the rejoinder from Pawkins. He would try one, for Pawkins had always been game. But when it came it surprised them. For the rejoinder of Pawkins was to catch influenza, proceed to pneumonia, and die.

It was perhaps as effectual a reply as he could make under the circumstances, and largely turned the current of feeling against Hapley. The very people who had most gleefully cheered on those gladiators became serious at the consequence,

There could be no reasonable doubt the fret of the defeat had contributed to the death of Pawkins. There was a limit even to scientific controversy, said serious people. Another crushing attack was already in the press and appeared on the day before the funeral. I don't think Hapley exerted himself to stop it. People remembered how Hapley had hounded down his rival and forgot that rival's defects. Scathing satire reads ill over fresh mould. The thing provoked comment in the daily papers. It was that made me think you had probably heard of Hapley and this controversy. But, as I have already remarked, scientific workers live very much in a world of their own; half the people, I dare say, who go along Piccadilly to the Academy every year could not tell you where the learned societies abide. Many even think that research is a kind of happy-family cage in which all kinds of men lie down together in peace.

In his private thoughts Hapley could not forgive Pawkins for dying. In the first place, it was a mean dodge to escape the absolute pulverisation Hapley had in hand for him, and in the second, it left Hapley's mind with a queer gap in it. For twenty years he had worked hard, sometimes far into the night, and seven days a week, with microscope, scalpel, collecting-net, and pen, and almost entirely with reference to Pawkins. The European reputation he had won had come as an incident in that great antipathy. He had gradually worked up to a climax in this last controversy. It had killed Pawkins, but it had also thrown Hapley out of gear, so to speak, and his doctor advised him to give up work for a time, and rest. So Hapley went down into a quiet village in Kent, and thought day and night of Pawkins and good things it was now impossible to say about him.

At last Hapley began to realise in what direction the pre-occupation tended. He determined to make a fight for it, and started by trying to read novels. But he could not get his mind off Pawkins, white in the face and making his last speech—every sentence a beautiful opening for Hapley. He turned to fiction—and found it had no grip on him. He read the *Island Nights' Entertainments* until his "sense of causation" was shocked beyond endurance by the Bottle Imp. Then he went to Kipling, and found he "proved nothing" besides being irreverent and vulgar. These scientific people have their limitations. Then unhappily he tried Besant's *Inner House*, and the opening chapter set his mind upon learned societies and Pawkins at once.

So Hapley turned to chess, and found it a little more soothing. He soon mastered the moves and the chief gambits and commoner closing positions, and began to beat the Vicar. But then the cylindrical contours of the opposite king began to resemble Pawkins standing up and gasping ineffectually against checkmate, and Hapley decided to give up chess.

Perhaps the study of some new branch of science would after all be better diversion. The best rest is change of occupation. Hapley determined to plunge at diatoms, and had one of his smaller microscopes and Halibut's monograph sent down from London. He thought that perhaps if he could get up a vigorous quarrel with Halibut, he might be able to begin life afresh and forget Pawkins. And very soon he was hard at work in his habitual strenuous fashion at these microscopic denizens of the wayside pool.

It was on the third day of the diatoms that Hapley became aware of a novel addition to the local fauna. He was working late at the microscope, and the only light in the room was the brilliant little lamp with the special form of green shade. Like all experienced microscopists, he kept both eyes open. It is the only way to avoid excessive fatigue. One eye was over the instrument, and bright and distinct before that was the circular field of the microscope, across which a brown diatom was slowly moving. With the other eye Hapley saw, as it were, without seeing. He was only dimly conscious of the brass side of the instrument, the illuminated part of the tablecloth, a sheet of note-paper, the foot of the lamp, and the darkened room beyond.

Suddenly his attention drifted from one eye to the other. The tablecloth was of the material called tapestry by shopmen, and rather brightly coloured. The pattern was in gold, with a small amount of crimson and pale blue upon a greyish ground. At one point the pattern seemed displaced, and there was a vibrating movement of the colours at this point.

Hapley suddenly moved his head back and looked with both eyes. His mouth fell open with astonishment.

It was a large moth or butterfly ; its wings spread in butterfly fashion !

It was strange it should be in the room at all, for the windows were closed. Strange that it should not have attracted his attention when fluttering to its present position. Strange that it should match the tablecloth. Stranger far that to him, Hapley, the great entomologist, it was altogether unknown. There was no delusion. It was crawling slowly towards the foot of the lamp.

" New Genus, by heavens ! And in England ! " said Hapley, staring.

Then he suddenly thought of Pawkins. Nothing would have maddened Pawkins more. . . . And Pawkins was dead !

Something about the head and body of the insect became singularly suggestive of Pawkins, just as the chess king had been.

" Confound Pawkins ! " said Hapley. " But I must catch this." And looking round him for some means of capturing the moth, he rose slowly out of his chair. Suddenly the insect

rose, struck the edge of the lamp-shade—Hapley heard the “ping”—and vanished into the shadow.

In a moment Hapley had whipped off the shade, so that the whole room was illuminated. The thing had disappeared, but soon his practised eye detected it upon the wall-paper near the door. He went towards it, poisoning the lamp-shade for capture. Before he was within striking distance, however, it had risen and was fluttering round the room. After the fashion of its kind, it flew with sudden starts and turns, seeming to vanish here and reappear there. Once Hapley struck, and missed; then again.

The third time he hit his microscope. The instrument swayed, struck and overturned the lamp, and fell noisily upon the floor. The lamp turned over on the table and, very luckily, went out. Hapley was left in the dark. With a start he felt the strange moth blunder into his face.

It was maddening. He had no lights. If he opened the door of the room the thing would get away. In the darkness he saw Pawkins quite distinctly laughing at him. Pawkins had ever an oily laugh. He swore furiously and stamped his foot on the floor.

There was a timid rapping at the door.

Then it opened, perhaps a foot, and very slowly. The alarmed face of the landlady appeared behind a pink candle flame; she wore a night-cap over her grey hair and had some purple garment over her shoulders. “What *was* that fearful smash?” she said. “Has anything——” The strange moth appeared fluttering about the chink of the door. “Shut that door!” said Hapley, and suddenly rushed at her.

The door slammed hastily. Hapley was left alone in the dark. Then in the pause he heard his landlady scuttle upstairs, lock her door, and drag something heavy across the room and put against it.

It became evident to Hapley that his conduct and appearance had been strange and alarming. Confound the moth! and Pawkins! However, it was a pity to lose the moth now. He felt his way into the hall and found the matches, after sending his hat down upon the floor with a noise like a drum. With the lighted candle he returned to the sitting-room. No moth was to be seen. Yet once for a moment it seemed that the thing was fluttering round his head. Hapley very suddenly decided to give up the moth and go to bed. But he was excited. All night long his sleep was broken by dreams of the moth, Pawkins, and his landlady. Twice in the night he turned out and soured his head in cold water.

One thing was very clear to him. His landlady could not possibly understand about the strange moth, especially as he had failed to catch it. No one but an entomologist would understand quite how he felt. She was probably frightened at his behaviour, and yet he failed to see how he could explain it.

He decided to say nothing further about the events of last night. After breakfast he saw her in her garden, and decided to go out and talk to reassure her. He talked to her about beans and potatoes, bees, caterpillars, and the price of fruit. She replied in her usual manner, but she looked at him a little suspiciously, and kept walking as he walked, so that there was always a bed of flowers, or a row of beans, or something of the sort, between them. After a while he began to feel singularly irritated at this, and, to conceal his vexation, went indoors and presently went out for a walk.

The moth, or butterfly, trailing an odd flavour of Pawkins with it, kept coming into that walk though he did his best to keep his mind off it. Once he saw it quite distinctly, with its wings flattened out, upon the old stone wall that runs along the west edge of the park, but going up to it he found it was only two lumps of grey and yellow lichen. "This," said Hapley, "is the reverse of mimicry. Instead of a butterfly looking like a stone, here is a stone looking like a butterfly!" Once something hovered and fluttered round his head, but by an effort of will he drove that impression out of his mind again.

In the afternoon Hapley called upon the Vicar, and argued with him upon theological questions. They sat in the little arbour covered with brier, and smoked as they wrangled. "Look at that moth!" said Hapley, suddenly, pointing to the edge of the wooden table.

"Where?" said the Vicar.

"You don't see a moth on the edge of the table there?" said Hapley.

"Certainly not," said the Vicar.

Hapley was thunderstruck. He gasped. The Vicar was staring at him. Clearly the man saw nothing. "The eye of faith is no better than the eye of science," said Hapley awkwardly.

"I don't see your point," said the Vicar, thinking it was part of the argument.

That night Hapley found the moth crawling over his counterpane. He sat on the edge of the bed in his shirt-sleeves and reasoned with himself. Was it pure hallucination? He knew he was slipping, and he battled for his sanity with the same silent energy he had formerly displayed against Pawkins. So persistent is mental habit that he felt as if it were still a struggle with Pawkins. He was well versed in psychology. He knew that such visual illusions do come as a result of mental strain. But the point was, he did not only *see* the moth, he had heard it when it touched the edge of the lamp-shade and afterwards when it hit against the wall, and he had felt it strike his face in the dark.

He looked at it. It was not at all dream-like but perfectly clear and solid-looking in the candle-light. He saw the hairy

body and the short feathery antennæ, the jointed legs, even a place where the down was rubbed from the wing. He suddenly felt angry with himself for being afraid of a little insect.

His landlady had got the servant to sleep with her that night, because she was afraid to be alone. In addition she had locked the door and put the chest of drawers against it. They listened and talked in whispers after they had gone to bed, but nothing occurred to alarm them. About eleven they had ventured to put the candle out and had both dozed off to sleep. They woke with a start, and sat up in bed, listening in the darkness.

Then they heard slippered feet going to and fro in Hapley's room. A chair was overturned and there was a violent dab at the wall. Then a china mantel ornament smashed upon the fender. Suddenly the door of the room opened, and they heard him upon the landing. They clung to one another, listening. He seemed to be dancing upon the staircase. Now he would go down three or four steps quickly, then up again, then hurry down into the hall. They heard the umbrella-stand go over, and the fanlight break. Then the bolt shot and the chain rattled. He was opening the door.

They hurried to the window. It was a dim grey night; an almost unbroken sheet of watery cloud was sweeping across the moon, and the hedge and trees in front of the house were black against the pale roadway. They saw Hapley, looking like a ghost in his shirt and white trousers, running to and fro in the road and beating the air. Now he would stop, now he would dart very rapidly at something invisible, now he would move upon it with stealthy strides. At last he went out of sight up the road towards the down. Then while they argued who should go down and lock the door, he returned. He was walking very fast, and he came straight into the house, closed the door carefully, and went quietly up to his bedroom. Then everything was silent.

"Mrs. Colville," said Hapley, calling down the staircase next morning, "I hope I did not alarm you last night."

"You may well ask that!" said Mrs. Colville.

"The fact is, I am a sleep-walker, and the last two nights I have been without my sleeping mixture. There is nothing to be alarmed about, really. I am sorry I made such an ass of myself. I will go over the down to Shoreham, and get some stuff to make me sleep soundly. I ought to have done that yesterday."

But half-way over the down, by the chalk pits, the moth came upon Hapley again. He went on, trying to keep his mind upon chess problems, but it was no good. The thing fluttered into his face, and he struck at it with his hat in self-defence. Then rage, the old rage—the rage he had so often felt against Pawkins—came upon him again. He went on, leaping and

striking at the eddying insect. Suddenly he trod on nothing, and fell headlong.

There was a gap in his sensations, and Hapley found himself sitting on the heap of flints in front of the opening of the chalk-pits, with a leg twisted back under him. The strange moth was still fluttering round his head. He struck at it with his hand, and turning his head saw two men approaching him. One was the village doctor. It occurred to Hapley that this was lucky. Then it came into his mind with extraordinary vividness, that no one would ever be able to see the strange moth except himself, and that it behooved him to keep silent about it.

Late that night, however, after his broken leg was set, he was feverish and forgot his self-restraint. He was lying flat on his bed, and he began to run his eyes round the room to see if the moth was still about. He tried not to do this, but it was no good. He soon caught sight of the thing resting close to his hand, by the night-light, on the green tablecloth. The wings quivered. With a sudden wave of anger he smote at it with his fist, and the nurse woke up with a shriek. He had missed it.

"That moth!" he said; and then: "It was fancy. Nothing!"

All the time he could see quite clearly the insect going round the cornice and darting across the room, and he could also see that the nurse saw nothing of it and looked at him strangely. He must keep himself in hand. He knew he was a lost man if he did not keep himself in hand. But as the night waned the fever grew upon him, and the very dread he had of seeing the moth made him see it. About five, just as the dawn was grey, he tried to get out of bed and catch it, though his leg was afire with pain. The nurse had to struggle with him.

On account of this, they tied him down to the bed. At this the moth grew bolder, and once he felt it settle in his hair. Then, because he struck out violently with his arms, they tied these also. At this the moth came and crawled over his face, and Hapley wept, swore, screamed, prayed for them to take it off him, unavailingly.

The doctor was a blockhead, a just-qualified general practitioner, and quite ignorant of mental science. He simply said there was no moth. Had he possessed the wit, he might still perhaps have saved Hapley from his fate by entering into his delusion, and covering his face with gauze as he prayed might be done. But, as I say, the doctor was a blockhead; and until the leg was healed Hapley was kept tied to his bed, with the imaginary moth crawling over him. It never left him while he was awake and it grew to a monster in his dreams. While he was awake he longed for sleep, and from sleep he awoke screaming.

So now Hapley is spending the remainder of his days in a

padded room, worried by a moth that no one else can see. The asylum doctor calls it hallucination ; but Hapley, when he is in his easier mood and can talk, says it is the ghost of Pawkins, and consequently a unique specimen and well worth the trouble of catching.

STORY EIGHTEEN

THE TREASURE IN THE FOREST

THE canoe was now approaching the land. The bay opened out, and a gap in the white surf of the reef marked where the little river ran out to the sea ; the thicker and deeper green of the virgin forest showed its course down the distant hill slope. The forest here came close to the beach. Far beyond, dim and almost cloudlike in texture, rose the mountains, like suddenly frozen waves. The sea was still save for an almost imperceptible swell. The sky blazed.

The man with the carved paddle stopped. "It should be somewhere here," he said. He shipped the paddle and held his arms out straight before him.

The other man had been in the fore part of the canoe, closely scrutinising the land. He had a sheet of yellow paper on his knee.

"Come and look at this, Evans," he said.

Both men spoke in low tones, and their lips were hard and dry.

The man called Evans came swaying along the canoe until he could look over his companion's shoulder.

The paper had the appearance of a rough map. By much folding it was creased and worn to the pitch of separation, and the second man held the discoloured fragments together where they had parted. On it one could dimly make out, in almost obliterated pencil, the outline of the bay.

"Here," said Evans, "is the reef and here is the gap." He ran his thumb-nail over the chart.

"This curved and twisting line is the river—I could do with a drink now!—and this star is the place."

"You see this dotted line," said the man with the map ; "it is a straight line, and runs from the opening of the reef to a clump of palm-trees. The star comes just where it cuts the river. We must mark the place as we go into the lagoon."

"It's queer," said Evans, after a pause, "what these little marks down here are for. It looks like the plan of a house or something ; but what all these little dashes, pointing this way and that, may mean I can't get a notion. And what's the writing ?"

"Chinese," said the man with the map.

"Of course ! *He* was a Chinese," said Evans.

"They all were," said the man with the map.

They both sat for some minutes staring at the land, while the canoe drifted slowly. Then Evans looked towards the paddle.

"Your turn with the paddle now, Hooker," said he.

And his companion quietly folded up his map, put it in his pocket, passed Evans carefully, and began to paddle. His

movements were languid, like those of a man whose strength was nearly exhausted.

Evans sat with his eyes half closed, watching the frothy breakwater of the coral creep nearer and nearer. The sky was like a furnace now, for the sun was near the zenith. Though they were so near the Treasure he did not feel the exaltation he had anticipated. The intense excitement of the struggle for the plan, and the long night voyage from the mainland in the unprovisioned canoe had, to use his own expression, "taken it out of him." He tried to rouse himself by directing his mind to the ingots the Chinamen had spoken of, but it would not rest there; it came back headlong to the thought of sweet water rippling in the river, and to the almost unendurable dryness of his lips and throat. The rhythmic wash of the sea upon the reef was becoming audible now, and it had a pleasant sound in his ears; the water washed along the side of the canoe, and the paddle dripped between each stroke. Presently he began to doze.

He was still dimly conscious of the island, but a queer dream texture interwove with his sensations. Once again it was the night when he and Hooker had hit upon the Chinamen's secret; he saw the moonlit trees, the little fire burning, and the black figures of the three Chinamen—silvered on one side by moonlight, and on the other glowing from the firelight—and heard them talking together in pigeon-English—for they came from different provinces. Hooker had caught the drift of their talk first, and had motioned to him to listen. Fragments of the conversation were inaudible and fragments incomprehensible. A Spanish galleon from the Philippines hopelessly aground, and its treasure buried against the day of return, lay in the background of the story; a shipwrecked crew thinned by disease, a quarrel or so, and the needs of discipline, and at last taking to their boats never to be heard of again. Then Chang-hi, only a year since, wandering ashore, had happened upon the ingots hidden for two hundred years, had deserted his junk, and reburied them with infinite toil, single-handed but very safe. He laid great stress on the safety—it was a secret of his. Now he wanted help to return and exhume them. Presently the little map fluttered and the voices sank. A fine story for two stranded British wastrels to hear! Evans' dream shifted to the moment when he had Chang-hi's pigtail in his hand. The life of a Chinaman is scarcely sacred like a European's. The cunning little face of Chang-hi, first keen and furious like a startled snake, and then fearful, treacherous, and pitiful, became overwhelmingly prominent in the dream. At the end Chang-hi had grinned, a most incomprehensible and startling grin. Abruptly things became very unpleasant, as they will do at times in dreams. Chang-hi gibbered and threatened him. He saw in his dream heaps and heaps of gold, and Chang-hi intervening and struggling to hold him back from it. He took

Chang-hi by the pigtail—how big the yellow brute was, and how he struggled and grinned! He kept growing bigger, too. Then the bright heaps of gold turned to a roaring furnace, and a vast devil, surprisingly like Chang-hi, but with a huge black tail, began to feed him with coals. They burnt his mouth horribly. Another devil was shouting his name: "Evans, Evans, you sleepy fool!"—or was it Hooker?

He woke up. They were in the mouth of the lagoon.

"There are the three palm-trees. It must be in a line with that clump of bushes," said his companion. "Mark that. If we go to those bushes and then strike into the bush in a straight line from here, we shall come to it when we come to the stream."

They could see now where the mouth of the stream opened out. At the sight of it Evans revived. "Hurry up, man," he said, "or by heaven I shall have to drink sea water!" He gnawed his hand and stared at the gleam of silver among the rocks and green tangle.

Presently he turned almost fiercely upon Hooker. "Give *me* the paddle," he said.

So they reached the river mouth. A little way up Hooker took some water in the hollow of his hand, tasted it, and spat it out. A little farther he tried again. "This will do," he said, and they began drinking eagerly.

"Curse this!" said Evans, suddenly. "It's too slow." And, leaning dangerously over the fore part of the canoe, he began to suck up the water with his lips.

Presently they made an end of drinking, and, running the canoe into a little creek, were about to land among the thick growth that overhung the water.

"We shall have to scramble through this to the beach to find our bushes and get the line to the place," said Evans.

"We had better paddle round," said Hooker.

So they pushed out again into the river and paddled back down it to the sea, and along the shore to the place where the clump of bushes grew. Here they landed, pulled the light canoe far up the beach, and then went up towards the edge of the jungle until they could see the opening of the reef and the bushes in a straight line. Evans had taken a native implement out of the canoe. It was L-shaped, and the transverse piece was armed with polished stone. Hooker carried the paddle. "It is straight now in this direction," said he; "we must push through this till we strike the stream. Then we must prospect."

They pushed through a close tangle of reeds, broad fronds, and young trees, and at first it was toilsome going, but very speedily the trees became larger and the ground beneath them opened out. The blaze of the sunlight was replaced by insensible degrees by cool shadow. The trees became at last vast pillars that rose up to a canopy of greenery far overhead. Dim white flowers hung from their stems, and rosy creepers

swung from tree to tree. The shadow deepened. On the ground, blotched fungi and a red-brown incrustation became frequent.

Evans shivered. "It seems almost cold here after the blaze outside."

"I hope we are keeping to the straight," said Hooker.

Presently they saw, far ahead, a gap in the sombre darkness where white shafts of hot sunlight smote into the forest. There also was brilliant green undergrowth, and coloured flowers. Then they heard the rush of water.

"Here is the river. We should be close to it now," said Hooker.

The vegetation was thick by the river bank. Great plants, as yet unnamed, grew among the roots of the big trees, and spread rosettes of huge green fans towards the strip of sky. Many flowers and a creeper with shiny foliage clung to the exposed stems. On the water of the broad, quiet pool which the treasure seekers now overlooked there floated big oval leaves and a waxen, pinkish-white flower not unlike a water-lily. Farther, as the river bent away from them, the water suddenly frothed and became noisy in a rapid.

"Well?" said Evans.

"We have swerved a little from the straight," said Hooker.

"That was to be expected"

He turned and looked into the dim cool shadows of the silent forest behind them. "If we beat a little way up and down the stream we should come to something."

"You said——" began Evans.

"He said there was a heap of stones," said Hooker.

The two men looked at each other for a moment.

"Let us try a little down-stream first," said Evans.

They advanced slowly, looking curiously about them. Suddenly Evans stopped. "What the devil's that?" he said.

Hooker followed his finger. "Something blue," he said. It had come into view as they topped a gentle swell of the ground. Then he began to distinguish what it was.

He advanced suddenly with hasty steps, until the body that belonged to the limp hand and arm had become visible. His grip tightened on the implement he carried. The thing was the figure of a Chinaman lying on his face. The abandon of the pose was unmistakable.

The two men drew closer together, and stood staring silently at this ominous dead body. It lay in a clear space among the trees. Near by was a spade after the Chinese pattern, and farther off lay a scattered heap of stones, close to a freshly dug hole.

"Somebody has been here before," said Hooker, clearing his throat.

Then suddenly Evans began to swear and rave, and stamp upon the ground.

Hooker turned white but said nothing. He advanced towards the prostrate body. He saw the neck was puffed and purple, and the hands and ankles swollen. "Pah!" he said, and suddenly turned away and went towards the excavation. He gave a cry of surprise. He shouted to Evans, who was following him slowly.

"You fool! It's all right. It's here still." Then he turned again and looked at the dead Chinaman, and then again at the hole.

Evans hurried to the hole. Already half exposed by the ill-fated wretch beside them lay a number of dull yellow bars. He bent down in the hole, and, clearing off the soil with his bare hands, hastily pulled one of the heavy masses out. As he did so a little thorn pricked his hand. He pulled the delicate spike out with his fingers and lifted the ingot.

"Only gold or lead could weigh like this," he said exultantly.

Hooker was still looking at the dead Chinaman. He was puzzled.

"He stole a march on his friends," he said at last. "He came here alone, and some poisonous snake has killed him. . . . I wonder how he found the place."

Evans stood with the ingot in his hands. What did a dead Chinaman signify? "We shall have to take this stuff to the mainland piecemeal, and bury it there for a while. How shall we get it to the canoe?"

He took his jacket off and spread it on the ground, and flung two or three ingots into it. Presently he found that another little thorn had punctured his skin.

"This is as much as we can carry," said he. Then suddenly, with a queer rush of irritation, "What are you staring at?"

Hooker turned to him. "I can't stand . . . him." He nodded towards the corpse. "It's so like——"

"Rubbish!" said Evans. "All Chinaman are alike."

Hooker looked into his face. "I'm going to bury *that*, anyhow, before I lend a hand with this stuff."

"Don't be a fool, Hooker," said Evans. "Let that mass of corruption bide."

Hooker hesitated, and then his eye went carefully over the brown soil about them. "It scares me somehow," he said.

"The thing is," said Evans, "what to do with these ingots. Shall we re-bury them over here, or take them across the strait in the canoe?"

Hooker thought. His puzzled gaze wandered among the tall tree-trunks, and up into the remote sunlit greenery overhead. He shivered again as his eye rested upon the blue figure of the Chinaman. He stared searchingly among the grey depths between the trees.

"What's come to you, Hooker?" said Evans. "Have you lost your wits?"

"Let's get the gold out of this place, anyhow," said Hooker.

He took the ends of the collar of the coat in his hands, and Evans took the opposite corners, and they lifted the mass. "Which way?" said Evans. "To the canoe?"

"It's queer," said Evans, when they had advanced only a few steps, "but my arms ache still with that paddling. . . ."

"Curse it!" he said. "But they ache! I must rest."

They let the coat down. Evans' face was white, and little drops of sweat stood out upon his forehead. "It's stuffy, somehow, in this forest."

Then with an abrupt transition to unreasonable anger: "What is the good of waiting here all the day? Lend a hand, I say! You have done nothing but moon since we saw the dead Chinaman."

Hooker was looking steadfastly at his companion's face. He helped raise the coat bearing the ingots, and they went forward perhaps a hundred yards in silence. Evans began to breathe heavily. "Can't you speak?" he said.

"What's the matter with you?" said Hooker.

Evans stumbled, and then with a sudden curse flung the coat from him. He stood for a moment staring at Hooker, and then with a groan clutched at his own throat.

"Don't come near me," he said, and went and leant against a tree. Then in a steadier voice, "I'll be better in a minute."

Presently his grip upon the trunk loosened, and he slipped slowly down the stem of the tree until he was a crumpled heap at its foot. His hands were clenched convulsively. His face became distorted with pain. Hooker approached him.

"Don't touch me! Don't touch me!" said Evans in a stifled voice. "Put the gold back on the coat."

"Can't I do anything for you?" said Hooker.

"Put the gold back on the coat."

As Hooker handled the ingots he felt a little prick on the ball of his thumb. He looked at his hand and saw a slender thorn, perhaps two inches in length.

Evans gave an inarticulate cry and rolled over.

Hooker's jaw dropped. He stared at the thorn for a moment with dilated eyes. Then he looked at Evans, who was now crumpled together on the ground, his back bending and straitening spasmodically. Then he looked through the pillars of the trees and net-work of creeper stems, to where in the dim grey shadow the blue-clad body of the Chinaman was still indistinctly visible. He thought of the little dashes in the corner of the plan, and in a moment he understood.

"God help me!" he said. For the thorns were similar to those the Dyaks poison and use in their blowing-tubes. He understood now what Chang-hi's assurance of the safety of his treasure meant. He understood that grin now.

"Evans!" he cried.

But Evans was silent and motionless now, save for a horrible

spasmodic twitching of his limbs. A profound silence brooded over the forest.

Then Hooker began to suck furiously at the little pink spot on the ball of his thumb—sucking for dear life. Presently he felt a strange aching pain in his arms and shoulders, and his fingers seemed difficult to bend. Then he knew that sucking was no good.

Abruptly he stopped, and sitting down by the pile of ingots, and resting his chin upon his hands and his elbows upon his knees, stared at the distorted but still stirring body of his companion. Chang-hi's grin came in his mind again. The dull pain spread towards his throat and grew slowly in intensity. Far above him a faint breeze stirred the greenery, and the white petals of some unknown flower came floating down through the gloom.

STORY NINETEEN

THE ARGONAUTS OF THE AIR

ONE saw Monson's Flying Machine from the windows of the trains passing either along the South-Western main line or along the line between Wimbledon and Worcester Park—to be more exact, one saw the huge scaffoldings which limited the flight of the apparatus. They rose over the tree-tops, a massive alley of interlacing iron and timber, and an enormous web of ropes and tackle, extending the best part of two miles. From the Leatherhead branch this alley was foreshortened and in part hidden by a hill with villas ; but from the main line one had it in profile, a complex tangle of girders and curving bars, very impressive to the excursionists from Portsmouth and Southampton and the West. Monson had taken up the work where Maxim had left it, had gone on at first with an utter contempt for the journalistic wit and ignorance that had irritated and hampered his predecessor, and had spent (it was said) rather more than half his immense fortune upon his experiments. The results, to an impatient generation, seemed inconsiderable. When some five years had passed after the growth of the colossal iron groves at Worcester Park, and Monson still failed to put in a fluttering appearance over Trafalgar Square, even the Isle of Wight trippers felt their liberty to smile. And such intelligent people as did not consider Monson a fool stricken with the mania for invention, denounced him as being (for no particular reason) a self-advertising quack.

Yet now and again a morning trainload of season-ticket holders would see a white monster rush headlong through the airy tracery of guides and bars, and hear the further stays, nettings, and buffers snap, creak, and groan with the impact of the blow. Then there would be an efflorescence of black-set, white-rimmed faces along the sides of the train, and the morning papers would be neglected for a vigorous discussion of the possibility of flying (in which nothing new was ever said by any chance), until the train reached Waterloo, and its cargo of season-ticket holders dispersed themselves over London. Or the fathers and mothers in some multitudinous train of weary excursionists returning exhausted from a day of rest by the sea, would find the dark fabric, standing out against the evening sky, useful in diverting some bilious child from its introspection, and be suddenly startled by the swift transit of a huge black flapping shape that strained upward against the guides. It was a great and forcible thing beyond dispute, and excellent for conversation ; yet, all the same, it was but flying

in leading-strings, and most of those who witnessed it scarcely counted its flight as flying. More of a switchback it seemed to the run of the folk.

Monson, I say, did not trouble himself very keenly about the opinions of the press at first. But possibly he, even, had formed but a poor idea of the time it would take before the tactics of flying were mastered, the swift assured adjustment of the big soaring shape to every gust and chance movement of the air; nor had he clearly reckoned the money this prolonged struggle against gravitation would cost him. And he was not so pachydermatous as he seemed. Secretly he had his periodical bundles of cuttings sent him by Romeike, he had his periodical reminders from his banker; and if he did not mind the initial ridicule and scepticism, he felt the growing neglect as the months went by and the money dribbled away. Time was when Monson had sent the enterprising journalist, keen after readable matter, empty from his gates. But when the enterprising journalist ceased from troubling, Monson was anything but satisfied in his heart of hearts. Still day by day the work went on, and the multitudinous subtle difficulties of the steering diminished in number. Day by day, too, the money trickled away, until his balance was no longer a matter of hundreds of thousands, but of tens. And at last came an anniversary.

Monson, sitting in the little drawing-shed, suddenly noticed the date on Woodhouse's calendar.

"It was five years ago to-day that we began," he said to Woodhouse suddenly.

"Is it?" said Woodhouse.

"It's the alterations play the devil with us," said Monson, biting a paper-fastener.

The drawings for the new vans to the hinder screw lay on the table before him as he spoke. He pitched the mutilated brass paper-fastener into the waste-paper basket and drummed with his fingers. "These alterations! Will the mathematicians ever be clever enough to save us all this patching and experimenting? Five years—learning by rule of thumb, when one might think that it was possible to calculate the whole thing out beforehand. The cost of it! I might have hired three senior wranglers for life. But they'd only have developed some beautifully useless theorems in pneumatics. What a time it has been, Woodhouse!"

"These mouldings will take three weeks," said Woodhouse. "At special prices."

"Three weeks!" said Monson, and sat drumming.

"Three weeks certain," said Woodhouse, an excellent engineer, but no good as a comforter. He drew the sheets towards him and began shading a bar.

Monson stopped drumming, and began to bite his fingernails, staring the while at Woodhouse's head.

"How long have they been calling this Monson's Folly?" he said suddenly.

"Oh! Year or so," said Woodhouse carelessly, without looking up.

Monson sucked the air in between his teeth, and went to the window. The stout iron columns carrying the elevated rails upon which the start of the machine was made rose up close by, and the machine was hidden by the upper edge of the window. Through the grove of iron pillars, red painted and ornate with rows of bolts, one had a glimpse of the pretty scenery towards Esher. A train went gliding noiselessly across the middle distance, its rattle drowned by the hammering of the workmen overhead. Monson could imagine the grinning faces at the windows of the carriages. He swore savagely under his breath, and dabbed viciously at a blowfly that suddenly became noisy on the window-pane.

"What's up?" said Woodhouse, staring in surprise at his employer.

"I'm about sick of this."

Woodhouse scratched his cheek. "Oh!" he said, after an assimilating pause. He pushed the drawing away from him.

"Here these fools . . . I'm trying to conquer a new element—trying to do a thing that will revolutionise life. And instead of taking an intelligent interest, they grin and make their stupid jokes, and call me and my appliances names."

"Asses!" said Woodhouse, letting his eye fall again on the drawing.

The epithet, curiously enough, made Monson wince. "I'm about sick of it, Woodhouse, anyhow," he said, after a pause.

Woodhouse shrugged his shoulders.

"There's nothing for it but patience, I suppose," said Monson, sticking his hands in his pockets. "I've started. I've made my bed, and I've got to lie on it. I can't go back. I'll see it through, and spend every penny I have and every penny I can borrow. But I tell you, Woodhouse, I'm infernally sick of it, all the same. If I'd paid a tenth part of the money towards some political greaser's expenses—I'd have been a baronet before this."

Monson paused. Woodhouse stared in front of him with a blank expression he always employed to indicate sympathy, and tapped his pencil-case on the table. Monson stared at him for a minute.

"Oh, *damn*!" said Monson suddenly, and abruptly rushed out of the room.

Woodhouse continued his sympathetic rigour for perhaps half a minute. Then he sighed and resumed the shading of the drawings. Something had evidently upset Monson. Nice chap, and generous, but difficult to get on with. It was the way with every amateur who had anything to do with engineering—wanted everything finished at once. But Monson had

usually the patience of the expert. Odd he was so irritable. Nice and round that aluminium rod did look now! Woodhouse threw back his head, and put it, first this side and then that, to appreciate his bit of shading better.

"Mr. Woodhouse," said Hooper, the foreman of the labourers, putting his head in at the door.

"Hullo!" said Woodhouse, without turning round.

"Nothing happened, sir?" said Hooper.

"Happened?" said Woodhouse.

"The governor just been up the rails swearing like a tornader."

"Oh!" said Woodhouse.

"It ain't like him, sir."

"No?"

"And I was thinking perhaps——"

"Don't think," said Woodhouse, still admiring the drawings.

Hooper knew Woodhouse, and he shut the door suddenly with a vicious slam. Woodhouse stared stonily before him for some further minutes, and then made an ineffectual effort to pick his teeth with his pencil. Abruptly he desisted, pitched that old, tried, and stumpy servitor across the room, got up, stretched himself, and followed Hooper.

He looked ruffled—it was visible to every workman he met. When a millionaire who has been spending thousands on experiments that employ quite a little army of people suddenly indicates that he is sick of the undertaking, there is almost invariably a certain amount of mental friction in the ranks of the little army he employs. And even before he indicates his intentions there are speculations and murmurs, a watching of faces and a study of straws. Hundreds of people knew before the day was out that Monson was ruffled, Woodhouse ruffled, Hooper ruffled. A workman's wife, for instance (whom Monson had never seen), decided to keep her money in the savings-bank instead of buying a velvetene dress. So far-reaching are even the casual curses of a millionaire.

Monson found a certain satisfaction in going on the works and behaving disagreeably to as many people as possible. After a time even that palled upon him, and he rode off the grounds, to every one's relief there, and through the lanes south-eastward, to the infinite tribulation of his house steward at Cheam.

And the immediate cause of it all, the little grain of annoyance that had suddenly precipitated all this discontent with his life-work was—these trivial things that direct all our great decisions!—half a dozen ill-considered remarks made by a pretty girl, prettily dressed, with a beautiful voice and something more than prettiness in her soft grey eyes. And of these half-dozen remarks, two words especially—"Monson's Folly." She had felt she was behaving charmingly to Monson; she reflected the next day how exceptionally effective she had been,

and no one would have been more amazed than she, had she learned the effect she had left on Monson's mind. I hope, considering everything, that she never knew.

"How are you getting on with your flying-machine?" she asked. ("I wonder if I shall ever meet any one with the sense not to ask that," thought Monson.) "It will be very dangerous at first, will it not?" ("Thinks I'm afraid.") "Jorgon is going to play presently; have you heard him before?" ("My mania being attended to, we turn to rational conversation.") Gush about Jorgon; gradual decline of conversation, ending with—"You must let me know when your flying-machine is finished, Mr. Monson, and then I will consider the advisability of taking a ticket." ("One would think I was still playing inventions in the nursery.") But the bitterest thing she said was not meant for Monson's ears. To Phlox, the novelist, she was always conscientiously brilliant. "I have been talking to Mr. Monson, and he can think of nothing, positively nothing, but that flying-machine of his. Do you know, all his workmen call that place of his 'Monson's Folly'?" He is quite impossible. It is really very, very sad. I always regard him myself in the light of sunken treasure—the Lost Millionaire, you know."

She was pretty and well educated—indeed, she had written an epigrammatic novelette; but the bitterness was that she was typical. She summarised what the world thought of the man who was working sanely, steadily, and surely towards a more tremendous revolution in the appliances of civilisation, a more far-reaching alteration in the ways of humanity than has ever been effected since history began. They did not even take him seriously. In a little while he would be proverbial. "I *must* fly now," he said on his way home, smarting with a sense of absolute social failure. "I must fly soon. If it doesn't come off soon, by God! I shall run amuck."

He said that before he had gone through his pass-book and his litter of papers. Inadequate as the cause seems, it was that girl's voice and the expression of her eyes that precipitated his discontent. But certainly the discovery that he had no longer even one hundred thousand pounds' worth of realisable property behind him was the poison that made the wound deadly.

It was the next day after this that he exploded upon Woodhouse and his workmen, and thereafter his bearing was consistently grim for three weeks, and anxiety dwelt in Cheam and Ewell, Malden, Morden, and Worcester Park, places that had thriven mightily on his experiments.

Four weeks after that first swearing of his, he stood with Woodhouse by the reconstructed machine as it lay across the elevated railway, by means of which it gained its initial impetus. The new propeller glittered a brighter white than the rest of the machine, and a gilder, obedient to a whim of

Monson's, was picking out the aluminium bars with gold. And looking down the long avenue between the ropes (gilded now with the sunset), one saw red signals, and two miles away an ant-hill of workmen busy altering the last falls of the run into a rising slope.

"I'll *come*," said Woodhouse. "I'll come right enough. But I tell you it's infernally foolhardy. If only you would give another year——"

"I tell you I won't. I tell you the thing works. I've given years enough——"

"It's not that," said Woodhouse. "We're all right with the machine. But it's the steering——"

"Haven't I been rushing, night and morning, backwards and forwards, through this squirrel's cage? If the thing steers true here, it will steer true all across England. It's just funk, I tell you, Woodhouse. We could have gone a year ago. And besides——"

"Well?" said Woodhouse.

"The money!" snapped Monson over his shoulder.

"Hang it! I never thought of the money," said Woodhouse, and then, speaking now in a very different tone to that with which he had said the words before, he repeated, "I'll come. Trust me."

Monson turned suddenly, and saw all that Woodhouse had not the dexterity to say, shining on his sunset-lit face. He looked for a moment, then impulsively extended his hand. "Thanks," he said.

"All right," said Woodhouse, gripping the hand, and with a queer softening of his features. "Trust me."

Then both men turned to the big apparatus that lay with its flat wings extended upon the carrier, and stared at it meditatively. Monson, guided perhaps by a photographic study of the flight of birds, and by Lilienthal's methods, had gradually drifted from Maxim's shapes towards the bird form again. The thing, however, was driven by a huge screw behind in the place of the tail; and so hovering, which needs an almost vertical adjustment of a flat tail, was rendered impossible. The body of the machine was small, almost cylindrical, and pointed. Forward and aft on the pointed ends were two small petroleum engines for the screw, and the navigators sat deep in a canoe-like recess, the foremost one steering, and being protected by a low screen, with two plate-glass windows, from the blinding rush of air. On either side a monstrous flat framework with a curved front border could be adjusted so as either to lie horizontally, or to be tilted upward or down. These wings worked rigidly together, or, by releasing a pin, one could be tilted through a small angle independently of its fellow. The front edge of either wing could also be shifted back so as to diminish the wing-area about one-sixth. The machine was not only not designed to hover,

but it was also incapable of fluttering. Monson's idea was to get into the air with the initial rush of the apparatus, and then to skim, much as a playing-card may be skimmed, keeping up the rush by means of the screw at the stern. Rooks and gulls fly enormous distances in that way with scarcely a perceptible movement of the wings. The bird really drives along on an aerial switchback. It glides slanting downward for a space, until it has gained considerable momentum, and then altering the inclination of its wings, glides up again almost to its original altitude. Even a Londoner who has watched the birds in the aviary in Regent's Park knows that.

But the bird is practising this art from the moment it leaves its nest. It has not only the perfect apparatus, but the perfect instinct to use it. A man off his feet has the poorest skill in balancing. Even the simple trick of the bicycle costs him some hours of labour. The instantaneous adjustments of the wings, the quick response to a passing breeze, the swift recovery of equilibrium, the giddy, eddying movements that require such absolute precision—all that he must learn, learn with infinite labour and infinite danger, if ever he is to conquer flying. The flying-machine that will start off some fine day, driven by neat "little levers," with a nice open deck like a liner, and all loaded up with bombshells and guns, is the easy dreaming of a literary man. In lives and in treasure the cost of the conquest of the empire of the air may even exceed all that has been spent in man's great conquest of the sea. Certainly it will be costlier than the greatest war that has ever devastated the world.

No one knew these things better than these two practical men. And they knew they were in the front rank of the coming army. Yet there is hope even in a forlorn hope. Men are killed outright in the reserves sometimes, while others who have been left for dead in the thickest corner crawl out and survive.

"If we miss these meadows"—said Woodhouse presently in his slow way.

"My dear chap," said Monson, whose spirits had been rising fitfully during the last few days, "we mustn't miss these meadows. There's a quarter of a square mile for us to hit, fences removed, ditches levelled. We shall come down all right—rest assured. And if we don't——"

"Ah!" said Woodhouse. "If we don't!"

Before the day of the start, the newspaper people got wind of the alterations at the northward end of the framework, and Monson was cheered by a decided change in the comments Romeike forwarded him. "He will be off some day," said the papers. "He will be off some day," said the South-Western season-ticket holders one to another; the seaside excursionists, the Saturday-to-Monday trippers from Sussex

and Hampshire and Dorset and Devon, the eminent literary people from Haslemere, all remarked eagerly one to another, "He will be off some day," as the familiar scaffolding came in sight. And actually, one bright morning, in full view of the ten-past-ten train from Basingstoke, Monson's flying-machine started on its journey.

They saw the carrier running swiftly along its rail, and the white and gold screw spinning in the air. They heard the rapid rumble of wheels, and a thud as the carrier reached the buffers at the end of its run. Then a whirr as the Flying-Machine was shot forward into the networks. All that the majority of them had seen and heard before. The thing went with a drooping flight through the framework and rose again, and then every beholder shouted, or screamed, or yelled, or shrieked after his kind. For instead of the customary concussion and stoppage, the Flying Machine flew out of its five years' cage like a bolt from a crossbow, and drove slantingly upward into the air, curved round a little, so as to cross the line, and soared in the direction of Wimbledon Common.

It seemed to hang momentarily in the air and grow smaller, then it ducked and vanished over the clustering blue tree-tops to the east of Coombe Hill, and no one stopped staring and gasping until long after it had disappeared.

That was what the people in the train from Basingstoke saw. If you had drawn a line down the middle of that train, from engine to guard's van, you would not have found a living soul on the opposite side to the flying-machine. It was a mad rush from window to window as the thing crossed the line. And the engine-driver and stoker never took their eyes off the low hills about Wimbledon, and never noticed that they had run clean through Coombe and Malden and Raynes Park, until, with returning animation, they found themselves pelting, at the most indecent pace, into Wimbledon station.

From the moment when Monson had started the carrier with a "*Now!*" neither he nor Woodhouse said a word. Both men sat with clenched teeth. Monson had crossed the line with a curve that was too sharp, and Woodhouse had opened and shut his white lips; but neither spoke. Woodhouse simply gripped his seat, and breathed sharply through his teeth, watching the blue country to the west rushing past, and down, and away from him. Monson knelt at his post forward, and his hands trembled on the spoked wheel that moved the wings. He could see nothing before him but a mass of white clouds in the sky.

The machine went slanting upward, travelling with an enormous speed still, but losing momentum every moment. The land ran away underneath with diminishing speed.

"*Now!*" said Woodhouse at last, and with a violent effort Monson wrenched over the wheel and altered the angle of the wings. The machine seemed to hang for half a minute

motionless in mid-air, and then he saw the hazy blue house-covered hills of Kilburn and Hampstead jump up before his eyes and rise steadily, until the little sunlit dome of the Albert Hall appeared through his windows. For a moment he scarcely understood the meaning of this upward rush of the horizon, but as the nearer and nearer houses came into view, he realised what he had done. He had turned the wings over too far, and they were swooping steeply downward towards the Thames.

The thought, the question, the realisation were all the business of a second of time. "Too much!" gasped Woodhouse. Monson brought the wheel half-way back with a jerk, and forthwith the Kilburn and Hampstead ridge dropped again to the lower edge of his windows. They had been a thousand feet above Coombe and Malden station; fifty seconds after they whizzed, at a frightful pace, not eighty feet above the East Putney station, on the Metropolitan District line, to the screaming astonishment of a platformful of people. Monson flung up the vans against the air, and over Fulham they rushed up their atmospheric switchback again, steeply—too steeply. The buses went floundering across the Fulham Road, the people yelled.

Then down again, too steeply still, and the distant trees and houses about Primrose Hill leapt up across Monson's window, and then suddenly he saw straight before him the greenery of Kensington Gardens and the towers of the Imperial Institute. They were driving straight down upon South Kensington. The pinnacles of the Natural History Museum rushed up into view. There came one fatal second of swift thought, a moment of hesitation. Should he try to clear the towers, or swerve eastward?

He made a hesitating attempt to release the right wing, left the catch half released, and gave a frantic clutch at the wheel.

The nose of the machine seemed to leap up before him. The wheel pressed his hand with irresistible force, and jerked itself out of his control.

Woodhouse, sitting crouched together, gave a hoarse cry, and sprang up towards Monson. "Too far!" he cried, and then he was clinging to the gunwale for dear life, and Monson had been jerked clean overhead, and was falling backwards upon him.

So swiftly had the thing happened that barely a quarter of the people going to and fro in Hyde Park, and Brompton Road, and the Exhibition Road saw anything of the aerial catastrophe. A distant winged shape had appeared above the clustering houses to the south, had fallen and risen, growing larger as it did so; had swooped swiftly down towards the Imperial Institute, a broad spread of flying wings, had swept round in a quarter circle, dashed eastward, and then suddenly sprang vertically into the air. A black object shot

out of it, and came spinning downward. A man ! Two men clutching each other ! They came whirling down, separated as they struck the roof of the Students' Club, and bounded off into the green bushes on its southward side.

For perhaps half a minute, the pointed stem of the big machine still pierced vertically upward, the screw spinning desperately. For one brief instant, that yet seemed an age to all who watched, it had hung motionless in mid-air. Then a spout of yellow flame licked up its length from the stern engine, and swift, swifter, swifter, and flaring like a rocket, it rushed down upon the solid mass of masonry which was formerly the Royal College of Science. The big screw of white and gold touched the parapet, and crumpled up like wet linen. Then the blazing spindle-shaped body smashed and splintered, smashing and splintering in its fall, upon the north-westward angle of the building.

But the crash, the flame of blazing paraffin that shot heavenward from the shattered engines of the machine, the crushed horrors that were found in the garden beyond the Students' Club, the masses of yellow parapet and red brick that fell headlong into the roadway, the running to and fro of people like ants in a broken ant-hill, the galloping of fire-engines, the gathering of crowds—all these things do not belong to this story, which was written only to tell how the first of all successful flying-machines was launched and flew. Though he failed, and failed disastrously, the record of Monson's work remains—a sufficient monument—to guide the next of that band of gallant experimentalists who will sooner or later master this great problem of flying. And between Worcester Park and Malden there still stands that portentous avenue of iron-work, rusting now, and dangerous here and there, to witness to the first desperate struggle for man's right of way through the air.

STORY TWENTY

THE STORY OF THE LATE MR. ELVESHAM

I SET this story down, not expecting it will be believed, but, if possible, to prepare a way of escape for the next victim. He perhaps may profit by my misfortune. My own case, I know, is hopeless, and I am now in some measure prepared to meet my fate.

My name is Edward George Eden. I was born at Trentham, in Staffordshire, my father being employed in the gardens there. I lost my mother when I was three years old and my father when I was five, my uncle, George Eden, then adopting me as his own son. He was a single man, self-educated, and well-known in Birmingham as an enterprising journalist; he educated me generously, fired my ambition to succeed in the world, and at his death, which happened four years ago, left me his entire fortune, a matter of about five hundred pounds after all outgoing charges were paid. I was then eighteen. He advised me in his will to expend the money in completing my education. I had already chosen the profession of medicine, and through his posthumous generosity, and my good fortune in a scholarship competition, I became a medical student at University College, London. At the time of the beginning of my story I lodged at 11A University Street, in a little upper room, very shabbily furnished, and draughty, overlooking the back of Shoolbred's premises. I used this little room both to live in and sleep in, because I was anxious to eke out my means to the very last shillingsworth.

I was taking a pair of shoes to be mended at a shop in the Tottenham Court Road when I first encountered the little old man with the yellow face, with whom my life has now become so inextricably entangled. He was standing on the kerb, and staring at the number on the door in a doubtful way, as I opened it. His eyes—they were dull grey eyes, and reddish under the rims—fell to my face, and his countenance immediately assumed an expression of corrugated amiability.

"You come," he said, "apt to the moment. I had forgotten the number of your house. How do you do, Mr. Eden?"

I was a little astonished at his familiar address, for I had never set eyes on the man before. I was annoyed, too, at his catching me with my boots under my arm. He noticed my lack of cordiality.

"Wonder who the deuce I am, eh? A friend, let me assure you. I have seen you before, though you haven't seen me. Is there anywhere where I can talk to you?"

I hesitated. The shabbiness of my room upstairs was not a matter for every stranger. "Perhaps," said I, "we might

walk down the street. I'm unfortunately prevented——" My gesture explained the sentence before I had spoken it.

"The very thing," he said, and faced this way and then that. "The street? Which way shall we go?" I slipped my boots down in the passage. "Look here!" he said abruptly; "this business of mine is a rigmarole. Come and lunch with me, Mr. Eden. I'm an old man, a very old man, and not good at explanations, and what with my piping voice and the clatter of the traffic——"

He laid a persuasive skinny hand that trembled a little upon my arm.

I was not so old that an old man might not treat me to a lunch. Yet at the same time I was not altogether pleased by this abrupt invitation. "I had rather——" I began. "But I had rather," he said, catching me up, "and a certain civility is surely due to my grey hairs." And so I consented, and went away with him.

He took me to Blavitski's; I had to walk slowly to accommodate myself to his paces; and over such a lunch as I had never tasted before, he fended off my leading questions, and I took a better note of his appearance. His clean-shaven face was lean and wrinkled, his shrivelled lips fell over a set of false teeth, and his white hair was thin and rather long; he seemed small to me—though, indeed, most people seemed small to me—and his shoulders were rounded and bent. And, watching him, I could not help but observe that he too was taking note of me, running his eyes, with a curious touch of greed in them, over me from my broad shoulders to my sun-tanned hands and up to my freckled face again. "And now," said he, as we lit our cigarettes, "I must tell you of the business in hand.

"I must tell you, then, that I am an old man, a very old man." He paused momentarily. "And it happens that I have money that I must presently be leaving, and never a child have I to leave it to." I thought of the confidence trick, and resolved I would be on the alert for the vestiges of my five hundred pounds. He proceeded to enlarge on his loneliness, and the trouble he had to find a proper disposition of his money. "I have weighed this plan and that plan, charities, institutions, and scholarships, and libraries, and I have come to this conclusion at last"—he fixed his eyes on my face—"that I will find some young fellow, ambitious, pure-minded, and poor, healthy in body and healthy in mind, and, in short, make him my heir, give him all that I have." He repeated, "Give him all that I have. So that he will suddenly be lifted out of all the trouble and struggle in which his sympathies have been educated, to freedom and influence."

I tried to seem disinterested. With a transparent hypocrisy, I said, "And you want my help, my professional services maybe, to find that person."

He smiled and looked at me over his cigarette, and I laughed at his quiet exposure of my modest pretence.

"What a career such a man might have!" he said. "It fills me with envy to think how I have accumulated that another man may spend——"

"But there are conditions, of course, burdens to be imposed. He must, for instance, take my name. You cannot expect everything without some return. And I must go into all the circumstances of his life before I can accept him. He *must* be sound. I must know his heredity, how his parents and grandparents died, have the strictest inquiries made into his private morals——"

This modified my secret congratulations a little. "And do I understand," said I, "that I——?"

"Yes," he said, almost fiercely. "You. *You*."

I answered never a word. My imagination was dancing wildly, my innate scepticism was useless to modify its transports. There was not a particle of gratitude in my mind—I did not know what to say nor how to say it. "But why me in particular?" I said at last.

He had chanced to hear of me from Professor Haslar, he said, as a typically sound and sane young man, and he wished, as far as possible, to leave his money where health and integrity were assured.

That was my first meeting with the little old man. He was mysterious about himself; he would not give his name yet, he said, and after I had answered some questions of his, he left me at the Blavitski portal. I noticed that he drew a handful of gold coins from his pocket when it came to paying for the lunch. His insistence upon bodily health was curious. In accordance with an arrangement we had made I applied that day for a life policy in the Loyal Insurance Company for a large sum, and I was exhaustively overhauled by the medical advisers of that company in the subsequent week. Even that did not satisfy him, and he insisted I must be re-examined by the great Doctor Henderson. It was Friday in Whitsun week before he came to a decision. He called me down quite late in the evening—nearly nine it was—from cramming chemical equations for my Preliminary Scientific examination. He was standing in the passage under the feeble gas-lamp, and his face was a grotesque interplay of shadows. He seemed more bowed than when I had first seen him, and his cheeks had sunk in a little.

His voice shook with emotion. "Everything is satisfactory, Mr. Eden," he said. "Everything is quite, quite satisfactory. And this night of all nights, you must dine with me and celebrate your—accession." He was interrupted by a cough. "You won't have long to wait, either," he said, wiping his handkerchief across his lips, and gripping my hand with his long bony claw that was disengaged. "Certainly not very long to wait."

We went into the street and called a cab. I remember every incident of that drive vividly, the swift easy motion, the contrast of gas and oil and electric light, the crowds of people in the streets, the place in Regent Street to which we went, and the sumptuous dinner we were served with there. I was disconcerted at first by the well-dressed waiter's glances at my rough clothes, bothered by the stones of the olives, but as the champagne warmed my blood, my confidence revived. At first the old man talked of himself. He had already told me his name in the cab; he was Egbert Elvesham, the great philosopher, whose name I had known since I was a lad at school. It seemed incredible to me that this man, whose intelligence had so early dominated mine, this great abstraction, should suddenly realise itself as this decrepit, familiar figure. I dare say every young fellow who has suddenly fallen among celebrities has felt something of my disappointment. He told me now of the future that the feeble streams of his life would presently leave dry for me, houses, copyrights, investments; I had never suspected that philosophers were so rich. He watched me drink and eat with a touch of envy. "What a capacity for living you have!" he said; and then, with a sigh, a sigh of relief I could have thought it, "It will not be long."

"Ay," said I, my head swimming now with champagne; "I have a future perhaps—of a fairly agreeable sort, thanks to you. I shall now have the honour of your name. But you have a past. Such a past as is worth all my future."

He shook his head and smiled, as I thought with half-sad appreciation of my flattering admiration. "That future," he said; "would you in truth change it?" The waiter came with liqueurs. "You will not perhaps mind taking my name, taking my position, but would you indeed—willingly—take my years?"

"With your achievements," said I gallantly.

He smiled again. "Kümmel—both," he said to the waiter, and turned his attention to a little paper packet he had taken from his pocket. "This hour," said he, "this after-dinner hour is the hour of small things. Here is a scrap of my unpublished wisdom." He opened the packet with his shaking yellow fingers, and showed a little pinkish powder on the paper. "This," said he—"well, you must guess what it is. But Kümmel—put but a dash of this powder in it—is Himmel." His large greyish eyes watched mine with an inscrutable expression.

It was a bit of a shock to me to find this great teacher gave his mind to the flavour of liqueurs. However, I feigned a great interest in his weakness, for I was drunk enough for such small sycophancy.

He parted the powder between the little glasses, and rising suddenly with a strange unexpected dignity, held out his hand towards me. I imitated his action, and the glasses rang. "To

a quick succession," said he, and raised his glass towards his lips.

"Not that," I said hastily. "Not that."

He paused, with the liqueur at the level of his chin, and his eyes blazing into mine.

"To a long life," said I.

He hesitated. "To a long life," said he, with a sudden bark of laughter, and with eyes fixed on one another we tilted the little glasses. His eyes looked straight into mine, and as I drained the stuff off, I felt a curiously intense sensation. The first touch of it set my brain in a furious tumult; I seemed to feel an actual physical stirring in my skull, and a seething humming filled my ears. I did not notice the flavour in my mouth, the aroma that filled my throat; I saw only the grey intensity of his gaze that burnt into mine. The draught, the mental confusion, the noise and stirring in my head, seemed to last an interminable time. Curious vague impressions of half-forgotten things danced and vanished on the edge of my consciousness. At last he broke the spell. With a sudden explosive sigh he put down his glass.

"Well?" he said.

"It's glorious," said I, though I had not tasted the stuff.

My head was spinning. I sat down. My brain was chaos. Then my perception grew clear and minute as though I saw things in a concave mirror. His manner seemed to have changed into something nervous and hasty. He pulled out his watch and grimaced at it. "Eleven-seven! And to-night I must—Seven—twenty-five. Waterloo! I must go at once." He called for the bill, and struggled with his coat. Official waiters came to our assistance. In another moment I was wishing him good-bye over the apron of a cab, and still with an absurd feeling of minute distinctness, as though—how can I express it?—I not only saw but *felt* through an inverted opera-glass.

"That stuff," he said. He put his hand to his forehead. "I ought not to have given it to you. It will make your head split to-morrow. Wait a minute. Here." He handed me out a little flat thing like a seidlitz-powder. "Take that in water as you are going to bed. The other thing was a drug. Not till you're ready to go to bed, mind. It will clear your head. That's all. One more shake—Futurus!"

I gripped his shrivelled claw. "Good-bye," he said, and by the droop of his eyelids I judged he too was a little under the influence of that brain-twisting cordial.

He recollected something else with a start, felt in his breast-pocket, and produced another packet, this time a cylinder the size and shape of a shaving-stick. "Here," said he. "I'd almost forgotten. Don't open this until I come to-morrow—but take it now."

It was so heavy that I well-nigh dropped it. "All ri'!"

said I, and he grinned at me through the cab window as the cabman flicked his horse into wakefulness. It was a white packet he had given me, with red seals at either end and along its edge. "If this isn't money," said I, "it's platinum or lead."

I stuck it with elaborate care into my pocket, and with a whirling brain walked home through the Regent Street loiterers and the dark back streets beyond Portland Road. I remember the sensations of that walk very vividly, strange as they were. I was still so far myself that I could notice my strange mental state, and wonder whether this stuff I had had was opium—a drug beyond my experience. It is hard now to describe the peculiarity of my mental strangeness—mental doubling vaguely expresses it. As I was walking up Regent Street I found in my mind a queer persuasion that it was Waterloo Station, and had an odd impulse to get into the Polytechnic as a man might get into a train. I put a knuckle in my eye, and it was Regent Street. How can I express it? You see a skilful actor looking quietly at you, he pulls a grimace, and lo!—another person. Is it too extravagant if I tell you that it seemed to me as if Regent Street had, for the moment, done that? Then, being persuaded it was Regent Street again, I was oddly muddled about some fantastic reminiscences that cropped up. "Thirty years ago," thought I, "it was here that I quarrelled with my brother." Then I burst out laughing, to the astonishment and encouragement of a group of night prowlers. Thirty years ago I did not exist, and never in my life had I boasted a brother. The stuff was surely liquid folly, for the poignant regret for that lost brother still clung to me. Along Portland Road the madness took another turn. I began to recall vanished shops, and to compare the street with what it used to be. Confused, troubled thinking was comprehensible enough after the drink I had taken, but what puzzled me were these curiously vivid phantasmal memories that had crept into my mind; and not only the memories that had crept in, but also the memories that had slipped out. I stopped opposite Stevens', the natural history dealer's, and cudgelled my brains to think what he had to do with me. A bus went by, and sounded exactly like the rumbling of a train. I seemed to be dipped into some dark, remote pit for the recollection. "Of course," said I, at last, "he has promised me three frogs to-morrow. Odd I should have forgotten."

Do they still show children dissolving views? In those I remember one view would begin like a faint ghost, and grow and out another. In just that way it seemed to me that a ghostly set of new sensations was struggling with those of my ordinary self.

I went on through Euston Road to Tottenham Court Road, puzzled, and a little frightened, and scarcely noticed the unusual way I was taking, for commonly I used to cut through the intervening network of back streets. I turned into University

Street, to discover that I had forgotten my number. Only by a strong effort did I recall 111A, and even then it seemed to me that it was a thing some forgotten person had told me. I tried to steady my mind by recalling the incidents of the dinner, and for the life of me I could conjure up no picture of my host's face; I saw him only as a shadowy outline, as one might see oneself reflected in a window through which one was looking. In his place, however, I had a curious exterior vision of myself sitting at a table, flushed, bright-eyed, and talkative.

"I must take this other powder," said I. "This is getting impossible."

I tried the wrong side of the hall for my candle and the matches, and had a doubt of which landing my room might be on. "I'm drunk," I said, "that's certain," and blundered needlessly on the staircase to sustain the proposition.

At the first glance my room seemed unfamiliar. "What rot!" I said, and stared about me. I seemed to bring myself back by the effort and the odd phantasmal quality passed into the concrete familiar. There was the old looking-glass, with my notes on the albumens stuck in the corner of the frame, my old everyday suit of clothes pitched about the floor. And yet it was not so real after all. I felt an idiotic persuasion trying to creep into my mind, as it were, that I was in a railway carriage in a train just stopping, that I was peering out of the window at some unknown station. I gripped the bed-rail firmly to reassure myself. "It's clairvoyance, perhaps," I said. "I must write to the Psychical Research Society."

I put the rouleau on my dressing-table, sat on my bed and began to take off my boots. It was as if the picture of my present sensations was painted over some other picture that was trying to show through. "Curse it!" said I; "my wits are going, or am I in two places at once?" Half undressed, I tossed the powder into a glass and drank it off. It effervesced, and became a fluorescent amber colour. Before I was in bed my mind was already tranquillised. I felt the pillow at my cheek, and thereupon I must have fallen asleep.

I awoke abruptly out of a dream of strange beasts, and found myself lying on my back. Probably every one knows that dismal emotional dream from which one escapes, awake indeed but strangely cowed. There was a curious taste in my mouth, a tired feeling in my limbs, a sense of cutaneous discomfort. I lay with my head motionless on my pillow, expecting that my feeling of strangeness and terror would probably pass away, and that I should then doze off again to sleep. But instead of that, my uncanny sensations increased. At first I could perceive nothing wrong about me. There was a faint light in the room, so faint that it was the very next thing to darkness, and the furniture stood out in it as vague blots of absolute darkness. I stared with my eyes just over the bedclothes.

It came into my mind that some one had entered the room to rob me of my rouleau of money, but after lying for some moments, breathing regularly to simulate sleep, I realised this was mere fancy. Nevertheless, the uneasy assurance of something wrong kept fast hold of me. With an effort I raised my head from the pillow, and peered about me at the dark. What it was I could not conceive. I looked at the dim shapes around me, the greater and lesser darknesses that indicated curtains, table, fireplace, bookshelves, and so forth. Then I began to perceive something unfamiliar in the forms of the darkness. Had the bed turned round? Yonder should be the bookshelves, and something shrouded and pallid rose there, something that would not answer to the bookshelves, however I looked at it. It was far too big to be my shirt thrown on a chair.

Overcoming a childish terror I threw back the bedclothes and thrust my leg out of bed. Instead of coming out of my truckle-bed upon the floor, I found my foot scarcely reached the edge of the mattress. I made another step, as it were, and sat up on the edge of the bed. By the side of my bed should be the candle, and the matches upon the broken chair. I put out my hand and touched—nothing. I waved my hand in the darkness, and it came against some heavy hanging, soft and thick in texture, which gave a rustling noise at my touch. I grasped this and pulled it; it appeared to be a curtain suspended over the head of my bed.

I was now thoroughly awake, and beginning to realise that I was in a strange room. I was puzzled. I tried to recall the overnight circumstances, and I found them now, curiously enough, vivid in my memory: the supper, my reception of the little packages, my wonder whether I was intoxicated, my slow undressing, the coolness to my flushed face of my pillow. I felt a sudden distrust. Was that last night, or the night before? At any rate, this room was strange to me, and I could not imagine how I had got into it. The dim, pallid outline was growing paler, and I perceived it was a window, with the dark shape of an oval toilet-glass against the weak intimation of the dawn that filtered through the blind. I stood up, and was surprised by a curious feeling of weakness and unsteadiness. With trembling hands outstretched, I walked slowly towards the window, getting, nevertheless, a bruise on the knee from a chair by the way. I fumbled round the glass, which was large, with handsome brass sconces, to find the blind-cord. I could not find any. By chance I took hold of the tassel, and with the click of a spring the blind ran up.

I found myself looking out upon a scene that was altogether strange to me. The night was overcast, and through the flocculent grey of the heaped clouds there filtered a faint half-light of dawn. Just at the edge of the sky, the cloud-canopy had a blood-red rim. Below, everything was dark and in-

distinct, dim hills in the distance, a vague mass of buildings running up into pinnacles, trees like spilt ink, and below the window a tracery of black bushes and pale grey paths. It was so unfamiliar that for the moment I thought myself still dreaming. I felt the toilet-table; it appeared to be made of some polished wood, and was rather elaborately furnished—there were little cut-glass bottles and a brush upon it. There was also a queer little object, horse-shoe-shaped it felt, with smooth, hard projections, lying in a saucer. I could find no matches nor candlestick.

I turned my eyes to the room again. Now the blind was up, faint spectres of its furnishing came out of the darkness. There was a huge curtained bed, and the fireplace at its foot had a large white mantel with something of the shimmer of marble.

I leant against the toilet-table, shut my eyes and opened them again, and tried to think. The whole thing was far too real for dreaming. I was inclined to imagine there was still some hiatus in my memory as a consequence of my draught of that strange liqueur; that I had come into my inheritance perhaps, and suddenly lost my recollection of everything since my good fortune had been announced. Perhaps if I waited a little, things would be clearer to me again. Yet my dinner with old Elvesham was now singularly vivid and recent. The champagne, the observant waiters, the powder, and the liqueurs—I could have staked my soul it all happened a few hours ago.

And then occurred a thing so trivial and yet so terrible to me that I shiver now to think of that moment. I spoke aloud. I said, "How the devil did I get here?" . . . *And the voice was not my own.*

It was not my own, it was thin, the articulation was slurred, the resonance of my facial bones was different. Then to reassure myself I ran one hand over the other, and felt loose folds of skin, the bony laxity of age. "Surely," I said in that horrible voice that had somehow established itself in my throat, "surely this thing is a dream!" Almost as quickly as if I did it involuntarily, I thrust my fingers into my mouth. My teeth had gone. My finger-tips ran on the flaccid surface of an even row of shrivelled gums. I was sick with dismay and disgust.

I felt then a passionate desire to see myself, to realise at once in its full horror the ghastly change that had come upon me. I tottered to the mantel, and felt along it for matches. As I did so, a barking cough sprang up in my throat, and I clutched the thick flannel nightdress I found about me. There were no matches there, and I suddenly realised that my extremities were cold. Sniffing and coughing, whimpering a little perhaps, I fumbled back to bed. "It is surely a dream," I whispered to myself as I clambered back, "surely a dream." It was a senile repetition. I pulled the bedclothes over my shoulders, over my ears, I thrust my withered hand under the

pillow, and determined to compose myself to sleep. Of course it was a dream. In the morning the dream would be over, and I should wake up strong and vigorous again to my youth and studies. I shut my eyes, breathed regularly, and, finding myself wakeful, began to count slowly through the powers of three.

But the thing I desired would not come. I could not get to sleep. And the persuasion of the inexorable reality of the change that had happened to me grew steadily. Presently I found myself with my eyes wide open, the powers of three forgotten, and my skinny fingers upon my shrivelled gums. I was indeed, suddenly and abruptly, an old man. I had in some unaccountable manner fallen through my life and come to old age, in some way I had been cheated of all the best of my life, of love, of struggle, of strength and hope. I grovelled into the pillow and tried to persuade myself that such hallucination was possible. Imperceptibly, steadily, the dawn grew clearer.

At last, despairing of further sleep, I sat up in bed and looked about me. A chill twilight rendered the whole chamber visible. It was spacious and well-furnished, better furnished than any room I had ever slept in before. A candle and matches became dimly visible upon a little pedestal in a recess. I threw back the bedclothes, and shivering with the rawness of the early morning, albeit it was summer-time, I got out and lit the candle. Then, trembling horribly so that the extinguisher rattled on its spike, I tottered to the glass and saw—*Elvesham's face*! It was none the less horrible because I had already dimly feared as much. He had already seemed physically weak and pitiful to me, but seen now, dressed only in a coarse flannel nightdress that fell apart and showed the stringy neck, seen now as my own body, I cannot describe its desolate decrepitude. The hollow cheeks, the straggling tail of dirty grey hair, the rheumy bleared eyes, the quivering, shrivelled lips, the lower displaying a gleam of the pink interior lining, and those horrible dark gums showing. You who are mind and body together at your natural years, cannot imagine what this fiendish imprisonment meant to me. To be young and full of the desire and energy of youth, and to be caught, and presently to be crushed in this tottering ruin of a body. . . .

But I wander from the course of my story. For some time I must have been stunned at this change that had come upon me. It was daylight when I did so far gather myself together as to think. In some inexplicable way I had been changed, though how, short of magic, the thing had been done, I could not say. And as I thought, the diabolical ingenuity of Elvesham came home to me. It seemed plain to me that as I found myself in his, so he must be in possession of *my* body, of my strength that is, and my future. But how to prove it? Then as I thought, the thing became so incredible even to me, that my mind reeled, and I had to pinch myself, to feel my

toothless gums, to see myself in the glass, and touch the things about me before I could steady myself to face the facts again. Was all life hallucination? Was I indeed Elvesham, and he me? Had I been dreaming of Eden overnight? Was there any Eden? But if I was Elvesham, I should remember where I was on the previous morning, the name of the town in which I lived, what happened before the dream began. I struggled with my thoughts. I recalled the queer doubleness of my memories overnight. But now my mind was clear. Not the ghost of any memories but those proper to Eden could I raise.

"This way lies insanity!" I cried in my piping voice. I staggered to my feet, dragged my feeble, heavy limbs to the washhand-stand, and plunged my grey head into a basin of cold water. Then, towelling myself, I tried again. It was no good. I felt beyond all question that I was indeed Eden, not Elvesham. But Eden in Elvesham's body!

Had I been a man of any other age, I might have given myself up to my fate as one enchanted. But in these sceptical days miracles do not pass current. Here was some trick of psychology. What a drug and a steady stare could do, a drug and a steady stare, or some similar treatment, could surely undo. Men have lost their memories before. But to exchange memories as one does umbrellas! I laughed. Alas! not a healthy laugh, but a wheezing, senile titter. I could have fancied old Elvesham laughing at my plight, and a gust of petulant anger, unusual to me, swept across my feelings. I began dressing eagerly in the clothes I found lying about on the floor, and only realised when I was dressed that it was an evening suit I had assumed. I opened the wardrobe and found some ordinary clothes, a pair of plaid trousers, and an old-fashioned dressing-gown. I put a venerable smoking-cap on my venerable head, and, coughing a little from my exertions, tottered out upon the landing.

It was then perhaps a quarter to six, and the blinds were closely drawn and the house quite silent. The landing was a spacious one, a broad, richly-carpeted staircase went down into the darkness of the hall below, and before me a door ajar showed me a writing-desk, a revolving bookcase, the back of a study chair, and a fine array of bound books, shelf upon shelf.

"My study," I mumbled, and walked across the landing. Then at the sound of my voice a thought struck me, and I went back to the bedroom and put in the set of false teeth. They slipped in with the ease of old habit. "That's better," said I, gnashing them, and so returned to the study.

The drawers of the writing-desk were locked. Its revolving top was also locked. I could see no indications of the keys, and there were none in the pockets of my trousers. I shuffled back at once to the bedroom, and went through the dress-suit, and afterwards the pockets of all the garments I could find. I was very eager; and one might have imagined that burglars

had been at work, to see my room when I had done. Not only were there no keys to be found, but not a coin, nor a scrap of paper—save only the receipted bill of the overnight dinner.

A curious weariness asserted itself. I sat down and stared at the garments flung here and there, their pockets turned inside out. My first frenzy had already flickered out. Every moment I was beginning to realise the immense intelligence of the plans of my enemy, to see more and more clearly the hopelessness of my position. With an effort I rose and hurried into the study again. On the staircase was a housemaid pulling up the blinds. She stared, I think, at the expression of my face. I shut the door of the study behind me, and, seizing a poker, began an attack upon the desk. That is how they found me. The cover of the desk was split, the lock smashed, the letters torn out of the pigeon-holes and tossed about the room. In my senile rage I had flung about the pens and other such light stationery, and overturned the ink. Moreover, a large vase upon the mantel had got broken—I do not know how. I could find no cheque-book, no money, no indications of the slightest use for the recovery of my body. I was battering madly at the drawers, when the butler, backed by two women-servants, intruded upon me.

That simply is the story of my change. No one will believe my frantic assertions. I am treated as one demented, and even at this moment I am under restraint. But I am sane, absolutely sane, and to prove it I have sat down to write this story minutely as the thing happened to me. I appeal to the reader, whether there is any trace of insanity in the style or method of the story he has been reading. I am a young man locked away in an old man's body. But the clear fact is incredible to every one. Naturally I appear demented to those who will not believe this, naturally I do not know the names of my secretaries, of the doctors who come to see me, of my servants and neighbours, of this town (wherever it is) where I find myself. Naturally I lose myself in my own house, and suffer inconveniences of every sort. Naturally I ask the oddest questions. Naturally I weep and cry out, and have paroxysms of despair. I have no money and no cheque-book. The bank will not recognise my signature, for I suppose that, allowing for the feeble muscles I now have, my handwriting is still Eden's. These people about me will not let me go to the bank personally. It seems, indeed, that there is no bank in this town, and that I have taken an account in some part of London. It seems that Elvesham kept the name of his solicitor secret from all his household—I can ascertain nothing. Elvesham was, of course, a profound student of mental science, and all my declarations of the facts of the case merely confirm the theory that my insanity is the outcome of overmuch brooding upon psychology. Dreams of the personal identity indeed!

Two days ago I was a healthy youngster, with all life before me ; now I am a furious old man, unkempt and desperate and miserable, prowling about a great luxurious strange house, watched, feared, and avoided as a lunatic by every one about me. And in London is Elvesham beginning life again in a vigorous body, and with all the accumulated knowledge and wisdom of threescore and ten. He has stolen my life.

What has happened I do not clearly know. In the study are volumes of manuscript notes referring chiefly to the psychology of memory, and parts of what may be either calculations or ciphers in symbols absolutely strange to me. In some passages there are indications that he was also occupied with the philosophy of mathematics. I take it he has transferred the whole of his memories, the accumulation that makes up his personality, from this old withered brain of his to mine, and, similarly, that he has transferred mine to his discarded tenement. Practically, that is, he has changed bodies. But how such a change may be possible is without the range of my philosophy. I have been a materialist for all my thinking life, but here, suddenly, is a clear case of man's detachability from matter.

One desperate experiment I am about to try. I sit writing here before putting the matter to issue. This morning, with the help of a table-knife that I had secreted at breakfast, I succeeded in breaking open a fairly obvious secret drawer in this wrecked writing-desk. I discovered nothing save a little green glass phial containing a white powder. Round the neck of the phial was a label, and thereon was written this one word, "*Release.*" This may be—is most probably, poison. I can understand Elvesham placing poison in my way, and I should be sure that it was his intention so to get rid of the only living witness against him, were it not for this careful concealment. The man has practically solved the problem of immortality. Save for the spite of chance, he will live in my body until it has aged, and then, again, throwing that aside, he will assume some other victim's youth and strength. When one remembers his heartlessness, it is terrible to think of the ever-growing experience, that . . . How long has he been leaping from body to body ? . . . But I tire of writing. The powder appears to be soluble in water. The taste is not unpleasant.

There the narrative found upon Mr. Elvesham's desk ends. His dead body lay between the desk and the chair. The latter had been pushed back, probably by his last convulsions. The story was written in pencil, and in a crazy hand quite unlike his usual minute characters. There remain only two curious facts to record. Indisputably there was some connection between Eden and Elvesham, since the whole of Elvesham's property was bequeathed to the young man. But he never inherited. When Elvesham committed suicide, Eden was, strangely enough, already dead. Twenty-four hours before,

he had been knocked down by a cab and killed instantly, at the crowded crossing at the intersection of Gower Street and Euston Road. So that the only human being who could have thrown light upon this fantastic narrative is beyond the reach of questions.

STORY TWENTY-ONE

IN THE ABYSS

THE lieutenant stood in front of the steel sphere and gnawed a piece of pine splinter. "What do you think of it, Steevens?" he asked.

"It's an idea," said Steevens, in the tone of one who keeps an open mind.

"I believe it will smash—flat," said the lieutenant.

"He seems to have calculated it all out pretty well," said Steevens, still impartial.

"But think of the pressure," said the lieutenant. "At the surface of the water it's fourteen pounds to the inch, thirty feet down it's double that; sixty, treble; ninety, four times; nine hundred, forty times; five thousand, three hundred—that's a mile—it's two hundred and forty times fourteen pounds, that's—let's see—thirty hundredweight—a ton and a half, Steevens; *a ton and a half* to the square inch. And the ocean where he's going is five miles deep. That's seven and a half—"

"Sounds a lot," said Steevens, "but it's jolly thick steel."

The lieutenant made no answer, but resumed his pine splinter. The object of their conversation was a huge ball of steel, having an exterior diameter of perhaps nine feet. It looked like the shot for some titanic piece of artillery. It was elaborately nested in a monstrous scaffolding built into the framework of the vessel, and the gigantic spars that were presently to sling it overboard gave the stern of the ship an appearance that had raised the curiosity of every decent sailor who had sighted it, from the Pool of London to the Tropic of Capricorn. In two places, one above the other, the steel gave place to a couple of circular windows of enormously thick glass, and one of these, set in a steel frame of great solidity, was now partially unscrewed. Both the men had seen the interior of this globe for the first time that morning. It was elaborately padded with air cushions, with little studs sunk between bulging pillows to work the simple mechanism of the affair. Everything was elaborately padded, even the Myers apparatus which was to absorb carbonic acid and replace the oxygen inspired by its tenant, when he had crept in by the glass manhole, and had been screwed in. It was so elaborately padded that a man might have been fired from a gun in it with perfect safety. And it had need to be, for presently a man was to crawl in through that glass manhole, to be screwed up tightly, and to be flung overboard, and to sink down—down—down, for five miles, even as the lieutenant said. It had taken the strongest hold of his imagination; it made him a bore at mess;

and he found Steevens, the new arrival aboard, a godsend to talk to about it, over and over again.

"It's my opinion," said the lieutenant, "that that glass will simply bend in and bulge and smash, under a pressure of that sort. Daubrée has made rocks run like water under big pressures—and, you mark my words——"

"If the glass did break in," said Steevens, "what then?"

"The water would shoot in like a jet of iron. Have you ever felt a straight jet of high pressure water? It would hit as hard as a bullet. It would simply smash him and flatten him. It would tear down his throat, and into his lungs; it would blow in his ears——"

"What a detailed imagination you have!" protested Steevens, who saw things vividly.

"It's a simple statement of the inevitable," said the lieutenant.

"And the globe?"

"Would just give out a few little bubbles, and it would settle down comfortably against the Day of Judgment, among the oozes and the bottom clay—with poor Elstead spread over his own smashed cushions like butter over bread."

He repeated this sentence as though he liked it very much.

"Like butter over bread," he said.

"Having a look at the jigger?" said a voice, and Elstead stood behind them, spick and span in white, with a cigarette between his teeth, and his eyes smiling out of the shadow of his ample hat-brim. "What's that about bread and butter, Weybridge? Grumbling as usual about the insufficient pay of naval officers? It won't be more than a day now before I start. We are to get the slings ready to-day. This clean sky and gentle swell is just the kind of thing for swinging off a dozen tons of lead and iron, isn't it?"

"It won't affect you much," said Weybridge.

"No. Seventy or eighty feet down, and I shall be there in a dozen seconds, there's not a particle moving, though the wind shriek itself hoarse up above, and the water lifts halfway to the clouds. No. Down there——" He moved to the side of the ship and the other two followed him. All three leant forward on their elbows and stared down into the yellow-green water.

"Peace," said Elstead, finishing his thought aloud.

"Are you dead certain that clockwork will act?" asked Weybridge presently.

"It has worked thirty-five times," said Elstead. "It's bound to work."

"But if it doesn't?"

"Why shouldn't it?"

"I wouldn't go down in that confounded thing," said Weybridge, "for twenty thousand pounds."

"Cheerful chap you are," said Elstead, and spat sociably at a bubble below.

"I don't understand yet how you mean to work the thing," said Steevens.

"In the first place, I'm screwed into the sphere," said Elstead, "and when I've turned the electric light off and on three times to show I'm cheerful, I'm swung out over the stern by that crane, with all those big lead sinkers slung below me. The top lead weight has a roller carrying a hundred fathoms of strong cord rolled up, and that's all that joins the sinkers to the sphere, except the slings that will be cut when the affair is dropped. We use cord rather than wire rope because it's easier to cut and more buoyant—necessary points, as you will see.

"Through each of these lead weights you notice there is a hole, and an iron rod will be run through that and will project six feet on the lower side. If that rod is rammed up from below, it knocks up a lever and sets the clockwork in motion at the side of the cylinder on which the cord winds.

"Very well. The whole affair is lowered gently into the water, and the slings are cut. The sphere floats—with the air in it, it's lighter than water—but the lead weights go down straight and the cord runs out. When the cord is all paid out, the sphere will go down too, pulled down by the cord."

"But why the cord?" asked Steevens. "Why not fasten the weights directly to the sphere?"

"Because of the smash down below. The whole affair will go rushing down, mile after mile, at a headlong pace at last. It would be knocked to pieces on the bottom if it wasn't for that cord. But the weights will hit the bottom, and directly they do, the buoyancy of the sphere will come into play. It will go on sinking slower and slower; come to a stop at last, and then begin to float upward again.

"That's where the clockwork comes in. Directly the weights smash against the sea bottom, the rod will be knocked through and will kick up the clockwork, and the cord will be rewound on the reel. I shall be lugged down to the sea bottom. There I shall stay for half an hour, with the electric light on, looking about me. Then the clockwork will release a spring knife, the cord will be cut, and up I shall rush again, like a soda-water bubble. The cord itself will help the flotation."

"And if you should chance to hit a ship?" said Weybridge.

"I should come up at such a pace, I should go clean through it," said Elstead, "like a cannon ball. You needn't worry about that."

"And suppose some nimble crustacean should wriggle into your clockwork——"

"It would be a pressing sort of invitation for me to stop," said Elstead, turning his back on the water and staring at the sphere.

They had swung Elstead overboard by eleven o'clock. The

day was serenely bright and calm, with the horizon lost in haze. The electric glare in the little upper compartment beamed cheerfully three times. Then they let him down slowly to the surface of the water, and a sailor in the stern chains hung ready to cut the tackle that held the lead weights and the sphere together. The globe, which had looked so large on deck, looked the smallest thing conceivable under the stern of the ship. It rolled a little, and its two dark windows, which floated uppermost, seemed like eyes turned up in round wonderment at the people who crowded the rail. A voice wondered how Elstead liked the rolling. "Are you ready?" sang out the commander. "Ay, ay, sir!" "Then let her go!"

The rope of the tackle tightened against the blade and was cut, and an eddy rolled over the globe in a grotesquely helpless fashion. Some one waved a handkerchief, some one else tried an ineffectual cheer, a midddy was counting slowly, "Eight, nine, ten!" Another roll, then with a jerk and a splash the thing righted itself.

It seemed to be stationary for a moment, to grow rapidly smaller, and then the water closed over it, and it became visible, enlarged by refraction and dimmer, below the surface. Before one could count three it had disappeared. There was a flicker of white light far down in the water, that diminished to a speck and vanished. Then there was nothing but a depth of water going down into blackness, through which a shark was swimming.

Then suddenly the screw of the cruiser began to rotate, the water was crickled, the shark disappeared in a wrinkled confusion, and a torrent of foam rushed across the crystalline clearness that had swallowed up Elstead. "What's the idee?" said one A.B. to another.

"We're going to lay off about a couple of miles, 'fear he should hit us when he comes up," said his mate.

The ship steamed slowly to her new position. Aboard her almost every one who was unoccupied remained watching the breathing swell into which the sphere had sunk. For the next half-hour it is doubtful if a word was spoken that did not bear directly or indirectly on Elstead. The December sun was now high in the sky, and the heat very considerable.

"He'll be cold enough down there," said Weybridge. "They say that below a certain depth sea water's always just about freezing."

"Where'll he come up?" asked Steevens. "I've lost my bearings."

"That's the spot," said the commander, who prided himself on his omniscience. He extended a precise finger south-eastward. "And this, I reckon, is pretty nearly the moment," he said. "He's been thirty-five minutes."

"How long does it take to reach the botton of the ocean?" asked Steevens.

"For a depth of five miles, and reckoning—as we did—an acceleration of two feet per second, both ways, is just about three-quarters of a minute."

"Then he's overdue," said Weybridge.

"Pretty nearly," said the commander. "I suppose it takes a few minutes for that cord of his to wind in."

"I forgot that," said Weybridge, evidently relieved.

And then began the suspense. A minute slowly dragged itself out, and no sphere shot out of the water. Another followed, and nothing broke the low oily swell. The sailors explained to one another that little point about the winding-in of the cord. The rigging was dotted with expectant faces. "Come up, Elstead!" called one hairy-chested salt impatiently, and the others caught it up, and shouted as though they were waiting for the curtain of a theatre to rise.

The commander glanced irritably at them.

"Of course, if the acceleration's less than two," he said, "he'll be all the longer. We aren't absolutely certain that was the proper figure. I'm no slavish believer in calculations."

Steevens agreed concisely. No one on the quarter-deck spoke for a couple of minutes. Then Steevens' watchcase clicked.

When, twenty-one minutes after, the sun reached the zenith, they were still waiting for the globe to reappear, and not a man aboard had dared to whisper that hope was dead. It was Weybridge who first gave expression to that realisation. He spoke while the sound of eight bells still hung in the air. "I always distrusted that window," he said quite suddenly to Steevens.

"Good God!" said Steevens, "you don't think——?"

"Well!" said Weybridge, and left the rest to his imagination.

"I'm no great believer in calculations myself," said the commander dubiously, "so that I'm not altogether hopeless yet." And at midnight the gunboat was steaming slowly in a spiral round the spot where the globe had sunk, and the white beam of the electric light fled and halted and swept discontentedly onward again over the waste of phosphorescent waters under the little stars.

"If his window hasn't burst and smashed him," said Weybridge, "then it's a cursed sight worse, for his clockwork has gone wrong, and he's alive now, five miles under our feet, down there in the cold and dark, anchored in that little bubble of his, where never a ray of light has shone or a human being lived, since the waters were gathered together. He's there without food, feeling hungry and thirsty and scared, wondering whether he'll starve or stifle. Which will it be? The Myers apparatus is running out, I suppose. How long do they last?"

"Good heaven!" he exclaimed; "what little things we are! What daring little devils! Down there, miles and

miles of water—all water, and all this empty water about us and this sky. Gulfs!" He threw his hands out, and as he did so, a little white streak swept noiselessly up the sky, travelled more slowly, stopped, became a motionless dot, as though a new star had fallen up into the sky. Then it went sliding back again and lost itself amidst the reflections of the stars and the white haze of the sea's phosphorescence.

At the sight he stopped, arm extended and mouth open. He shut his mouth, opened it again, and waved his arms with an impatient gesture. Then he turned, shouted "El-stead ahoy!" to the first watch, and went at a run to Lindley and the search-light. "I saw him," he said. "Starboard there! His lights on, and he's just shot out of the water. Bring the light round. We ought to see him drifting, when he lifts on the swell."

But they never picked up the explorer until dawn. Then they almost ran him down. The crane was swung out and a boat's crew hooked the chain to the sphere. When they had shipped the sphere, they unscrewed the manhole and peered into the darkness of the interior (for the electric light chamber was intended to illuminate the water about the sphere, and was shut off entirely from its general cavity).

The air was very hot within the cavity, and the indiarubber at the lip of the manhole was soft. There was no answer to their eager questions and no sound of movement within. Elstead seemed to be lying motionless, crumpled up in the bottom of the globe. The ship's doctor crawled in and lifted him out to the men outside. For a moment or so they did not know whether Elstead was alive or dead. His face, in the yellow light of the ship's lamps, glistened with perspiration. They carried him down to his own cabin.

He was not dead, they found, but in a state of absolute nervous collapse, and besides cruelly bruised. For some days he had to lie perfectly still. It was a week before he could tell his experiences.

Almost his first words were that he was going down again. The sphere would have to be altered, he said, in order to allow him to throw off the cord if need be, and that was all. He had had the most marvellous experience. "You thought I should find nothing but ooze," he said. "You laughed at my explorations, and I've discovered a new world!" He told his story in disconnected fragments, and chiefly from the wrong end, so that it is impossible to re-tell it in his words. But what follows is the narrative of his experience.

It began atrociously, he said. Before the cord ran out, the thing kept rolling over. He felt like a frog in a football. He could see nothing but the crane and the sky overhead, with an occasional glimpse of the people on the ship's rail. He couldn't tell a bit which way the thing would roll next. Suddenly he would find his feet going up, and try to step, and

over he went rolling, head over heels, and just anyhow, on the padding. Any other shape would have been more comfortable, but no other shape was to be relied upon under the huge pressure of the nethermost abyss.

Suddenly the swaying ceased; the globe righted, and when he had picked himself up, he saw the water all about him greeny-blue, with an attenuated light filtering down from above, and a shoal of little floating things went rushing up past him, as it seemed to him, towards the light. And even as he looked, it grew darker and darker, until the water above was as dark as the midnight sky, albeit of a greener shade, and the water below black. And little transparent things in the water developed a faint glint of luminosity, and shot past him in faint greenish streaks.

And the feeling of falling! It was just like the start of a lift, he said, only it kept on. One has to imagine what that means, that keeping on. It was then of all times that Elstead repented of his adventure. He saw the chances against him in an altogether new light. He thought of the big cuttle-fish people knew to exist in the middle waters, the kind of things they find half digested in whales at times, or floating dead and rotten and half eaten by fish. Suppose one caught hold and wouldn't let go. And had the clockwork really been sufficiently tested? But whether he wanted to go on or to go back mattered not the slightest now.

In fifty seconds everything was as black as night outside, except where the beam from his light struck through the waters, and picked out every now and then some fish or scrap of sinking matter. They flashed by too fast for him to see what they were. Once he thinks he passed a shark. And then the sphere began to get hot by friction against the water. They had underestimated this, it seems.

The first thing he noticed was that he was perspiring, and then he heard a hissing growing louder under his feet, and saw a lot of little bubbles—very little bubbles they were—rushing upward like a fan through the water outside. Steam! He felt the window, and it was hot. He turned on the minute glow-lamp that lit his own cavity, looked at the padded watch by the studs, and saw he had been travelling now for two minutes. It came into his head that the window would crack through the conflict of temperatures, for he knew the bottom water is very near freezing.

Then suddenly the floor of the sphere seemed to press against his feet, the rush of bubbles outside grew slower and slower, and the hissing diminished. The sphere rolled a little. The window had not cracked, nothing had given, and he knew that the dangers of sinking, at any rate, were over.

In another minute or so he would be on the floor of the abyss. He thought, he said, of Steevens and Weybridge and the rest of them five miles overhead, higher to him than the very highest

clouds that ever floated over land are to us, steaming slowly and staring down and wondering what had happened to him.

He peered out of the window. There were no more bubbles now, and the hissing had stopped. Outside there was a heavy blackness—as black as black velvet—except where the electric light pierced the empty water and showed the colour of it—a yellow-green. Then three things like shapes of fire swam into sight, following each other through the water. Whether they were little and near or big and far off he could not tell.

Each was outlined in a bluish light almost as bright as the lights of a fishing-smack, a light which seemed to be smoking greatly, and all along the sides of them were specks of this, like the lighter portholes of a ship. Their phosphorescence seemed to go out as they came into the radiance of his lamp, and he saw then that they were little fish of some strange sort, with huge heads, vast eyes, and dwindling bodies and tails. Their eyes were turned towards him, and he judged they were following him down. He supposed they were attracted by his glare.

Presently others of the same sort joined them. As he went on down, he noticed that the water became of a pallid colour, and that little specks twinkled in his ray like motes in a sun-beam. This was probably due to the clouds of ooze and mud that the impact of his leaden sinkers had disturbed.

By the time he was drawn down to the lead weights he was in a dense fog of white that his electric light failed altogether to pierce for more than a few yards, and many minutes elapsed before the hanging sheets of sediment subsided to any extent. Then, lit by his light and by the transient phosphorescence of a distant shoal of fishes, he was able to see under the huge blackness of the super-incumbent water an undulating expanse of greyish-white ooze, broken here and there by tangled thickets of a growth of sea lilies, waving hungry tentacles in the air.

Farther away were the graceful, translucent outlines of a group of gigantic sponges. About this floor there were scattered a number of bristling flattish tufts of rich purple and black, which he decided must be some sort of sea-urchin, and small, large-eyed or blind things having a curious resemblance, some to woodlice and others to lobsters, crawled sluggishly across the track of the light and vanished into the obscurity again, leaving furrowed trails behind them.

Then suddenly the hovering swarm of little fishes veered about and came towards him as a flight of starlings might do. They passed over him like a phosphorescent snow, and then he saw behind them some larger creature advancing towards the sphere.

At first he could see it only dimly, a faintly moving figure remotely suggestive of a walking man, and then it came into the spray of light that the lamp shot out. As the glare struck it, it shut its eyes, dazzled. He stared in rigid astonishment.

It was a strange vertebrated animal. Its dark purple head

was dimly suggestive of a chameleon, but it had such a high forehead and such a braincase as no reptile ever displayed before ; the vertical pitch of its face gave it a most extraordinary resemblance to a human being.

Two large and protruding eyes projected from sockets in chameleon fashion, and it had a broad reptilian mouth with horny lips beneath its little nostrils. In the position of the ears were two huge gill-covers, and out of these floated a branching tree of coralline filaments, almost like the tree-like gills that very young rays and sharks possess.

But the humanity of the face was not the most extraordinary thing about the creature. It was a biped ; its almost globular body was poised on a tripod of two frog-like legs and a long thick tail, and its fore limbs, which grotesquely caricatured the human hand, much as a frog's do, carried a long shaft of bone, tipped with copper. The colour of the creature was variegated ; its head, hands, and legs were purple ; but its skin, which hung loosely upon it, even as clothes might do, was a phosphorescent grey. And it stood there blinded by the light.

At last this unknown creature of the abyss blinked its eyes open, and, shading them with its disengaged hand, opened its mouth and gave vent to a shouting noise, articulate almost as speech might be, that penetrated even the steel case and padded jacket of the sphere. How a shouting may be accomplished without lungs Elstead does not profess to explain. It then moved sideways out of the glare into the mystery of shadow that bordered it on either side, and Elstead felt rather than saw that it was coming towards him. Fancying the light had attracted it, he turned the switch that cut off the current. In another moment something soft dabbed upon the steel, and the globe swayed.

Then the shouting was repeated, and it seemed to him that a distant echo answered it. The dabbing recurred, and the globe swayed and ground against the spindle over which the wire was rolled. He stood in the blackness and peered out into the everlasting night of the abyss. And presently he saw, very faint and remote, other phosphorescent quasi-human forms hurrying towards him.

Hardly knowing what he did, he felt about in his swaying prison for the stud of the exterior electric light, and came by accident against his own small glow-lamp in its padded recess. The sphere twisted, and then threw him down ; he heard shouts like shouts of surprise, and when he rose to his feet, he saw two pairs of stalked eyes peering into the lower window and reflecting his light.

In another moment hands were dabbing vigorously at his steel casing, and there was a sound, horrible enough in his position, of the metal protection of the clockwork being vigorously hammered. That, indeed, sent his heart into his mouth, for if these strange creatures succeeded in stopping that, his

release would never occur. Scarcely had he thought as much when he felt the sphere sway violently, and the floor of it press hard against his feet. He turned off the small glow-lamp that lit the interior, and sent the ray of the large light in the separate compartment out into the water. The sea-floor and the man-like creatures had disappeared, and a couple of fish chasing each other dropped suddenly by the window.

He thought at once that these strange denizens of the deep sea had broken the rope, and that he had escaped. He drove up faster and faster, and then stopped with a jerk that sent him flying against the padded roof of his prison. For half a minute, perhaps, he was too astonished to think.

Then he felt that the sphere was spinning slowly, and rocking, and it seemed to him that it was also being drawn through the water. By crouching close to the window, he managed to make his weight effective and roll that part of the sphere downward, but he could see nothing save the pale ray of his light striking down ineffectively into the darkness. It occurred to him that he would see more if he turned the lamp off, and allowed his eyes to grow accustomed to the profound obscurity.

In this he was wise. After some minutes the velvety blackness became a translucent blackness, and then, far away, and as faint as the zodiacal light of an English summer evening, he saw shapes moving below. He judged these creatures had detached his cable, and were towing him along the sea bottom.

And then he saw something faint and remote across the undulations of the submarine plain, a broad horizon of pale luminosity that extended this way and that way as far as the range of his little window permitted him to see. To this he was being towed, as a balloon might be towed by men out of the open country into a town. He approached it very slowly, and very slowly the dim irradiation was gathered together into more definite shapes.

It was nearly five o'clock before he came over this luminous area, and by that time he could make out an arrangement suggestive of streets and houses grouped about a vast roofless erection that was grotesquely suggestive of a ruined abbey. It was spread out like a map below him. The houses were all roofless enclosures of walls, and their substance being, as he afterwards saw, of phosphorescent bones, gave the place an appearance as if it were built of drowned moonshine.

Among the inner caves of the place waving trees of crinoid stretched their tentacles, and tall, slender, glassy sponges shot like shining minarets and lilies of filmy light out of the general glow of the city. In the open spaces of the place he could see a stirring movement as of crowds of people, but he was too many fathoms above them to distinguish the individuals in those crowds.

Then slowly they pulled him down, and as they did so, the details of the place crept slowly upon his apprehension. He

saw that the courses of the cloudy buildings were marked out with beaded lines of round objects, and then he perceived that at several points below him, in broad open spaces, were forms like the encrusted shapes of slugs.

Slowly and surely he was drawn down, and the forms below him became brighter, clearer, more distinct. He was being pulled down, he perceived, towards the large building in the centre of the town, and he could catch a glimpse ever and again of the multitudinous forms that were lugging at his cord. He was astonished to see that the rigging of one of the ships, which formed such a prominent feature of the place, was crowded with a host of gesticulating figures regarding him, and then the walls of the great building rose about him silently, and hid the city from his eyes.

And such walls they were, of water-logged wood, and twisted wire-rope, and iron spars, and copper, and the bones and skulls of dead men. The skulls ran in zigzag lines and spirals and fantastic curves over the building; and in and out of their eye-sockets, and over the whole surface of the place, lurked and played a multitude of silvery little fishes.

Suddenly his ears were filled with a low shouting and a noise like the violent blowing of horns, and this gave place to a fantastic chant. Down the sphere sank, past the huge pointed windows, through which he saw vaguely a great number of these strange, ghostlike people regarding him, and at last he came to rest, as it seemed, on a kind of altar that stood in the centre of the place.

And now he was at such a level that he could see these strange people of the abyss plainly once more. To his astonishment, he perceived that they were prostrating themselves before him, all save one, dressed as it seemed in a robe of placoid scales, and crowned with a luminous diadem, who stood with his reptilian mouth opening and shutting, as though he led the chanting of the worshippers.

A curious impulse made Elstead turn on his small glow-lamp again, so that he became visible to these creatures of the abyss, albeit the glare made them disappear forthwith into night. At this sudden sight of him, the chanting gave place to a tumult of exultant shouts; and Elstead, being anxious to watch them, turned his light off again, and vanished from before their eyes. But for a time he was too blind to make out what they were doing, and when at last he could distinguish them, they were kneeling again. And thus they continued worshipping him, without rest or intermission, for a space of three hours.

Most circumstantial was Elstead's account of this astounding city and its people, these people of perpetual night, who have never seen sun or moon or stars, green vegetation, nor any living, air-breathing creatures, who know nothing of fire, nor any light but the phosphorescent light of living things.

Startling as is his story, it is yet more startling to find that

scientific men, of such eminence as Adams and Jenkins, find nothing incredible in it. They tell me they see no reason why intelligent, water-breathing, vertebrated creatures, inured to a low temperature and enormous pressure, and of such a heavy structure that neither alive nor dead would they float, might not live upon the bottom of the deep sea, and quite unsuspected by us, descendants like ourselves of the great Theriomorpha of the New Red Sandstone age.

We should be known to them, however, as strange, meteoric creatures, wont to fall catastrophically dead out of the mysterious blackness of their watery sky. And not only we ourselves, but our ships, our metals, our appliances, would come raining down out of the night. Sometimes sinking things would smite down and crush them, as if it were the judgment of some unseen power above, and sometimes would come things of the utmost rarity or utility, or shapes of inspiring suggestion. One can understand, perhaps, something of their behaviour at the descent of a living man, if one thinks what a barbaric people might do, to whom an enhaloed, shining creature came suddenly out of the sky.

At one time or another Elstead probably told the officers of the *Ptarmigan* every detail of his strange twelve hours in the abyss. That he also intended to write them down is certain, but he never did, and so unhappily we have to piece together the discrepant fragments of his story from the reminiscences of Commander Simmons, Weybridge, Steevens, Lindley, and the others.

We see the thing darkly in fragmentary glimpses—the huge ghostly building, the bowing, chanting people, with their dark chameleon-like heads and faintly luminous clothing, and Elstead, with his light turned on again, vainly trying to convey to their minds that the cord by which the sphere was held was to be severed. Minute after minute slipped away, and Elstead, looking at his watch, was horrified to find that he had oxygen only for four hours more. But the chant in his honour kept on as remorselessly as if it was the marching song of his approaching death.

The manner of his release he does not understand, but to judge by the end of cord that hung from the sphere, it had been cut through by rubbing against the edge of the altar. Abruptly the sphere rolled over, and he swept up, out of their world, as an ethereal creature clothed in a vacuum would sweep through our own atmosphere back to its native ether again. He must have torn out of their sight as a hydrogen bubble hastens upward from our air. A strange ascension it must have seemed to them.

The sphere rushed up with even greater velocity than, when weighted with the lead sinkers, it had rushed down. It became exceedingly hot. It drove up with the windows uppermost, and he remembers the torrent of bubbles frothing against

the glass. Every moment he expected this to fly. Then suddenly something like a huge wheel seemed to be released in his head, the padded compartment began spinning about him, and he fainted. His next recollection was of his cabin, and of the doctor's voice.

But that is the substance of the extraordinary story that Elstead related in fragments to the officers of the *Ptarmigan*. He promised to write it all down at a later date. His mind was chiefly occupied with the improvement of his apparatus, which was effected at Rio.

It remains only to tell that on February 2, 1896, he made his second descent into the ocean abyss, with the improvements his first experience suggested. What happened we shall probably never know. He never returned. The *Ptarmigan* beat about over the point of his submersion, seeking him in vain for thirteen days. Then she returned to Rio, and the news was telegraphed to his friends. So the matter remains for the present. But it is hardly probable that no further attempt will be made to verify his strange story of these hitherto unsuspected cities of the deep sea.

STORY TWENTY-TWO

THE APPLE

"I must get rid of it," said the man in the corner of the carriage, abruptly breaking the silence.

Mr. Hinchcliff looked up, hearing imperfectly. He had been lost in the rapt contemplation of the college cap tied by a string to his portmanteau handles—the outward and visible sign of his newly-gained pedagogic position—in the rapt appreciation of the college cap and the pleasant anticipations it excited. For Mr. Hinchcliff had just matriculated at London University, and was going to be junior assistant at the Holmwood Grammar School—a very enviable position. He stared across the carriage at his fellow-traveller.

"Why not give it away?" said this person. "Give it away! Why not?"

He was a tall, dark, sunburnt man with a pale face. His arms were folded tightly, and his feet were on the seat in front of him. He was pulling at a lank black moustache. He stared hard at his toes.

"Why not?" he said.

Mr. Hinchcliff coughed.

The stranger lifted his eyes—they were curious, dark-grey eyes—and stared blankly at Mr. Hinchcliff for the best part of a minute, perhaps. His expression grew to interest.

"Yes," he said slowly. "Why not? And end it."

"I don't quite follow you, I'm afraid," said Mr. Hinchcliff, with another cough.

"You don't quite follow me?" said the stranger quite mechanically, his singular eyes wandering from Mr. Hinchcliff to the bag with its ostentatiously displayed cap, and back to Mr. Hinchcliff's downy face.

"You're so abrupt, you know," apologised Mr. Hinchcliff.

"Why shouldn't I?" said the stranger, following his thoughts. "You are a student?" he said, addressing Mr. Hinchcliff.

"I am—by Correspondence—of the London University," said Mr. Hinchcliff, with irrepressible pride, and feeling nervously at his tie.

"In pursuit of knowledge," said the stranger, and suddenly took his feet off the seat, put his fist on his knees, and stared at Mr. Hinchcliff as though he had never seen a student before.

"Yes," he said, and flung out an index finger. Then he rose, took a bag from the hat-rack, and unlocked it. Quite silently he drew out something round and wrapped in a quantity of silver paper, and unfolded this carefully. He held it out towards Mr. Hinchcliff—a small, very smooth, golden-yellow fruit.

Mr. Hinchcliff's eyes and mouth were open. He did not offer to take this object—if he was intended to take it.

"That," said this fantastic stranger, speaking very slowly, "is the Apple of the Tree of Knowledge. Look at it—small, and bright, and wonderful—Knowledge—and I am going to give it to you."

Mr. Hinchcliff's mind worked painfully for a minute, and then the sufficient explanation, "Mad!" flashed across his brain, and illuminated the whole situation. One humoured madmen. He put his head a little on one side.

"The Apple of the Tree of Knowledge, eigh!" said Mr. Hinchcliff, regarding it with a finely assumed air of interest, and then looking at the interlocutor. "But don't you want to eat it yourself? And besides—how did you come by it?"

"It never fades. I have had it now three months. And it is ever bright and smooth and ripe and desirable, as you see it." He laid his hand on his knee and regarded the fruit musingly. Then he began to wrap it again in the papers, as though he had abandoned his intention of giving it away.

"But how did you come by it?" said Mr. Hinchcliff, who had his argumentative side. "And how do you know that it is the Fruit of the Tree?"

"I bought this fruit," said the stranger, "three months ago—for a drink of water and a crust of bread. The man who gave it to me—because I kept the life in him—was an Armenian. Armenia! that wonderful country, the first of all countries, where the ark of the Flood remains to this day, buried in the glaciers of Mount Ararat. This man, I say, fleeing with others from the Kurds who had come upon them, went up into desolate places among the mountains—places beyond the common knowledge of men. And fleeing from imminent pursuit, they came to a slope high among the mountain-peaks, green with a grass like knife-blades, that cut and slashed most pitilessly at any one who went into it. The Kurds were close behind, and there was nothing for it but to plunge in, and the worst of it was that the paths they made through it at the price of their blood served for the Kurds to follow. Every one of the fugitives was killed save this Armenian and another. He heard the screams and cries of his friends, and the swish of the grass about those who were pursuing them—it was tall grass rising overhead. And then a shouting and answers, and when presently he paused, everything was still. He pushed out again, not understanding, cut and bleeding, until he came out on a steep slope of rocks below a precipice, and then he saw the grass was all on fire, and the smoke of it rose like a veil between him and his enemies."

The stranger paused. "Yes?" said Mr. Hinchcliff. "Yes?"

"There he was, all torn and bloody from the knife-blades of the grass, the rocks blazing under the afternoon sun—the sky

molten brass—and the smoke of the fire driving towards him. He dared not stay there. Death he did not mind, but torture ! Far away beyond the smoke he heard shouts and cries. Women screaming. So he went clambering up a gorge in the rocks—everywhere were bushes with dry branches that stuck like thorns among the leaves—until he clambered over the brow of a ridge that hid him. And then he met his companion, a shepherd, who had also escaped. And, counting cold and famine and thirst as nothing against the Kurds, they went on into the heights, and among the snow and ice. They wandered three whole days.

"The third day came the vision. I suppose hungry men often do see visions, but then there is this fruit." He lifted the wrapped globe in his hand. "And I have heard it, too, from other mountaineers who have known something of the legend. It was in the evening time, when the stars were increasing, that they came down a slope of polished rock into a huge dark valley all set about with strange, contorted trees, and in these trees hung little globes like glow-worm spheres, strange round yellow lights.

"Suddenly this valley was lit far away, many miles away, far down it, with a golden flame marching slowly athwart it, that made the stunted trees against it black as night, and turned the slopes all about them and their figures to the likeness of fiery gold. And at the vision they, knowing the legends of the mountains, instantly knew that it was Eden they saw, or the sentinel of Eden, and they fell upon their faces like men struck dead.

"When they dared to look again the valley was dark for a space, and then the light came again—returning, a burning amber.

"At that the shepherd sprang to his feet, and with a shout began to run down towards the light, but the other man was too fearful to follow him. He stood stunned, amazed, and terrified, watching his companion recede towards the marching glare. And hardly had the shepherd set out when there came a noise like thunder, the beating of invisible wings hurrying up the valley, and a great and terrible fear ; and at that the man who gave me the fruit turned—if he might still escape. And hurrying headlong up the slope again, with that tumult sweeping after him, he stumbled against one of these stunted bushes, and a ripe fruit came off it into his hand. This fruit. Forthwith, the wings and the thunder rolled all about him. He fell and fainted, and when he came to his senses, he was back among the blackened ruins of his own village, and I and the others were attending to the wounded. A vision ? But the golden fruit of the tree was still clutched in his hand. There were others there who knew the legend, knew what that strange fruit might be." He paused. "And this is it," he said.

It was a most extraordinary story to be told in a third-class carriage on a Sussex railway. It was as if the real was a mere veil to the fantastic, and here was the fantastic poking through. "Is it?" was all Mr. Hinchcliff could say.

"The legend," said the stranger, "tells that those thickets of dwarfed trees growing about the garden sprang from the apple that Adam carried in his hand when he and Eve were driven forth. He felt something in his hand, saw the half-eaten apple, and flung it petulantly aside. And there they grow, in that desolate valley, girdled round with the everlasting snows, and there the fiery swords keep ward against the Judgment Day."

"But I thought these things were"—Mr. Hinchcliff paused—"fables—parables rather. Do you mean to tell me that there in Armenia——"

The stranger answered the unfinished question with the fruit in his open hand.

"But you don't know," said Mr. Hinchcliff, "that that is the fruit of the Tree of Knowledge. The man may have had—a sort of mirage, say. Suppose——"

"Look at it," said the stranger.

It was certainly a strange-looking globe, not really an apple, Mr. Hinchcliff saw, and a curious glowing golden colour, almost as though light itself was wrought into its substance. As he looked at it, he began to see more vividly the desolate valley among the mountains, the guarding swords of fire, the strange antiquities of the story he had just heard. He rubbed a knuckle into his eye. "But——" said he.

"It has kept like that, smooth and full, three months. Longer than that it is now by some days. No drying, no withering, no decay."

"And you yourself," said Mr. Hinchcliff, "really believe that——"

"Is the Forbidden Fruit."

There was no mistaking the earnestness of the man's manner and his perfect sanity. "The Fruit of Knowledge," he said.

"Suppose it was?" said Mr. Hinchcliff, after a pause, still staring at it. "But after all," said Mr. Hinchcliff, "it's not my kind of knowledge—not the sort of knowledge. I mean, Adam and Eve have eaten it already."

"We inherit their sins—not their knowledge," said the stranger. "That would make it all clear and bright again. We should see into everything, through everything, into the deepest meaning of everything——"

"Why don't you eat it, then?" said Mr. Hinchcliff, with an inspiration.

"I took it intending to eat it," said the stranger. "Man has fallen. Merely to eat again could scarcely——"

"Knowledge is power," said Mr. Hinchcliff.

"But is it happiness? I am older than you—more than

twice as old. Time after time I have held this in my hand, and my heart has failed me at the thought of all that one might know, that terrible lucidity— Suppose suddenly all the world became pitilessly clear? ”

“ That, I think, would be a great advantage,” said Mr. Hinchcliff, “ on the whole.”

“ Suppose you saw into the hearts and minds of every one about you, into their most secret recesses—people you loved, whose love you valued? ”

“ You’d soon find out the humbugs,” said Mr. Hinchcliff, greatly struck by the idea.

“ And worse—to know yourself, bare of your most intimate illusions. To see yourself in your place. All that your lusts and weaknesses prevented your doing. No merciful perspective.”

“ That might be an excellent thing too. ‘ Know thyself,’ you know.”

“ You are young,” said the stranger.

“ If you don’t care to eat it, and it bothers you, why don’t you throw it away? ”

“ There again, perhaps, you will not understand me. To me, how could one throw away a thing like that, glowing, wonderful? Once one has it, one is bound. But, on the other hand, to *give* it away! To give it away to some one who thirsted after knowledge, who found no terror in the thought of that clear perception——”

“ Of course,” said Mr. Hinchcliff thoughtfully, “ it might be some sort of poisonous fruit.”

And then his eye caught something motionless, the end of a white board black-lettered outside the carriage window. “ —MWOOD,” he saw. He started convulsively. “ Gracious!” said Mr. Hinchcliff. “ Holmwood!”—and the practical present blotted out the mystic realisations that had been stealing upon him.

In another moment he was opening the carriage-door, port-manteau in hand. The guard was already fluttering his green flag. Mr. Hinchcliff jumped out. “ Here!” said a voice behind him, and he saw the dark eyes of the stranger shining and the golden fruit, bright and bare, held out of the open carriage-door. He took it instinctively, the train was already moving:

“ No!” shouted the stranger, and made a snatch at it as if to take it back.

“ Stand away,” cried a country porter, thrusting forward to close the door. The stranger shouted something Mr. Hinchcliff did not catch, head and arm thrust excitedly out of the window, and then the shadow of the bridge fell on him, and in a trice he was hidden. Mr. Hinchcliff stood astonished, staring at the end of the last waggon receding round the bend, and with the wonderful fruit in his hand. For the fraction

of a minute his mind was confused, and then he became aware that two or three people on the platform were regarding him with interest. Was he not the new Grammar School master making his début? It occurred to him that, so far as they could tell, the fruit might very well be the naive refreshment of an orange. He flushed at the thought, and thrust the fruit into his side pocket, where it bulged undesirably. But there was no help for it, so he went towards them, awkwardly concealing his sense of awkwardness, to ask the way to the Grammar School, and the means of getting his portmanteau and the two tin boxes which lay up the platform thither. Of all the odd and fantastic yarns to tell a fellow!

His luggage could be taken on a truck for sixpence, he found, and he could precede it on foot. He fancied an ironical note in the voices. He was painfully aware of his contour.

The curious earnestness of the man in the train, and the glamour of the story he told, had, for a time, diverted the current of Mr. Hinchcliff's thoughts. It drove like a mist before his immediate concerns. Fires that went to and fro! But the preoccupation of his new position, and the impression he was to produce upon Holmwood generally, and the school people in particular, returned upon him with reinvigorating power before he left the station and cleared his mental atmosphere. But it is extraordinary what an inconvenient thing the addition of a soft and rather brightly-golden fruit, not three inches in diameter, may prove to a sensitive youth on his best appearance. In the pocket of his black jacket it bulged dreadfully, spoilt the lines altogether. He passed a little old lady in black, and he felt her eye drop upon the excrescence at once. He was wearing one glove and carrying the other, together with his stick, so that to bear the fruit openly was impossible. In one place, where the road into the town seemed suitably secluded, he took his encumbrance out of his pocket and tried it in his hat. It was just too large, the hat wobbled ludicrously, and just as he was taking it out again, a butcher's boy came driving round the corner.

"Confound it!" said Mr. Hinchcliff.

He would have eaten the thing, and attained omniscience there and then, but it would seem so silly to go into the town sucking a juicy fruit—and it certainly felt juicy. If one of the boys should come by, it might do him a serious injury with his discipline so to be seen. And the juice might make his face sticky and get upon his cuffs—or it might be an acid juice as potent as lemon, and take all the colour out of his clothes.

Then round a bend in the lane came two pleasant sunlit girlish figures. They were walking slowly towards the town and chattering—at any moment they might look round and see a hot-faced young man behind them carrying a kind of phosphorescent yellow tomato! They would be sure to laugh.

"Hang!" said Mr. Hinchcliff, and with a swift jerk sent the

encumbrance flying over the stone wall of an orchard that there abutted on the road. As it vanished, he felt a faint twinge of loss that lasted scarcely a moment. He adjusted the stick and glove in his hand, and walked on, erect and self-conscious, to pass the girls.

But in the darkness of the night Mr. Hinchcliff had a dream, and saw the valley, and the flaming swords, and the contorted trees, and knew that it really was the Apple of the Tree of Knowledge that he had thrown regardlessly away. And he awoke very unhappy.

In the morning his regret had passed, but afterwards it returned and troubled him; never, however, when he was happy or busily occupied. At last, one moonlight night about eleven, when all Holmwood was quiet, his regrets returned with redoubled force, and therewith an impulse to adventure. He slipped out of the house and over the playground wall, went through the silent town to Station Lane, and climbed into the orchard where he had thrown the fruit. But nothing was to be found of it there among the dewy grass and the faint intangible globes of dandelion down.

STORY TWENTY-THREE

UNDER THE KNIFE

“**W**HAT if I die under it?” The thought recurred again and again as I walked home from Haddon’s. It was a purely personal question. I was spared the deep anxieties of a married man, and I knew there were few of my intimate friends but would find my death troublesome chiefly on account of their duty of regret. I was surprised indeed and perhaps a little humiliated, as I turned the matter over, to think how few could possibly exceed the conventional requirement. Things came before me stripped of glamour, in a clear dry light, during that walk from Haddon’s house over Primrose Hill. There were the friends of my youth; I perceived now that our affection was a tradition which we foregathered rather laboriously to maintain. There were the rivals and helpers of my later career: I suppose I had been cold-blooded or undemonstrative—one perhaps implies the other. It may be that even the capacity for friendship is a question of physique. There had been a time in my own life when I had grieved bitterly enough at the loss of a friend; but as I walked home that afternoon the emotional side of my imagination was dormant. I could not pity myself, nor feel sorry for my friends, nor conceive of them as grieving for me.

I was interested in this deadness of my emotional nature—no doubt a concomitant of my stagnating physiology; and my thoughts wandered off along the line it suggested. Once before, in my hot youth, I had suffered a sudden loss of blood and had been within an ace of death. I remembered now that my affections as well as my passions had drained out of me, leaving scarcely anything but a tranquil resignation, a dreg of self-pity. It had been weeks before the old ambitions, and tenderesses, and all the complex moral interplay of a man, had reasserted themselves. Now again I was bloodless; I had been feeding down for a week or more. I was not even hungry. It occurred to me that the real meaning of this numbness might be a gradual slipping away from the pleasure-pain guidance of the animal man. It has been proven, I take it, as thoroughly as anything can be proven in this world, that the higher emotions, the moral feelings, even the subtle tenderesses or love, are evolved from the elemental desires and fears of the simple animal: they are the harness in which man’s mental freedom goes. And it may be that, as death overshadows us, as our possibility of acting diminishes, this complex growth of balanced impulse, propensity, and aversion whose interplay inspires our acts, goes with it. Leaving what?

I was suddenly brought back to reality by an imminent collision with a butcher-boy’s tray. I found that I was

crossing the bridge over the Regent's Park Canal which runs parallel with that in the Zoological Gardens. The boy in blue had been looking over his shoulder at a black barge advancing slowly, towed by a gaunt white horse. In the Gardens a nurse was leading three happy little children over the bridge. The trees were bright green; the spring hopefulness was still unstained by the dusts of summer; the sky in the water was bright and clear, but broken by long waves, by quivering bands of black, as the barge drove through. The breeze was stirring; but it did not stir me as the spring breeze used to do.

Was this dulness of feeling in itself an anticipation? It was curious that I could reason and follow out a network of suggestion as clearly as ever: so, at least, it seemed to me. It was calmness rather than dulness that was coming upon me. Was there any ground for the belief in the presentiment of death? Did a man near to death begin instinctively to withdraw himself from the meshes of matter and sense, even before the cold hand was laid upon his? I felt strangely isolated—isolated without regret—from the life and existence about me. The children playing in the sun and gathering strength and experience for the business of life, the park-keeper gossiping with a nursemaid, the nursing mother, the young couple intent upon each other as they passed me, the trees by the wayside spreading new pleading leaves to the sunlight, the stir in their branches—I had been part of it all, but I had nearly done with it now.

Some way down the Broad Walk I perceived that I was tired, and that my feet were heavy. It was hot that afternoon, and I turned aside and sat down on one of the green chairs that line the way. In a minute I had dozed into a dream, and the tide of my thoughts washed up a vision of the resurrection. I was still sitting in the chair, but I thought myself actually dead, withered, tattered, dried, one eye (I saw) pecked out by birds. "Awake!" cried a voice; and incontinently the dust of the path and the mould under the grass became insurgent. I had never before thought of Regent's Park as a cemetery, but now through the trees, stretching as far as eye could see, I beheld a flat plain of writhing graves and heeling tombstones. There seemed to be some trouble: the rising dead appeared to stifle as they struggled upward, they bled in their struggles, the red flesh was tattered away from the white bones. "Awake!" cried a voice; but I determined I would not rise to such horrors. "Awake!" They would not let me alone. "Wike up!" said an angry voice. A cockney angel! The man who sells the tickets was shaking me, demanding my penny.

I paid my penny, pocketed my ticket, yawned, stretched my legs, and, feeling now rather less torpid, got up and walked on towards Langham Place. I speedily lost myself again in a shifting maze of thoughts about death. Going across Maryle-

bone Road into that crescent at the end of Langham Place, I had the narrowest escape from the shaft of a cab, and went on my way with a palpitating heart and a bruised shoulder. It struck me that it would have been curious if my meditations on my death on the morrow had led to my death that day.

But I will not weary you with more of my experiences that day and the next. I knew more and more certainly that I should die under the operation; at times I think I was inclined to pose to myself. At home I found everything prepared; my room cleared of needless objects and hung with white sheets; a nurse installed and already at loggerheads with my housekeeper. They wanted me to go to bed early, and after a little resistance I obeyed.

In the morning I was very indolent, and though I read my newspapers and the letters that came by the first post, I did not find them very interesting. There was a friendly note from Addison, my old school friend, calling my attention to two discrepancies and a printer's error in my new book, with one from Langridge venting some vexation over Minton. The rest were business communications. I had a cup of tea but nothing to eat. The glow of pain at my side seemed more massive. I knew it was pain, and yet, if you can understand, I did not find it very painful. I had been awake and hot and thirsty in the night, but in the morning bed felt comfortable. In the night-time I had lain thinking of things that were past; in the morning I dozed over the question of immortality. Haddon came, punctual to the minute, with a neat black bag; and Mowbray soon followed. Their arrival stirred me up a little. I began to take a more personal interest in the proceedings. Haddon moved the little octagonal table close to the bedside, and, with his broad black back to me, began taking things out of his bag. I heard the light click of steel upon steel. My imagination, I found, was not altogether stagnant. "Will you hurt me much?" I said in an off-hand tone.

"Not a bit," Haddon answered over his shoulder. "We shall chloroform you. Your heart's as sound as a bell." And as he spoke, I had a whiff of the pungent sweetness of the anæsthetic.

They stretched me out, with a convenient exposure of my side, and, almost before I realised what was happening, the chloroform was being administered. It stings the nostrils, and there is a suffocating sensation, at first. I knew I should die—that this was the end of consciousness for me. And suddenly I felt that I was not prepared for death: I had a vague sense of a duty overlooked—I knew not what. What was it I had not done? I could think of nothing more to do, nothing desirable left in life; and yet I had the strangest disinclination for death. And the physical sensation was painfully oppressive. Of course the doctors did not know they

were going to kill me. Possibly I struggled. Then I fell motionless, and a great silence, a monstrous silence, and an impenetrable blackness came upon me.

There must have been an interval of absolute unconsciousness, seconds or minutes. Then, with a chilly, unemotional clearness, I perceived that I was not yet dead. I was still in my body; but all the multitudinous sensations that come sweeping from it to make up the background of consciousness had gone, leaving me free of it all. No, not free of it all; for as yet something still held me to the poor stark flesh upon the bed—held me, yet not so closely that I did not feel myself external to it, independent of it, straining away from it. I do not think I saw, I do not think I heard, but I perceived all that was going on, and it was as if I both heard and saw. Haddon was bending over me, Mowbray behind me; the scalpel—it was a large scalpel—was cutting my flesh at the side under the flying ribs. It was interesting to see myself cut like cheese, without a pang, without even a qualm. The interest was much of a quality with that one might feel in a game of chess between strangers. Haddon's face was firm and his hand steady; but I was surprised to perceive (*how I know not*) that he was feeling the gravest doubt as to his own wisdom in the conduct of the operation.

Mowbray's thoughts, too, I could see. He was thinking that Haddon's manner showed too much of the specialist. New suggestions came up like bubbles through a stream of frothing meditation, and burst one after another in the little bright spot of his consciousness. He could not help noticing and admiring Haddon's swift dexterity, in spite of his envious quality and his disposition to detract. I saw my liver exposed. I was puzzled at my own condition. I did not feel that I was dead, but I was different in some way from my living self. The grey depression that had weighed on me for a year or more and coloured all my thoughts, was gone. I perceived and thought without any emotional tint at all. I wondered if every one perceived things in this way under chloroform, and forgot it again when he came out of it. It would be inconvenient to look into some heads, and not forget.

Although I did not think that I was dead, I still perceived quite clearly that I was soon to die. This brought me back to the consideration of Haddon's proceedings. I looked into his mind, and saw that he was afraid of cutting a branch of the portal vein. My attention was distracted from details by the curious changes going on in his mind. His consciousness was like the quivering little spot of light which is thrown by the mirror of a galvanometer. His thoughts ran under it like a stream, some through the focus bright and distinct, some shadowy in the half-light of the edge. Just now the little glow was steady; but the least movement on Mowbray's part, the slightest sound from outside, even a faint difference in the

slow movement of the living flesh he was cutting, set the light-spot shivering and spinning. A new sense-impression came rushing up through the flow of thoughts, and lo! the light-spot jerked away towards it, swifter than a frightened fish. It was wonderful to think that upon that unstable, fiftful thing depended all the complex motions of the man, that for the next five minutes, therefore, my life hung upon its movements. And he was growing more and more nervous in his work. It was as if a little picture of a cut vein grew brighter, and struggled to oust from his brain another picture of a cut falling short of the mark. He was afraid: his dread of cutting too little was battling with his dread of cutting too far.

Then, suddenly, like an escape of water from under a lock-gate, a great uprush of horrible realisation set all his thoughts swirling, and simultaneously I perceived that the vein was cut. He started back with a hoarse exclamation, and I saw the brown-purple blood gather in a swift bead, and run rickling. He was horrified. He pitched the red-stained scalpel on to the octagonal table; and instantly both doctors flung themselves upon me, making hasty and ill-conceived efforts to remedy the disaster. "Ice!" said Mowbray, gasping. But I knew that I was killed, though my body still clung to me.

I will not describe their belated endeavours to save me, though I perceived every detail. My perceptions were sharper and swifter than they had ever been in life; my thoughts rushed through my mind with incredible swiftness, but with perfect definition. I can only compare their crowded clarity to the effects of a reasonable dose of opium. In a moment it would all be over, and I should be free. I knew I was immortal, but what would happen I did not know. Should I drift off presently, like a puff of smoke from a gun, in some kind of half-material body, an attenuated version of my material self? Should I find myself suddenly among the innumerable hosts of the dead, and know the world about me for the phantasmagoria it had always seemed? Should I drift to some spiritualistic séance, and there make foolish, incomprehensible attempts to affect a purblind medium? It was a state of unemotional curiosity, of colourless expectation. And then I realised a growing stress upon me, a feeling as though some huge human magnet was drawing me upward out of my body. The stress grew and grew. I seemed an atom for which monstrous forces were fighting. For one brief, terrible moment sensation came back to me. That feeling of falling headlong which comes in nightmares, that feeling a thousand times intensified, that and a black horror swept across my thoughts in a torrent. Then the two doctors, the naked body with its cut side, the little room, swept away from under me and vanished as a speck of foam vanishes down an eddy.

I was in mid-air. Far below was the West End of London,

receding rapidly—for I seemed to be flying swiftly upward—and, as it receded, passing westward, like a panorama. I could see, through the faint haze of smoke, the innumerable roofs chimney-set, the narrow roadways stippled with people and conveyances, the little specks of squares, and the church steeples like thorns sticking out of the fabric. But it spun away as the earth rotated on its axis, and in a few seconds (as it seemed) I was over the scattered clumps of town about Ealing, the little Thames a thread of blue to the south, and the Chiltern Hills and the North Downs coming up like the rim of a basin, far away and faint with haze. Up I rushed. And at first I had not the faintest conception what this head-long rush upward could mean.

Every moment the circle of scenery beneath me grew wider and wider, and the details of town and field, of hill and valley, got more and more hazy and pale and indistinct, a luminous grey was mingled more and more with the blue of the hills and the green of the open meadows; and a little patch of cloud, low and far to the west, shone ever more dazzlingly white. Above, as the veil of atmosphere between myself and outer space grew thinner, the sky, which had been a fair springtime blue at first, grew deeper and richer in colour, passing steadily through the intervening shades until presently it was as dark as the blue sky of midnight, and presently as black as the blackness of a frosty starlight, and at last as black as no blackness I had ever beheld. And first one star and then many, and at last an innumerable host broke out upon the sky: more stars than any one has ever seen from the face of the earth. For the blueness of the sky is the light of the sun and stars sifted and spread abroad blindingly: there is diffused light even in the darkest skies of winter, and we do not see the stars by day only because of the dazzling irradiation of the sun. But now I saw things—I know not how; assuredly with no mortal eyes—and that defect of bedazzlement blinded me no longer. The sun was incredibly strange and wonderful. The body of it was a disc of blinding white light: not yellowish as it seems to those who live upon the earth, but livid white, all streaked with scarlet streaks and rimmed about with a fringe of writhing tongues of red fire. And, shooting half-way across the heavens from either side of it, and brighter than the Milky Way, were two pinions of silver-white, making it look more like than those winged globes I have seen in Egyptian sculpture than anything else I can remember upon earth. These I knew for the solar corona, though I had never seen anything of it but a picture during the days of my earthly life.

When my attention came back to the earth again, I saw that it had fallen very far away from me. Field and town were long since indistinguishable, and all the varied hues of the country were merging into a uniform bright grey, broken only

by the brilliant white of the clouds that lay scattered in flocculent masses over Ireland and the west of England. For now I could see the outlines of the north of France and Ireland, and all this island of Britain save where Scotland passed over the horizon to the north, or where the coast was blurred or obliterated by cloud. The sea was a dull grey, and darker than the land; and the whole panorama was rotating slowly towards the east.

All this had happened so swiftly that, until I was some thousand miles or so from the earth, I had no thought for myself. But now I perceived I had neither hands nor feet, neither parts nor organs, and that I felt neither alarm nor pain. All about me I perceived that the vacancy (for I had already left the air behind) was cold beyond the imagination of man; but it troubled me not. The sun's rays shot through the void, powerless to light or heat until they should strike on matter in their course. I saw things with a serene self-forgetfulness, even as if I were God. And down below there, rushing away from me—countless miles in a second—where a little dark spot on the grey marked the position of London, two doctors were struggling to restore life to the poor hacked and outworn shell I had abandoned. I felt then such release, such serenity as I can compare to no mortal delight I have ever known.

It was only after I had perceived all these things that the meaning of that headlong rush of the earth grew into comprehension. Yet it was so simple, so obvious, that I was amazed at my never anticipating the thing that was happening to me. I had suddenly been cut adrift from matter: all that was material of me was there upon earth, whirling away through space, held to the earth by gravitation, partaking of the earth's inertia, moving in its wreath of epicycles round the sun, and with the sun and the planets on their vast march through space. But the immaterial has no inertia, feels nothing of the pull of matter for matter: where it parts from its garment of flesh, there it remains (so far as space concerns it any longer) immovable in space. I was not leaving the earth: the earth was leaving *me*, and not only the earth, but the whole solar system was streaming past. And about me in space, invisible to me, scattered in the wake of the earth upon its journey, there must be an innumerable multitude of souls, stripped like myself of the material, stripped like myself of the passions of the individual and the generous emotions of the gregarious brute, naked intelligences, things of newborn wonder and thought, marvelling at the strange release that had suddenly come on them!

As I receded faster and faster from the strange white sun in the black heavens, and from the broad and shining earth upon which my being had begun, I seemed to grow, in some incredible manner, vast: vast as regards this world I had left, vast as regards the moments and periods of a human life.

Very soon I saw the full circle of the earth, slightly gibbous, like the moon when she nears her full, but very large ; and the silvery shape of America was now in the noonday blaze wherein (as it seemed) little England had been basking but a few minutes ago. At first the earth was large and shone in the heavens, filling a great part of them ; but every moment she grew smaller and more distant. As she shrunk, the broad moon in its third quarter crept into view over the rim of her disc. I looked for the constellations. Only that part of Aries directly behind the sun, and the Lion, which the earth covered, were hidden. I recognised the tortuous, tattered band of the Milky Way, with Vega very bright between sun and earth ; and Sirius and Orion shone splendid against the unfathomable blackness in the opposite quarter of the heavens. The Pole Star was overhead, and the Great Bear hung over the circle of the earth. And away beneath and beyond the shining corona of the sun were strange groupings of stars I had never seen in my life—notably, a dagger-shaped group that I knew for the Southern Cross. All these were no larger than when they had shone on earth ; but the little stars that one scarcely sees shone now against the setting of black vacancy as brightly as the first-magnitudes had done, while the larger worlds were points of indescribable glory and colour. Aldebaran was a spot of blood-red fire, and Sirius condensed to one point the light of a world of sapphires. And they shone steadily : they did not scintillate, they were calmly glorious. My impressions had an adamant hardness and brightness : there was no blurring softness, no atmosphere, nothing but infinite darkness set with the myriads of these acute and brilliant points and specks of light. Presently, when I looked again, the little earth seemed no bigger than the sun, and it dwindled and turned as I looked until, in a second's space (as it seemed to me), it was halved ; and so it went on swiftly dwindling. Far away in the opposite direction, a little pinkish pin's head of light, shining steadily, was the planet Mars. I swam motionless in vacancy, and, without a trace of terror or astonishment, watched the speck of cosmic dust we call the world fall away from me.

Presently it dawned upon me that my sense of duration had changed : that my mind was moving not faster but infinitely slower, that between each separate impression there was a period of many days. The moon spun once round the earth as I noted this ; and I perceived clearly the motion of Mars in his orbit. Moreover, it appeared as if the time between thought and thought grew steadily greater, until at last a thousand years was but a moment in my perception.

At first the constellations had shone motionless against the black background of infinite space ; but presently it seemed as though the group of stars about Hercules and the Scorpion was contracting, while Orion and Aldebaran and their neigh-

hours were scattering apart. Flashing suddenly out of the darkness there came a flying multitude of particles of rock, glittering like dust-specks in a sunbeam, and encompassed in a faintly luminous haze. They swirled all about me, and vanished again in a twinkling far behind. And then I saw that a bright spot of light, that shone a little to one side of my path, was growing very rapidly larger, and perceived that it was the planet Saturn rushing towards me. Larger and larger it grew, swallowing up the heavens behind it, and hiding every moment a fresh multitude of stars. I perceived its flattened, whirling body, its disc-like belt, and seven of its little satellites. It grew and grew, till it towered enormous; and then I plunged amid a streaming multitude of clashing stones and dancing dust-particles and gas-eddies, and saw for a moment the mighty triple belt like three concentric arches of moonlight above me, its shadow black on the boiling tumult below. These things happened in one-tenth of the time it takes to tell of them. The planet went by like a flash of lightning; for a few seconds it blotted out the sun, and there and then became a mere black, dwindling, winged patch against the light. The earth, the mother mote of my being, I could no longer see.

So with a stately swiftness, in the profoundest silence, the solar system fell from me, as it had been a garment, until the sun was a mere star amid the multitude of stars, with its eddy of planet-specks, lost in the confused glittering of the remoter light. I was no longer a denizen of the solar system: I had come to the Outer Universe, I seemed to grasp and comprehend the whole world of matter. Ever more swiftly the stars closed in about the spot where Antares and Vega had vanished in a luminous haze, until that part of the sky had the semblance of a whirling mass of nebulae, and ever before me yawned vaster gaps of vacant blackness and the stars shone fewer and fewer. It seemed as if I moved towards a point between Orion's belt and sword; and the void about that region opened vaster and vaster every second, an incredible gulf of nothingness, into which I was falling. Faster and ever faster the universe rushed by, a hurry of whirling motes at last, speeding silently into the void. Stars glowing brighter and brighter, with their circling planets catching the light in a ghostly fashion as I neared them, shone out and vanished again into inexistence; faint comets, clusters of meteorites, winking specks of matter, eddying light-points, whizzed past, some perhaps a hundred millions of miles or so from me at most, few nearer, travelling with unimaginable rapidity, shooting constellations, momentary darts of fire, through that black, enormous night. More than anything else it was like a dusty draught, sunbeam-lit. Broader, and wider, and deeper grew the starless space, the vacant Beyond, into which I was being drawn. At last a quarter of the heavens was black and blank, and the whole headlong rush of stellar universe closed in

behind me like a veil of light that is gathered together. I drove away from me like a monstrous jack-o'-lantern driven by the wind. I had come out into the wilderness of space. Ever the vacant blackness grew broader, until the hosts of the stars seemed only like a swarm of fiery specks hurrying away from me, inconceivably remote, and the darkness, the nothingness and emptiness, was about me on every side. Soon the little universe of matter, the cage of points in which I had begun to be, was dwindling, now to a whirling disc of luminous glittering, and now to one minute disc of hazy light. In a little while it would shrink to a point, and at last would vanish altogether.

Suddenly feeling came back to me—feeling in the shape of overwhelming terror: such a dread of those dark vastitudes as no words can describe, a passionate resurgence of sympathy and social desire. Were there other souls, invisible to me as I to them, about me in the blackness? or was I indeed, even as I felt, alone? Had I passed out of being into something that was neither being nor not-being? The covering of the body, the covering of matter, had been torn from me, and the hallucinations of companionship and security. Everything was black and silent. I had ceased to be. I was nothing. There was nothing, save only that infinitesimal dot of light that dwindled in the gulf. I strained myself to hear and see, and for a while there was naught but infinite silence, intolerable darkness, horror, and despair.

Then I saw that about the spot of light into which the whole world of matter had shrunk there was a faint glow. And in a band on either side of that the darkness was not absolute. I watched it for ages, as it seemed to me, and through the long waiting the haze grew imperceptibly more distinct. And then about the band appeared an irregular cloud of the faintest, palest brown. I felt a passionate impatience; but the things grew brighter so slowly that they scarcely seemed to change. What was unfolding itself? What was this strange reddish dawn in the interminable night of space?

The cloud's shape was grotesque. It seemed to be looped along its lower side into four projecting masses, and, above, it ended in a straight line. What phantom was it? I felt assured I had seen that figure before; but I could not think what, nor where, nor when it was. Then the realisation rushed upon me. *It was a clenched Hand.* I was alone in space, alone with this huge, shadowy Hand, upon which the whole Universe of Matter lay like an unconsidered speck of dust. It seemed as though I watched it through vast periods of time. On the forefinger glittered a ring; and the universe from which I had come was but a spot of light upon the ring's curvature. And the thing that the hand gripped had the likeness of a black rod. Through a long eternity I watched this Hand, with the ring and the rod, marvelling and fearing

and waiting helplessly on what might follow. It seemed as though nothing could follow : that I should watch for ever, seeing only the Hand and the thing it held, and understanding nothing of its import. Was the whole universe but a refracting speck upon some greater Being ? Were our worlds but the atoms of another universe, and those again of another, and so on through an endless progression ? And what was I ? Was I indeed immaterial ? A vague persuasion of a body gathering about me came into my suspense. The abysmal darkness about the Hand filled with impalpable suggestions, with uncertain, fluctuating shapes.

Came a sound, like the sound of a tolling bell ; faint, as if infinitely far, muffled as though heard through thick swathings of darkness : a deep, vibrating resonance, with vast gulfs of silence between each stroke. And the Hand appeared to tighten on the rod. And I saw far above the Hand, towards the apex of the darkness, a circle of dim phosphorescence, a ghostly sphere whence these sounds came throbbing ; and at the last stroke the Hand vanished, for the hour had come, and I heard a noise of many waters. But the black rod remained as a great band across the sky. And then a voice, which seemed to run to the uttermost parts of space, spoke, saying, " There will be no more pain."

At that an almost intolerable gladness and radiance rushed upon me, and I saw the circle shining white and bright, and the rod black and shining, and many things else distinct and clear. And the circle was the face of the clock, and the rod the rail of my bed. Haddon was standing at the foot, against the rail, with a small pair of scissors on his fingers ; and the hands of my clock on the mantel over his shoulder were clasped together over the hour of twelve. Mowbray was washing something in a basin at the octagonal table, and at my side I felt a subdued feeling that could scarce be spoken of as pain.

The operation had not killed me. And I perceived, suddenly, that the dull melancholy of half a year was lifted from my mind.

STORY TWENTY-FOUR

THE SEA-RAIDERS

§ I

UNTIL the extraordinary affair at Sidmouth, the peculiar species *Haploteuthis ferox* was known to science only generically, on the strength of a half-digested tentacle obtained near the Azores, and a decaying body pecked by birds and nibbled by fish, found early in 1896 by Mr. Jennings, near Land's End.

In no department of zoological science, indeed, are we quite so much in the dark as with regard to the deep-sea cephalopods. A mere accident, for instance, it was that led to the Prince of Monaco's discovery of nearly a dozen new forms in the summer of 1895, a discovery in which the before-mentioned tentacle was included. It chanced that a cachalot was killed off Terceira by some sperm whalers, and in its last struggles charged almost to the Prince's yacht, missed it, rolled under, and died within twenty yards of his rudder. And in its agony it threw up a number of large objects, which the Prince, dimly perceiving they were strange and important, was, by a happy expedient, able to secure before they sank. He set his screws in motion, and kept them circling in the vortices thus created until a boat could be lowered. And these specimens were whole cephalopods and fragments of cephalopods, some of gigantic proportions, and almost all of them unknown to science!

It would seem, indeed, that these large and agile creatures, living in the middle depths of the sea, must, to a large extent, for ever remain unknown to us, since under water they are too nimble for nets, and it is only by such rare unlooked-for accidents that specimens can be obtained. In the case of *Haploteuthis ferox*, for instance, we are still altogether ignorant of its habitat, as ignorant as we are of the breeding-ground of the herring or the sea-ways of the salmon. And zoologists are altogether at a loss to account for its sudden appearance on our coast. Possibly it was the stress of a hunger migration that drove it hither out of the deep. But it will be, perhaps, better to avoid necessarily inconclusive discussion, and to proceed at once with our narrative.

The first human being to set eyes upon a living *Haploteuthis*—the first human being to survive, that is, for there can be little doubt now that the wave of bathing fatalities and boating accidents that travelled along the coast of Cornwall and Devon in early May was due to this cause—was a retired tea-dealer of the name of Fison, who was stopping at a Sidmouth boarding-house. It was in the afternoon, and he was

walking along the cliff path between Sidmouth and Ladram Bay. The cliffs in this direction are very high, but down the red face of them in one place a kind of ladder staircase has been made. He was near this when his attention was attracted by what at first he thought to be a cluster of birds struggling over a fragment of food that caught the sunlight, and glistened pinkish-white. The tide was right out, and this object was not only far below him, but remote across a broad waste of rock reefs covered with dark seaweed and interspersed with silvery shining tidal pools. And he was, moreover, dazzled by the brightness of the farther water.

In a minute, regarding this again, he perceived that his judgment was in fault, for over this struggle circled a number of birds, jackdaws and gulls for the most part, the latter gleaming blindingly when the sunlight smote their wings, and they seemed minute in comparison with it. And his curiosity was, perhaps, aroused all the more strongly because of his first insufficient explanations.

As he had nothing better to do than amuse himself, he decided to make this object, whatever it was, the goal of his afternoon walk, instead of Ladram Bay, conceiving it might perhaps be a great fish of some sort, stranded by some chance, and flapping about in its distress. And so he hurried down the long steep ladder, stopping at intervals of thirty feet or so to take breath and scan the mysterious movement.

At the foot of the cliff he was, of course, nearer his object than he had been; but, on the other hand, it now came up against the incandescent sky, beneath the sun, so as to seem dark and indistinct. Whatever was pinkish of it was now hidden by a skerry of weedy boulders. But he perceived that it was made up of seven rounded bodies, distinct or connected, and that the birds kept up a constant croaking and screaming, but seemed afraid to approach it too closely.

Mr. Fison, torn by curiosity, began picking his way across the wave-worn rocks, and, finding the wet seaweed that covered them thickly rendered them extremely slippery, he stopped, removed his shoes and socks, and coiled his trousers above his knees. His object was, of course, merely to avoid stumbling into the rocky pools about him, and perhaps he was rather glad, as all men are, of an excuse to resume, even for a moment, the sensations of his boyhood. At any rate, it is to this, no doubt, that he owes his life.

He approached his mark with all the assurance which the absolute security of this country against all forms of animal life gives its inhabitants. The round bodies moved to and fro, but it was only when he surmounted the skerry of boulders I have mentioned that he realised the horrible nature of the discovery. It came upon him with some suddenness.

The rounded bodies fell apart as he came into sight over the ridge, and displayed the pinkish object to be the partially

devoured body of a human being, but whether of a man or woman he was unable to say. And the rounded bodies were new and ghastly-looking creatures, in shape somewhat resembling an octopus, and with huge and very long and flexible tentacles, coiled copiously on the ground. The skin had a glistening texture, unpleasant to see, like shiny leather. The downward bend of the tentacle-surrounded mouth, the curious excrescence at the bend, the tentacles, and the large intelligent eyes, gave the creatures a grotesque suggestion of a face. They were the size of a fair-sized swine about the body, and the tentacles seemed to him to be many feet in length. There were, he thinks, seven or eight at least of the creatures. Twenty yards beyond them, amid the surf of the now returning tide, two others were emerging from the sea.

Their bodies lay flatly on the rocks, and their eyes regarded him with evil interest, but it does not appear that Mr. Fison was afraid, or that he realised that he was in any danger. Possibly his confidence is to be ascribed to the limpness of their attitudes. But he was horrified, of course, and intensely excited and indignant at such revolting creatures preying upon human flesh. He thought they had chanced upon a drowned body. He shouted to them, with the idea of driving them off, and, finding they did not budge, cast about him, picked up a big rounded lump of rock, and flung it at one.

And then, slowly uncoiling their tentacles, they all began moving towards him—creeping at first deliberately, and making a soft purring sound to each other.

In a moment Mr. Fison realised that he was in danger. He shouted again, threw both his boots and started off, with a leap, forthwith. Twenty yards off he stopped and faced about, judging them slow, and behold! the tentacles of their leader were already pouring over the rocky ridge on which he had just been standing!

At that he shouted again, but this time not threatening, but a cry of dismay, and began jumping, striding, slipping, wading across the uneven expanse between him and the beach. The tall red cliffs seemed suddenly at a vast distance, and he saw, as though they were creatures in another world, two minute workmen engaged in the repair of the ladder-way, and little suspecting the race for life that was beginning below them. At one time he could hear the creatures splashing in the pools not a dozen feet behind him, and once he slipped and almost fell.

They chased him to the very foot of the cliffs, and desisted only when he had been joined by the workmen at the foot of the ladder-way up the cliff. All three of the men pelted them with stones for a time, and then hurried to the cliff top and along the path towards Sidmouth, to secure assistance and a boat, and to rescue the desecrated body from the clutches of these abominable creatures.

§ 2

And, as if he had not already been in sufficient peril that day, Mr. Fison went with the boat to point out the exact spot of his adventure.

As the tide was down, it required a considerable detour to reach the spot, and when at last they came off the ladder-way, the mangled body had disappeared. The water was now running in, submerging first one slab of slimy rock and then another, and the four men in the boat—the workmen, that is, the boatman, and Mr. Fison—now turned their attention from the bearings off shore to the water beneath the keel.

At first they could see little below them, save a dark jungle of laminaria, with an occasional darting fish. Their minds were set on adventure, and they expressed their disappointment freely. But presently they saw one of the monsters swimming through the water seaward, with a curious rolling motion that suggested to Mr. Fison the spinning roll of a captive balloon. Almost immediately after, the waving streamers of laminaria were extraordinarily perturbed, parted for a moment, and three of these beasts became darkly visible, struggling for what was probably some fragment of the drowned man. In a moment the copious olive-green ribbons had poured again over this writhing group.

At that all four men, greatly excited, began beating the water with oars and shouting, and immediately they saw a tumultuous movement among the weeds. They desisted to see more clearly, and as soon as the water was smooth, they saw, as it seemed to them, the whole sea bottom among the weeds set with eyes.

“Ugly swine!” cried one of the men. “Why, there’s dozens!”

And forthwith the things began to rise through the water about them. Mr. Fison has since described to the writer this startling eruption out of the waving laminaria meadows. To him it seemed to occupy a considerable time, but it is probable that really it was an affair of a few seconds only. For a time nothing but eyes, and then he speaks of tentacles streaming out and parting the weed fronds this way and that. Then these things, growing larger, until at last the bottom was hidden by their intercoiling forms, and the tips of tentacles rose darkly here and there into the air above the swell of the waters.

One came up boldly to the side of the boat, and, clinging to this with three of its sucker-set tentacles, threw four others over the gunwale, as if with an intention either of oversetting the boat or of clambering into it. Mr. Fison at once caught up the boathook, and, jabbing furiously at the soft tentacles, forced it to desist. He was struck in the back and almost pitched overboard by the boatman, who was using his oar to resist a similar attack on the other side of the boat. But the

tentacles on either side at once relaxed their hold at this, slid out of sight, and splashed into the water.

"We'd better get out of this," said Mr. Fison, who was trembling violently. He went to the tiller, while the boatman and one of the workmen seated themselves and began rowing. The other workman stood up in the fore part of the boat, with the boathook, ready to strike any more tentacles that might appear. Nothing else seems to have been said. Mr. Fison had expressed the common feeling beyond amendment. In a hushed, scared mood, with faces white and drawn, they set about escaping from the position into which they had so recklessly blundered.

But the oars had scarcely dropped into the water before dark, tapering, serpentine ropes had bound them, and were about the rudder; and creeping up the sides of the boat with a looping motion came the suckers again. The men gripped their oars and pulled, but it was like trying to move a boat in a floating raft of weeds. "Help here!" cried the boatman, and Mr. Fison and the second workman rushed to help lug at the oar.

Then the man with the boathook—his name was Ewan, or Ewen—sprang up with a curse, and began striking downward over the side, as far as he could reach, at the bank of tentacles that now clustered along the boat's bottom. And, at the same time, the two rowers stood up to get a better purchase for the recovery of their oars. The boatman handed his to Mr. Fison, who lugged desperately, and, meanwhile, the boatman opened a big clasp-knife, and, leaning over the side of the boat, began hacking at the spiring arms upon the oar shaft.

Mr. Fison, staggering with the quivering rocking of the boat, his teeth set, his breath coming short, and the veins starting on his hands as he pulled at his oar, suddenly cast his eyes seaward. And there, not fifty yards off, across the long rollers of the incoming tide, was a large boat standing in towards them, with three women and a little child in it. A boatman was rowing, and a little man in a pink-ribboned straw hat and whites stood in the stern, hailing them. For a moment, of course, Mr. Fison thought of help, and then he thought of the child. He abandoned his oar forthwith, threw up his arms in a frantic gesture, and screamed to the party in the boat to keep away "for God's sake!" It says much for the modesty and courage of Mr. Fison that he does not seem to be aware that there was any quality of heroism in his action at this juncture. The oar he had abandoned was at once drawn under, and presently reappeared floating about twenty yards away.

At the same moment Mr. Fison felt the boat under him lurch violently, and a hoarse scream, a prolonged cry of terror from Hill, the boatman, caused him to forget the party of excursionists altogether. He turned, and saw Hill crouching by the forward rowlock, his face convulsed with terror, and his right

arm over the side and drawn tightly down. He gave now a succession of short, sharp cries, "Oh ! oh ! oh !—oh !" Mr. Fison believes that he must have been hacking at the tentacles below the water-line, and have been grasped by them, but, of course, it is quite impossible to say now certainly what had happened. The boat was heeling over, so that the gunwale was within ten inches of the water, and both Ewan and the other labourer were striking down into the water, with oar and boat-hook, on either side of Hill's arm. Mr. Fison instinctively placed himself to counterpoise them.

Then Hill, who was a burly, powerful man, made a strenuous effort, and rose almost to a standing position. He lifted his arm, indeed, clean out of the water. Hanging to it was a complicated tangle of brown ropes ; and the eyes of one of the brutes that had hold of him, glaring straight and resolute, showed momentarily above the surface. The boat heeled more and more, and the green-brown water came pouring in a cascade over the side. Then Hill slipped and fell with his ribs across the side, and his arm and the mass of tentacles about it splashed back into the water. He rolled over ; his boot kicked Mr. Fison's knee as that gentleman rushed forward to seize him, and in another moment fresh tentacles had whipped about his waist and neck, and after a brief, convulsive struggle, in which the boat was nearly capsized, Hill was lugged overboard. The boat righted with a violent jerk that all but sent Mr. Fison over the other side, and hid the struggle in the water from his eyes.

He stood staggering to recover his balance for a moment, and as he did so, he became aware that the struggle and the inflowing tide had carried them close upon the weedy rocks again. Not four yards off a table of rock still rose in rhythmic movements above the inwash of the tide. In a moment Mr. Fison seized the oar from Ewan, gave one vigorous stroke, then, dropping it, ran to the bows and leapt. He felt his feet slide over the rock, and, by a frantic effort, leapt again towards a farther mass. He stumbled over this, came to his knees, and rose again.

"Look out !" cried some one, and a large drab body struck him. He was knocked flat into a tidal pool by one of the workmen, and as he went down he heard smothered, choking cries, that he believed at the time came from Hill. Then he found himself marvelling at the shrillness and variety of Hill's voice. Some one jumped over him, and a curving rush of foamy water poured over him, and passed. He scrambled to his feet dripping, and, without looking seaward, ran as fast as his terror would let him shoreward. Before him, over the flat space of scattered rocks, stumbled the two workmen—one a dozen yards in front of the other.

He looked over his shoulder at last, and, seeing that he was not pursued, faced about. He was astonished. From the

moment of the rising of the cephalopods out of the water, he had been acting too swiftly to fully comprehend his actions. Now it seemed to him as if he had suddenly jumped out of an evil dream.

For there were the sky, cloudless and blazing with the afternoon sun, the sea weltering under its pitiless brightness, the soft creamy foam of the breaking water, and the low, long, dark ridges of rock. The righted boat floated, rising and falling gently on the swell about a dozen yards from shore. Hill and the monsters, all the stress and tumult of that fierce fight for life, had vanished as though they had never been.

Mr. Fison's heart was beating violently; he was throbbing to the finger-tips, and his breath came deep.

There was something missing. For some seconds he could not think clearly enough what this might be. Sun, sky, sea, rocks—what was it? Then he remembered the boatload of excursionists. It had vanished. He wondered whether he had imagined it. He turned, and saw the two workmen standing side by side under the projecting masses of the tall pink cliffs. He hesitated whether he should make one last attempt to save the man Hill. His physical excitement seemed to desert him suddenly, and leave him aimless and helpless. He turned shoreward, stumbling and wading towards his two companions.

He looked back again, and there were now two boats floating, and the one farthest out at sea pitched clumsily, bottom upward.

§ 3

So it was *Haploteuthis ferox* made its appearance upon the Devonshire coast. So far, this has been its most serious aggression. Mr. Fison's account, taken together with the wave of boating and bathing casualties to which I have already alluded, and the absence of fish from the Cornish coasts that year, points clearly to a shoal of these voracious deep-sea monsters prowling slowly along the sub-tidal coastline. Hunger migration has, I know, been suggested as the force that drove them hither; but, for my own part, I prefer to believe the alternative theory of Hemsley. Hemsley holds that a pack or shoal of these creatures may have become enamoured of human flesh by the accident of a foundered ship sinking among them, and have wandered in search of it out of their accustomed zone; first waylaying and following ships, and so coming to our shores in the wake of the Atlantic traffic. But to discuss Hemsley's cogent and admirably-stated arguments would be out of place here.

It would seem that the appetites of the shoal were satisfied by the catch of eleven people—for so far as can be ascertained, there were ten people in the second boat, and certainly these

creatures gave no further signs of their presence off Sidmouth that day. The coast between Seaton and Budleigh Salterton was patrolled all that evening and night by four Preventive Service boats, the men in which were armed with harpoons and cutlasses, and as the evening advanced, a number of more or less similarly equipped expeditions, organised by private individuals, joined them. Mr. Fison took no part in any of these expeditions.

About midnight excited hails were heard from a boat about a couple of miles out at sea to the south-east of Sidmouth, and a lantern was seen waving in a strange manner to and fro and up and down. The nearer boats at once hurried towards the alarm. The venturesome occupants of the boat, a seaman, a curate, and two schoolboys, had actually seen the monsters passing under their boat. The creatures, it seems, like most deep-sea organisms, were phosphorescent, and they had been floating, five fathoms deep or so, like creatures of moonshine through the blackness of the water, their tentacles retracted and as if asleep, rolling over and over, and moving slowly in a wedge-like formation towards the south-east.

These people told their story in gesticulated fragments, as first one boat drew alongside and then another. At last there was a little fleet of eight or nine boats collected together, and from them a tumult, like the chatter of a market-place, rose into the stillness of the night. There was little or no disposition to pursue the shoal, the people had neither weapons nor experience for such a dubious chase, and presently—even with a certain relief, it may be—the boats turned shoreward.

And now to tell what is perhaps the most astonishing fact in this whole astonishing raid. We have not the slightest knowledge of the subsequent movements of the shoal, although the whole south-west coast was now alert for it. But it may, perhaps, be significant that a cachalot was stranded off Sark on June 3. Two weeks and three days after this Sidmouth affair, a living *Haploteuthis* came ashore on Calais sands. It was alive, because several witnesses saw its tentacles moving in a convulsive way. But it is probable that it was dying. A gentleman named Pouchet obtained a rifle and shot it.

That was the last appearance of a living *Haploteuthis*. No others were seen on the French coast. On the 15th of June a dead body, almost complete, was washed ashore near Torquay, and a few days later a boat from the Marine Biological station, engaged in dredging off Plymouth, picked up a rotting specimen, slashed deeply with a cutlass wound. How the former specimen had come by its death it is impossible to say. And on the last day of June, Mr. Egbert Caine, an artist, bathing near Newlyn, threw up his arms, shrieked, and was drawn under. A friend bathing with him made no attempt to save him, but swam at once for the shore. This is the last fact to tell of this extraordinary raid from the deeper sea. Whether it is really

the last of these horrible creatures it is, as yet, premature to say. But it is believed, and certainly it is to be hoped, that they have returned now, and returned for good, to the sunless depths of the middle seas, out of which they have so strangely and so mysteriously arisen.

STORY TWENTY-FIVE

POLLOCK AND THE PORROH MAN

IT was in a swampy village on the lagoon river behind the Turner Peninsula that Pollock's first encounter with the Porroh man occurred. The women of that country are famous for their good looks—they are Gallinas with a dash of European blood that dates from the days of Vasco de Gama and the English slave-traders, and the Porroh man, too, was possibly inspired by a faint Caucasian taint in his composition. (It's a curious thing to think that some of us may have distant cousins eating men on Sherboro Island or raiding with the Sofas). At any rate, the Porroh man stabbed the woman to the heart as though he had been a mere low-class Italian, and very narrowly missed Pollock. But Pollock, using his revolver to parry the lightning stab which was aimed at his deltoid muscle, sent the iron dagger flying, and, firing, hit the man in the hand.

He fired again and missed, knocking a sudden window out of the wall of the hut. The Porroh man stooped in the doorway, glancing under his arm at Pollock. Pollock caught a glimpse of his inverted face in the sunlight, and then the Englishman was alone, sick and trembling with the excitement of the affair, in the twilight of the place. It had all happened in less time than it takes to read about it.

The woman was quite dead, and having ascertained this, Pollock went to the entrance of the hut and looked out. Things outside were dazzling bright. Half a dozen of the porters of the expedition were standing up in a group near the green huts they occupied, and staring towards him, wondering what the shots might signify. Behind the little group of men was the broad stretch of black fetid mud by the river, a green carpet of rafts of papyrus and water-grass, and then the leaden water. The mangroves beyond the stream loomed indistinctly through the blue haze. There were no signs of excitement in the squat village, whose fence was just visible above the cane-grass.

Pollock came out of the hut cautiously and walked towards the river, looking over his shoulder at intervals. But the Porroh man had vanished. Pollock clutched his revolver nervously in his hand.

One of his men came to meet him, and as he came, pointed to the bushes behind the hut in which the Porroh man had disappeared. Pollock had an irritating persuasion of having made an absolute fool of himself; he felt bitter, savage, at the turn things had taken. At the same time, he would have to tell Waterhouse—the moral, exemplary, cautious Waterhouse—who would inevitably take the matter seriously. Pollock cursed bitterly at his luck, at Waterhouse, and especially at

the West Coast of Africa. He felt consummately sick of the expedition. And in the back of his mind all the time was a speculative doubt where precisely within the visible horizon the Porroh man might be.

It is perhaps rather shocking, but he was not at all upset by the murder that had just happened. He had seen so much brutality during the last three months, so many dead women, burnt huts, drying skeletons, up the Kittam River in the wake of the Sofa cavalry, that his senses were blunted. What disturbed him was the persuasion that this business was only beginning.

He swore savagely at the black, who ventured to ask a question, and went on into the tent under the orange-trees where Waterhouse was lying, feeling exasperatingly like a boy going into the headmaster's study.

Waterhouse was still sleeping off the effects of his last dose of chlorodyne, and Pollock sat down on a packing-case beside him, and, lighting his pipe, waited for him to wake. About him were scattered the pots and weapons Waterhouse had collected from the Mendi people, and which he had been repacking for the canoe voyage to Sulyma.

Presently Waterhouse woke up, and after judicial stretching, decided he was all right again. Pollock got him some tea. Over the tea the incidents of the afternoon were described by Pollock, after some preliminary beating about the bush. Waterhouse took the matter even more seriously than Pollock had anticipated. He did not simply disapprove, he scolded, he insulted.

"You're one of those infernal fools who think a black man isn't a human being," he said. "I can't be ill a day without you must get into some dirty scrape or other. This is the third time in a month that you have come crossways-on with a native, and this time you're in for it with a vengeance. Porroh, too! They're down upon you enough as it is, about that idol you wrote your silly name on. And they're the most vindictive devils on earth! You make a man ashamed of civilisation. To think you come of a decent family! If ever I cumber myself with a vicious, stupid young lout like you again——"

"Steady on, now," snarled Pollock, in the tone that always exasperated Waterhouse; "steady on."

At that Waterhouse became speechless. He jumped to his feet.

"Look here, Pollock," he said, after a struggle to control his breath. "You must go home. I won't have you any longer. I'm ill enough as it is through you——"

"Keep your hair on," said Pollock, staring in front of him. "I'm ready enough to go."

Waterhouse became calmer again. He sat down on the camp-stool. "Very well," he said. "I don't want a row, Pollock, you know, but it's confoundedly annoying to have

one's plans put out by this kind of thing. I'll come to Sulyma with you, and see you safe aboard——"

"You needn't," said Pollock. "I can go alone. From here."

"Not far," said Waterhouse. "You don't understand this Porroh business."

"How should I know she belonged to a Porroh man?" said Pollock bitterly.

"Well, she did," said Waterhouse; "and you can't undo the thing. Go alone, indeed! I wonder what they'd do to you. You don't seem to understand that this Porroh hokey-pokey rules this country, is its law, religion, constitution, medicine, magic. . . . They appoint the chiefs. The Inquisition, at its best, couldn't hold a candle to these chaps. He will probably set Awajale, the chief here, on to us. It's lucky our porters are Mendis. We shall have to shift this little settlement of ours. . . . Confound you, Pollock! And, of course, you must go and muss him."

He thought, and his thoughts seemed disagreeable. Presently he stood up and took his rifle. "I'd keep close for a bit, if I were you," he said over his shoulder as he went out. "I'm going out to see what I can find out about it."

Pollock remained sitting in the tent, meditating. "I was meant for a civilised life," he said to himself regretfully, as he filled his pipe. "The sooner I get back to London or Paris the better for me."

His eye fell on the sealed case in which Waterhouse had put the featherless poisoned arrows they had bought in the Mendi country. "I wish I had hit the beggar somewhere vital," said Pollock viciously.

Waterhouse came back after a long interval. He was not communicative, though Pollock asked him questions enough. The Porroh man, it seems, was a prominent member of that mystical society. The village was interested, but not threatening. No doubt the witch-doctor had gone into the bush. He was a great witch-doctor. "Of course, he's up to something," said Waterhouse, and became silent.

"But what can he do?" asked Pollock, unheeded.

"I must get you out of this. There's something brewing, or things would not be so quiet," said Waterhouse, after a gap of silence. Pollock wanted to know what the brew might be. "Dancing in a circle of skulls," said Waterhouse; "brewing a stink in a copper pot." Pollock wanted particulars. Waterhouse was vague, Pollock pressing. At last Waterhouse lost his temper. "How the devil should I know?" he said to Pollock's twentieth inquiry what the Porroh man would do. "He tried to kill you off-hand in the hut. Now, I fancy he will try something more elaborate. But you'll see fast enough. I don't want to help unnerve you. It's probably all nonsense."

That night, as they were sitting at their fire, Pollock again

tried to draw Waterhouse out on the subject of Porroh methods. "Better get to sleep," said Waterhouse, when Pollock's bent became apparent; "we start early to-morrow. You may want all your nerve about you."

"But what line will he take?"

"Can't say. They're versatile people. They know a lot of rum dodges. You'd better get that copper-devil, Shakespear, to talk."

There was a flash and a heavy bang out of the darkness behind the huts, and a clay bullet came whistling close to Pollock's head. This, at least, was crude enough. The blacks and half-breeds sitting and yarning round their own fire jumped up, and some one fired into the dark.

"Better go into one of the huts," said Waterhouse quietly, still sitting unmoved.

Pollock stood up by the fire and drew his revolver. Fighting, at least, he was not afraid of. But a man in the dark is in the best of armour. Realising the wisdom of Waterhouse's advice, Pollock went into the tent and lay down there.

What little sleep he had was disturbed by dreams, variegated dreams, but chiefly of the Porroh man's face, upside down, as he went out of the hut, and looked up under his arm. It was odd that this transitory impression should have stuck so firmly in Pollock's memory. Moreover, he was troubled by queer pains in his limbs.

In the white haze of the early morning, as they were loading the canoes, a barbed arrow suddenly appeared quivering in the ground close to Pollock's foot. The boys made a perfunctory effort to clear out the thicket, but it led to no capture.

After these two occurrences, there was a disposition on the part of the expedition to leave Pollock to himself, and Pollock became, for the first time in his life, anxious to mingle with blacks. Waterhouse took one canoe, and Pollock, in spite of a friendly desire to chat with Waterhouse, had to take the other. He was left all alone in the front part of the canoe, and he had the greatest trouble to make the men—who did not love him—keep to the middle of the river, a clear hundred yards or more from either shore. However, he made Shakespear, the Freetown half-breed, come up to his own end of the canoe and tell him about Porroh, which Shakespear, failing in his attempts to leave Pollock alone, presently did with considerable freedom and gusto.

The day passed. The canoe glided swiftly along the ribbon of lagoon water, between the drift of water-figs, fallen trees, papyrus, and palm-wine palms, and with the dark mangrove swamp to the left, through which one could hear now and then the roar of the Atlantic surf. Shakespear told in his soft, blurred English of how the Porroh could cast spells; how men withered up under their malice; how they could send dreams and devils; how they tormented and killed the sons of Ijibu;

how they kidnapped a white trader from Sulyma who had maltreated one of the sect, and how his body looked when it was found. And Pollock after each narrative cursed under his breath at the want of missionary enterprise that allowed such things to be, and at the inert British Government that ruled over this dark heathendom of Sierra Leone. In the evening they came to the Kasi Lake, and sent a score of crocodiles lumbering off the island on which the expedition camped for the night.

The next day they reached Sulyma, and smelt the sea breeze, but Pollock had to put up there for five days before he would go on to Freetown. Waterhouse, considering him to be comparatively safe here, and within the pale of Freetown influence, left him and went back with the expedition to Gbemba, and Pollock became very friendly with Perera, the only resident white trader at Sulyma—so friendly, indeed, that he went about with him everywhere. Perera was a little Portuguese Jew, who had lived in England, and he appreciated the Englishman's friendliness as a great compliment.

For two days nothing happened out of the ordinary; for the most part Pollock and Perera played nap—the only game they had in common—and Pollock got into debt. Then, on the second evening, Pollock had a disagreeable intimation of the arrival of the Porroh man in Sulyma by getting a flesh-wound in the shoulder from a lump of filed iron. It was a long shot, and the missile had nearly spent its force when it hit him. Still it conveyed its message plainly enough. Pollock sat up in his hammock, revolver in hand, all that night, and next morning confided, to some extent, in the Anglo-Portuguese.

Perera took the matter seriously. He knew the local customs pretty thoroughly. "It is a personal question, you must know. It is revenge. And of course he is hurried by your leaving de country. None of de natives or half-breeds will interfere wid him very much—unless you make it wort deir while. If you come upon him suddenly, you might shoot him. But den he might shoot you.

"Den dere's dis—infernal magic," said Perera. "Of course, I don't believe in it—superstition—but still it's not nice to tink dat wherever you are, dere is a black man, who spends a moonlight night now and den a-dancing about a fire to send you bad dreams. . . . Had any bad dreams?"

"Rather," said Pollock. "I keep on seeing the beggar's head upside down grinning at me and showing all his teeth as he did in the hut, and coming close up to me, and then going ever so far off, and coming back. It's nothing to be afraid of, but somehow it simply paralysés me with terror in my sleep. Queer things—dreams. I know it's a dream all the time, and I can't wake up from it."

"It's probably only fancy," said Perera. "Den my niggers say Porroh men can send snakes. Seen any snakes lately?"

"Only one. I killed him this morning, on the floor near my hammock. Almost trod on him as I got up."

"Ah!" said Perera, and then, reassuringly, "Of course it is a—coincidence. Still I would keep my eyes open. Den dere's pains in de bones."

"I thought they were due to miasma," said Pollock.

"Probably dey are. When did dey begin?"

Then Pollock remembered that he first noticed them the night after the fight in the hut. "It's my opinion he don't want to kill you," said Perera—"at least not yet. I've heard deir idea is to scare and worry a man wid deir spells, and narrow misses, and rheumatic pains, and bad dreams, and all dat, until he's sick of life. Of course, it's all talk, you know. You mustn't worry about it. . . . But I wonder what he'll be up to next."

"I shall have to be up to something first," said Pollock, staring gloomily at the greasy cards that Perera was putting on the table. "It don't suit my dignity to be followed about, and shot at, and blighted in this way. I wonder if Porroh hokey-pokey upsets your luck at cards."

He looked at Perera suspiciously.

"Very likely it does," said Perera warmly, shuffling. "Dey are wonderful people."

That afternoon Pollock killed two snakes in his hammock, and there was also an extraordinary increase in the number of red ants that swarmed over the place, and these annoyances put him in a fit temper to talk over business with a certain Mendi rough he had interviewed before. The Mendi rough showed Pollock a little iron dagger, and demonstrated where one struck in the neck, in a way that made Pollock shiver, and in return for certain considerations Pollock promised him a double-barrelled gun with an ornamental lock.

In the evening, as Pollock and Perera were playing cards, the Mendi rough came in through the doorway, carrying something in a blood-soaked piece of native cloth.

"Not here!" said Pollock very hurriedly. "Not here!"

But he was not quick enough to prevent the man, who was anxious to get to Pollock's side of the bargain, from opening the cloth and throwing the head of the Porroh man upon the table. It bounded from there on to the floor, leaving a red trail on the cards, and rolled into a corner, where it came to rest upside down, but glaring hard at Pollock.

Perera jumped up as the thing fell among the cards, and began in his excitement to gabble in Portuguese. The Mendi was bowing, with the red cloth in his hand. "De gun!" he cried. Pollock stared back at the head in the corner. It bore exactly the expression it had in his dreams. Something seemed to snap in his own brain as he looked at it.

Then Perera found his English again.

"You got him killed?" he said. "You did not kill him yourself?"

"Why should I?" said Pollock.

"But he will not be able to take it off now!"

"Take *what* off?" said Pollock.

"And all dese cards are spoiled!"

"*What* do you mean by taking off?" said Pollock.

"You must send me a new pack from Freetown. You can buy dem dere."

"But—take it off ' ' "

"It is only superstition. I forgot. De niggers say dat if de witches—he was a witch—— But it is rubbish. . . . You must make de Porroh man take it off, or kill him yourself. . . . It is very silly."

Pollock swore under his breath, still staring hard at the head in the corner.

"I can't stand that glare," he said. Then suddenly he rushed at the thing and kicked it. It rolled some yards or so, and came to rest in the same position as before, upside down, and looking at him.

"He is ugly," said the Anglo-Portuguese. "Very ugly. Dey do it on deir faces with little knives."

Pollock would have kicked the head again, but the Mendi man touched him on the arm. "De gun?" he said, looking nervously at the head.

"Two—if you will take that beastly thing away," said Pollock.

The Mendi shook his head, and intimated that he only wanted one gun now due to him, and for which he would be obliged. Pollock found neither cajolery nor bullying any good with him. Perera had a gun to sell (at a profit of three hundred per cent.), and with that the man presently departed. Then Pollock's eyes, against his will, were recalled to the thing on the floor.

"It is funny dat his head keeps upside down," said Perera, with an uneasy laugh. "His brains must be heavy, like de weight in de little images one sees dat keep always upright wid lead in dem. You will take him wiv you when you go presently. You might take him now. De cards are all spoilt. Dere is a man sell dem in Freetown. De room is in a filthy mess as it is. You should have killed him yourself."

Pollock pulled himself together, and went and picked up the head. He would hang it up by the lamp-hook in the middle of the ceiling of his room, and dig a grave for it at once. He was under the impression that he hung it up by the hair, but that must have been wrong, for when he returned for it, it was hanging by the neck upside down.

He buried it before sunset on the north side of the shed he occupied, so that he should not have to pass the grave after dark when he was returning from Perera's. He killed two

snakes before he went to sleep. In the darkest part of the night he awoke with a start, and heard a pattering sound and something scraping on the floor. He sat up noiselessly, and felt under his pillow for his revolver. A mumbling growl followed, and Pollock fired at the sound. There was a yelp, and something dark passed for a moment across the hazy blue of the doorway. "A dog!" said Pollock, lying down again.

In the early dawn he awoke again with a peculiar sense of unrest. The vague pain in his bones had returned. For some time he lay watching the red ants that were swarming over the ceiling, and then, as the light grew brighter, he looked over the edge of his hammock and saw something dark on the floor. He gave such a violent start that the hammock overset and flung him out.

He found himself lying, perhaps, a yard away from the head of the Porroh man. It had been disinterred by the dog, and the nose was grievously battered. Ants and flies swarmed over it. By an odd coincidence, it was still upside down, and with the same diabolical expression in the inverted eyes.

Pollock sat paralysed, and stared at the horror for some time. Then he got up and walked round it—giving it a wide berth—and out of the shed. The clear light of the sunrise, the living stir of vegetation before the breath of the dying land-breeze, and the empty grave with the marks of the dog's paws, lightened the weight upon his mind a little.

He told Perera of the business as though it was a jest—a jest to be told with white lips. "You should not have frighten de dog," said Perera, with poorly simulated hilarity.

The next two days, until the steamer came, were spent by Pollock in making a more effectual disposition of his possession. Overcoming his aversion to handling the thing, he went down to the river mouth and threw it into the sea-water, but by some miracle it escaped the crocodiles, and was cast up by the tide on the mud a little way up the river, to be found by an intelligent Arab half-breed, and offered for sale to Pollock and Perera as a curiosity, just on the edge of night. The native hung about in the brief twilight, making lower and lower offers, and at last, getting scared in some way by the evident dread these wise white men had for the thing, went off, and, passing Pollock's shed, threw his burden in there for Pollock to discover in the morning.

At this Pollock got into a kind of frenzy. He would burn the thing. He went out straightway into the dawn, and had constructed a big pyre of brushwood before the heat of the day. He was interrupted by the hooter of the little paddle steamer from Monrovia to Bathurst, which was coming through the gap in the bar. "Thank Heaven!" said Pollock, with infinite piety, when the meaning of the sound dawned upon him. With trembling hands he lit his pile of wood hastily,

threw the head upon it, and went away to pack his portmanteau and make his adieu to Perera.

That afternoon, with a sense of infinite relief, Pollock watched the flat swampy foreshore of Sulyma grow small in the distance. The gap in the long line of white surge became narrower and narrower. It seemed to be closing in and cutting him off from his trouble. The feeling of dread and worry began to slip from him bit by bit. At Sulyma belief in Porroh malignity and Porroh magic had been in the air, his sense of Porroh had been vast, pervading, threatening, dreadful. Now manifestly the domain of Porroh was only a little place, a little black band between the sea and the blue cloudy Mendi uplands.

"Good-bye, Porroh!" said Pollock. "Good-bye—certainly not *au revoir*."

The captain of the steamer came and leant over the rail beside him, and wished him good-evening, and spat at the froth of the wake in token of friendly ease.

"I picked up a rummy curio on the beach this go," said the captain. "It's a thing I never saw done this side of Indy before."

"What might that be?" said Pollock.

"Pickled 'ed," said the captain.

"*What!*" said Pollock.

"'Ed—smoked. 'Ed of one of these Porroh chaps, all ornamented with knife-cuts. Why! What's up? Nothing? I shouldn't have took you for a nervous chap. Green in the face. By gosh! you're a bad sailor. All right, eh? Lord, how funny you went! . . . Well, this 'ed I was telling you of is a bit rum in a way. I've got it, along with some snakes, in a jar of spirit in my cabin what I keeps for such curios, and I'm hanged if it don't float upsy down. Hullo!"

Pollock had given an incoherent cry, and had his hands in his hair. He ran towards the paddle-boxes with a half-formed idea of jumping into the sea, and then he realised his position and turned back towards the captain.

"Here!" said the captain. "Jack Philips, just keep him off me! Stand off! No nearer, mister! What's the matter with you? Are you mad?"

Pollock put his hand to his head. It was no good explaining.

"I believe I am pretty nearly mad at times," he said. "It's a pain I have here. Comes suddenly. You'll excuse me, I hope."

He was white and in a perspiration. He saw suddenly very clearly all the danger he ran of having his sanity doubted. He forced himself to restore the captain's confidence, by answering his sympathetic inquiries, noting his suggestions, even trying a spoonful of neat brandy in his cheek, and, that matter settled, asking a number of questions about the captain's private trade in curiosities. The captain described the head in detail. All the while Pollock was struggling to keep under a preposterous

persuasion that the ship was as transparent as glass, and that he could distinctly see the inverted face looking at him from the cabin beneath his feet.

Pollock had a worse time almost on the steamer than he had at Sulyma. All day he had to control himself in spite of his intense perception of the imminent presence of that horrible head that was overshadowing his mind. At night his old nightmare returned, until, with a violent effort, he would force himself awake, rigid with the horror of it, and with the ghost of a hoarse scream in his throat.

He left the actual head behind at Bathurst, where he changed ship for Teneriffe, but not his dreams nor the dull ache in his bones. At Teneriffe Pollock transferred to a Cape liner, but the head followed him. He gambled, he tried chess, he even read books, but he knew the danger of drink. Yet whenever a round black shadow, a round black object came into his range, there he looked for the head, and—saw it. He knew clearly enough that his imagination was growing traitor to him, and yet at times it seemed the ship he sailed in, his fellow-passengers, the sailors, the wide sea, was all part of a filmy phantasmagoria that hung, scarcely veiling it, between him and a horrible real world. Then the Porroh man, thrusting his diabolical face through that curtain, was the one real and undeniable thing. At that he would get up and touch things, taste something, gnaw something, burn his hand with a match, or run a needle into himself.

So, struggling grimly and silently with his excited imagination, Pollock reached England. He landed at Southampton, and went on straight from Waterloo to his banker's in Cornhill in a cab. There he transacted some business with the manager in a private room, and all the while the head hung like an ornament under the black marble mantel and dripped upon the fender. He could hear the drops fall, and see the red on the fender.

"A pretty fern," said the manager, following his eyes. "But it makes the fender rusty."

"Very," said Pollock; "a *very* pretty fern. And that reminds me. Can you recommend me a physician for mind troubles? I've got a little—what is it?—hallucination."

The head laughed savagely, wildly. Pollock was surprised the manager did not notice it. But the manager only stared at his face.

With the address of a doctor, Pollock presently emerged in Cornhill. There was no cab in sight, and so he went on down to the western end of the street, and essayed the crossing opposite the Mansion House. The crossing is hardly easy even for the expert Londoner; cabs, vans, carriages, mail-carts, omnibuses go by in one incessant stream; to any one fresh from the malarious solitudes of Sierra Leone it is a boiling, maddening confusion. But when an inverted head suddenly

comes bouncing, like an indiarubber ball, between your legs, leaving distinct smears of blood every time it touches the ground, you can scarcely hope to avoid an accident. Pollock lifted his feet convulsively to avoid it, and then kicked at the thing furiously. Then something hit him violently in the back, and a hot pain ran up his arm.

He had been hit by the pole of an omnibus, and three of the fingers of his left hand smashed by the hoof of one of the horses—the very fingers, as it happened, that he shot from the Porroh man. They pulled him out from between the horses' legs, and found the address of the physician in his crushed hand.

For a couple of days Pollock's sensations were full of the sweet, pungent smell of chloroform, of painful operations that caused him no pain, of lying still and being given food and drink. Then he had a slight fever, and was very thirsty, and his old nightmare came back. It was only when it returned that he noticed it had left him for a day.

"If my skull had been smashed instead of my fingers, it might have gone altogether," said Pollock, staring thoughtfully at the dark cushion that had taken on for the time the shape of the head.

Pollock at the first opportunity told the physician of his mind trouble. He knew clearly that he must go mad unless something should intervene to save him. He explained that he had witnessed a decapitation in Dahomey, and was haunted by one of the heads. Naturally, he did not care to state the actual facts. The physician looked grave.

Presently he spoke hesitatingly. "As a child, did you get very much religious training?"

"Very little," said Pollock.

A shade passed over the physician's face. "I don't know if you have heard of the miraculous cures—it may be, of course, they are not miraculous—at Lourdes."

"Faith-healing will hardly suit me, I am afraid," said Pollock, with his eye on the dark cushion.

The head distorted its scarred features in an abominable grimace. The physician went upon a new track. "It's all imagination," he said, speaking with sudden briskness. "A fair case for faith-healing, anyhow. Your nervous system has run down, you're in that twilight state of health when the bogles come easiest. The strong impression was too much for you. I must make you up a little mixture that will strengthen your nervous system—especially your brain. And you must take exercise."

"I'm no good for faith-healing," said Pollock.

"And therefore we must restore tone. Go in search of stimulating air—Scotland, Norway, the Alps——"

"Jericho, if you like," said Pollock—"where Naaman went."

However, so soon as his fingers would let him, Pollock made a gallant attempt to follow out the doctor's suggestion. It was

now November. He tried football, but to Pollock the game consisted in kicking a furious inverted head about a field. He was no good at the game. He kicked blindly, with a kind of horror, and when they put him back into goal, and the ball came swooping down upon him, he suddenly yelled and got out of its way. The discreditable stories that had driven him from England to wander in the tropics shut him off from any but men's society, and now his increasingly strange behaviour made even his man friends avoid him. The thing was no longer a thing of the eye merely, it gibbered at him, spoke to him. A horrible fear came upon him that presently, when he took hold of the apparition, it would no longer become some mere article of furniture, but would *feel* like a real dissevered head. Alone, he would curse at the thing, defy it, entreat it; once or twice, in spite of his grim self-control, he addressed it in the presence of others. He felt the growing suspicion in the eyes of the people that watched him—his landlady, the servant, his man.

One day early in December his cousin Arnold—his next of kin—came to see him and draw him out, and watch his sunken yellow face with narrow eager eyes. And it seemed to Pollock that the hat his cousin carried in his hand was no hat at all, but a Gorgon head that glared at him upside down, and fought with its eyes against his reason. However, he was still resolute to see the matter out. He got a bicycle, and, riding over the frosty road from Wandsworth to Kingston, found the thing rolling along at his side, and leaving a dark trail behind it. He set his teeth and rode faster. Then suddenly, as he came down the hill towards Richmond Park, the apparition rolled in front of him and under his wheel, so quickly that he had no time for thought, and, turning quickly to avoid it, was flung violently against a heap of stones and broke his left wrist.

The end came on Christmas morning. All night he had been in a fever, the bandages encircling his wrist like a band of fire, his dreams more vivid and terrible than ever. In the cold, colourless, uncertain light that came before the sunrise, he sat up in his bed, and saw the head upon the bracket in the place of the bronze jar that had stood there overnight.

"I know that is a bronze jar," he said, with a chill doubt at his heart. Presently the doubt was irresistible. He got out of bed slowly, shivering, and advanced to the jar with his hand raised. Surely he would see now his imagination had deceived him, recognise the distinctive sheen of bronze. At last, after an age of hesitation, his fingers came down on the patterned cheek of the head. He withdrew them spasmodically. The last stage was reached. His sense of touch had betrayed him.

Trembling, stumbling against the bed, kicking against his shoes with his bare feet, a dark confusion eddying round him, he groped his way to the dressing-table, took his razor from the drawer, and sat down on the bed with this in his hand.

In the looking-glass he saw his own face, colourless, haggard, full of the ultimate bitterness of despair.

He beheld in swift succession the incidents in the brief tale of his experience. His wretched home, his still more wretched schooldays, the years of vicious life he had led since then, one act of selfish dishonour leading to another ; it was all clear and pitiless now, all its squalid folly, in the cold light of the dawn. He came to the hut, to the fight with the Porroh man, to the retreat down the river to Sulyma, to the Mendi assassin and his red parcel, to his frantic endeavours to destroy the head, to the growth of his hallucination. It was a hallucination ! He *knew* it was. A hallucination merely. For a moment he snatched at hope. He looked away from the glass, and on the bracket the inverted head grinned and grimaced at him. . . . With the stiff fingers of his bandaged hand he felt at his neck for the throb of his arteries. The morning was very cold, the steel blade felt like ice.

STORY TWENTY-SIX

THE RED ROOM

"I CAN assure you," said I, "that it will take a very tangible ghost to frighten me." And I stood up before the fire with my glass in my hand.

"It is your own choosing," said the man with the withered arm, and glanced at me askance.

"Eight-and-twenty years," said I, "I have lived, and never a ghost have I seen as yet."

The old woman sat staring hard into the fire, her pale eyes wide open. "Ay," she broke in; "and eight-and-twenty years you have lived and never seen the likes of this house, I reckon. There's a many things to see, when one's still but eight-and-twenty." She swayed her head slowly from side to side. "A many things to see and sorrow for."

I half suspected the old people were trying to enhance the spiritual terrors of their house by their droning insistence. I put down my empty glass on the table and looked about the room, and caught a glimpse of myself, abbreviated and broadened to an impossible sturdiness, in the queer old mirror at the end of the room. "Well," I said, "if I see anything to-night, I shall be so much the wiser. For I come to the business with an open mind."

"It's your own choosing," said the man with the withered arm once more.

I heard the sound of a stick and a shambling step on the flags in the passage outside, and the door creaked on its hinges as a second old man entered, more bent, more wrinkled, more aged even than the first. He supported himself by a single crutch, his eyes were covered by a shade, and his lower lip, half averted, hung pale and pink from his decaying yellow teeth. He made straight for an armchair on the opposite side of the table, sat down clumsily, and began to cough. The man with the withered arm gave this new-comer a short glance of positive dislike; the old woman took no notice of his arrival, but remained with her eyes fixed steadily on the fire.

"I said—it's your own choosing," said the man with the withered arm, when the coughing had ceased for a while.

"It's my own choosing," I answered.

The man with the shade became aware of my presence for the first time, and threw his head back for a moment and sideways, to see me. I caught a momentary glimpse of his eyes, small and bright and inflamed. Then he began to cough and splutter again.

"Why don't you drink?" said the man with the withered arm, pushing the beer towards him. The man with the shade poured out a glassful with a shaky arm that splashed half as

much again on the deal table. A monstrous shadow of him crouched upon the wall and mocked his action as he poured and drank. I must confess I had scarce expected these grotesque custodians. There is to my mind something inhuman in senility, something crouching and atavistic; the human qualities seem to drop from old people insensibly day by day. The three of them made me feel uncomfortable, with their gaunt silences, their bent carriage, their evident unfriendliness to me and to one another.

"If," said I, "you will show me to this haunted room of yours, I will make myself comfortable there."

The old man with the cough jerked his head back so suddenly that it startled me, and shot another glance of his red eyes at me from under the shade; but no one answered me. I waited a minute, glancing from one to the other.

"If," I said a little louder, "if you will show me to this haunted room of yours, I will relieve you from the task of entertaining me."

"There's a candle on the slab outside the door," said the man with the withered arm, looking at my feet as he addressed me. "But if you go to the red room to-night——"

("This night of all nights!" said the old woman.)

"You go alone."

"Very well," I answered. "And which way do I go?"

"You go along the passage for a bit," said he, "until you come to a door, and through that is a spiral staircase, and half-way up that is a landing and another door covered with baize. Go through that and down the long corridor to the end, and the red room is on your left up the steps."

"Have I got that right?" I said, and repeated his directions. He corrected me in one particular.

"And are you really going?" said the man with the shade, looking at me again for the third time, with that queer, unnatural tilting of the face.

("This night of all nights!" said the old woman.)

"It is what I came for," I said, and moved towards the door. As I did so, the old man with the shade rose and staggered round the table, so as to be closer to the others and to the fire. At the door I turned and looked at them, and saw they were all close together, dark against the firelight, staring at me over their shoulders, with an intent expression on their ancient faces.

"Good-night," I said, setting the door open.

"It's your own choosing," said the man with the withered arm.

I left the door wide open until the candle was well alight, and then I shut them in and walked down the chilly, echoing passage.

I must confess that the oddness of these three old pensioners in whose charge her ladyship had left the castle, and the deep-

toned, old-fashioned furniture of the housekeeper's room in which they foregathered, affected me in spite of my efforts to keep myself at a matter-of-fact phase. They seemed to belong to another age, an older age, an age when things spiritual were different from this of ours, less certain; an age when omens and witches were credible, and ghosts beyond denying. Their very existence was spectral; the cut of their clothing, fashions born in dead brains. The ornaments and conveniences of the room about them were ghostly—the thoughts of vanished men, which still haunted rather than participated in the world of to-day. But with an effort I sent such thoughts to the right-about. The long, draughty subterranean passage was chilly and dusty, and my candle flared and made the shadows cower and quiver. The echoes rang up and down the spiral staircase, and a shadow came sweeping up after me, and one fled before me into the darkness overhead. I came to the landing and stopped there for a moment, listening to a rustling that I fancied I heard; then, satisfied of the absolute silence, I pushed open the baize-covered door and stood in the corridor.

The effect was scarcely what I expected, for the moonlight, coming in by the great window on the grand staircase, picked out everything in vivid black shadow or silvery illumination. Everything was in its place: the house might have been deserted on the yesterday instead of eighteen months ago. There were candles in the sockets of the sconces, and whatever dust had gathered on the carpets or upon the polished flooring was distributed so evenly as to be invisible in the moonlight. I was about to advance, and stopped abruptly. A bronze group stood upon the landing, hidden from me by the corner of the wall, but its shadow fell with marvellous distinctness upon the white panelling, and gave me the impression of some one crouching to waylay me. I stood rigid for half a minute perhaps. Then, with my hand in the pocket that held my revolver, I advanced, only to discover a Ganymede and Eagle glistening in the moonlight. That incident for a time restored my nerve, and a porcelain Chinaman on a buhl table, whose head rocked silently as I passed him, scarcely startled me.

The door to the red room and the steps up to it were in a shadowy corner. I moved my candle from side to side, in order to see clearly the nature of the recess in which I stood before opening the door. Here it was, thought I, that my predecessor was found, and the memory of that story gave me a sudden twinge of apprehension. I glanced over my shoulder at the Ganymede in the moonlight, and opened the door of the red room rather hastily, with my face half turned to the pallid silence of the landing.

I entered, closed the door behind me at once, turned the key I found in the lock within, and stood with the candle held

aloft, surveying the scene of my vigil, the great red room of Lorraine Castle, in which the young duke had died. Or, rather, in which he had begun his dying, for he had opened the door and fallen headlong down the steps I had just ascended. That had been the end of his vigil, of his gallant attempt to conquer the ghostly tradition of the place; and never, I thought, had apoplexy better served the ends of superstition. And there were other and older stories that clung to the room, back to the half-credible beginning of it all, the tale of a timid wife and the tragic end that came to her husband's jest of frightening her. And looking around that large shadowy room, with its shadowy window bays, its recesses and alcoves, one could well understand the legends that had sprouted in its black corners, its germinating darkness. My candle was a little tongue of flame in its vastness, that failed to pierce the opposite end of the room, and left an ocean of mystery and suggestion beyond its island of light.

I resolved to make a systematic examination of the place at once, and dispel the fanciful suggestions of its obscurity before they obtained a hold upon me. After satisfying myself of the fastening of the door, I began to walk about the room, peering round each article of furniture, tucking up the valances of the bed, and opening its curtains wide. I pulled up the blinds and examined the fastenings of the several windows before closing the shutters, leant forward and looked up the blackness of the wide chimney, and tapped the dark oak panelling for any secret opening. There were two big mirrors in the room, each with a pair of sconces bearing candles, and on the mantelshelf, too, were more candles in china candlesticks. All these I lit one after the other. The fire was laid—an unexpected consideration from the old housekeeper—and I lit it, to keep down any disposition to shiver, and when it was burning well, I stood round with my back to it and regarded the room again. I had pulled up a chintz-covered arm-chair and a table, to form a kind of barricade before me, and on this lay my revolver ready to hand. My precise examination had done me good, but I still found the remoter darkness of the place, and its perfect stillness, too stimulating for the imagination. The echoing of the stir and crackling of the fire was no sort of comfort to me. The shadow in the alcove, at the end in particular, had that undefinable quality of a presence, that odd suggestion of a lurking living thing, that comes so easily in silence and solitude. At last, to reassure myself, I walked with a candle into it, and satisfied myself that there was nothing tangible there. I stood that candle upon the floor of the alcove, and left it in that position.

By this time I was in a state of considerable nervous tension, although to my reason there was no adequate cause for the condition. My mind, however, was perfectly clear. I postulated quite unreservedly that nothing supernatural could

happen, and to pass the time I began to string some rhymes together, Ingoldsby fashion, of the original legend of the place. A few I spoke aloud, but the echoes were not pleasant. For the same reason I also abandoned, after a time, a conversation with myself upon the impossibility of ghosts and haunting. My mind reverted to the three old and distorted people downstairs, and I tried to keep it upon that topic. The sombre reds and blacks of the room troubled me; even with seven candles the place was merely dim. The one in the alcove flared in a draught, and the fire-flickering kept the shadows and penumbra perpetually shifting and stirring. Casting about for a remedy, I recalled the candles I had seen in the passage, and, with a slight effort, walked out into the moonlight, carrying a candle and leaving the door open, and presently returned with as many as ten. These I put in various knick-knacks of china with which the room was sparsely adorned, lit and placed where the shadows had lain deepest, some on the floor, some in the window recesses, until at last my seventeen candles were so arranged that not an inch of the room but had the direct light of at least one of them. It occurred to me that when the ghost came, I could warn him not to trip over them. The room was now quite brightly illuminated. There was something very cheery and reassuring in these little streaming flames, and snuffing them gave me an occupation, and afforded a reassuring sense of the passage of time.

Even with that, however, the brooding expectation of the vigil weighed heavily upon me. It was after midnight that the candle in the alcove suddenly went out, and the black shadow sprang back to its place. I did not see the candle go out; I simply turned and saw that the darkness was there, as one might start and see the unexpected presence of a stranger. "By Jove!" said I aloud; "that draught's a strong one!" and, taking the matches from the table, I walked across the room in a leisurely manner to relight the corner again. My first match would not strike, and as I succeeded with the second, something seemed to blink on the wall before me. I turned my head involuntarily, and saw that the two candles on the little table by the fireplace were extinguished. I rose at once to my feet.

"Odd!" I said. "Did I do that myself in a flash of absent-mindedness?"

I walked back, relit one, and as I did so, I saw the candle in the right sconce of one of the mirrors wink and go right out, and almost immediately its companion followed it. There was no mistake about it. The flame vanished, as if the wicks had been suddenly nipped between a finger and a thumb, leaving the wick neither glowing nor smoking, but black. While I stood gaping, the candle at the foot of the bed went out, and the shadows seemed to take another step towards me.

"This won't do!" said I, and first one and then another candle on the mantelshef followed.

"What's up?" I cried, with a queer high note getting into my voice somehow. At that the candle on the wardrobe went out, and the one I had relit in the alcove followed.

"Steady on!" I said. "These candles are wanted," speaking with a half-hysterical facetiousness, and scratching away at a match the while for the mantel candlesticks. My hands trembled so much that twice I missed the rough paper of the matchbox. As the mantel emerged from darkness again, two candles in the remoter end of the window were eclipsed. But with the same match I also relit the larger mirror candles, and those on the floor near the doorway, so that for the moment I seemed to gain on the extinctions. But then in a volley there vanished four lights at once in different corners of the room, and I struck another match in quivering haste, and stood hesitating whither to take it.

As I stood undecided, an invisible hand seemed to sweep out the two candles on the table. With a cry of terror, I dashed at the alcove, then into the corner, and then into the window, relighting three, as two more vanished by the fireplace; then, perceiving a better way, I dropped the matches on the iron-bound deed-box in the corner, and caught up the bedroom candlestick. With this I avoided the delay of striking matches; but for all that the steady process of extinction went on, and the shadows I feared and fought against returned, and crept in upon me, first a step gained on this side of me and then on that. It was like a ragged storm-cloud sweeping out the stars. Now and then one returned for a minute, and was lost again. I was now almost frantic with the horror of coming darkness, and my self-possession deserted me. I leaped panting and dishevelled from candle to candle, in a vain struggle against that remorseless advance.

I bruised myself on the thigh against the table, I sent a chair headlong, I stumbled and fell and whisked the cloth from the table in my fall. My candle rolled away from me, and I snatched another as I rose. Abruptly this was blown out, as I swung it off the table, by the wind of my sudden movement, and immediately the two remaining candles followed. But there was light still in the room, a red light that staved off the shadows from me. The fire! Of course, I could thrust my candle between the bars and relight it!

I turned to where the flames were dancing between the glowing coals, and splashing red reflections upon the furniture, made two steps towards the grate, and incontinently the flames dwindled and vanished, the glow vanished, the reflections rushed together and vanished, and as I thrust the candle between the bars, darkness closed upon me like the shutting of an eye, wrapped about me in a stifling embrace, sealed my vision, and crushed the last vestiges of reason from my brain.

The candle fell from my hand. I flung out my arms in a vain effort to thrust that ponderous blackness away from me, and, lifting up my voice, screamed with all my might—once, twice, thrice. Then I think I must have staggered to my feet. I know I thought suddenly of the moonlit corridor, and, with my head bowed and my arms over my face, made a run for the door.

But I had forgotten the exact position of the door, and struck myself heavily against the corner of the bed. I staggered back, turned, and was either struck or struck myself against some other bulky furniture. I have a vague memory of battering myself thus, to and fro in the darkness, of a cramped struggle, and of my own wild crying as I darted to and fro, of a heavy blow at last upon my forehead, a horrible sensation of falling that lasted an age, of my last frantic effort to keep my footing, and then I remember no more.

I opened my eyes in daylight. My head was roughly bandaged, and the man with the withered arm was watching my face. I looked about me, trying to remember what had happened, and for a space I could not recollect. I turned to the corner, and saw the old woman, no longer abstracted, pouring out some drops of medicine from a little blue phial into a glass. "Where am I?" I asked. "I seem to remember you, and yet I cannot remember who you are."

They told me then, and I heard of the haunted Red Room as one who hears a tale. "We found you at dawn," said he, "and there was blood on your forehead and lips."

It was very slowly I recovered my memory of my experience. "You believe now," said the old man, "that the room is haunted?" He spoke no longer as one who greets an intruder, but as one who grieves for a broken friend.

"Yes," said I; "the room is haunted."

"And you have seen it. And we, who have lived here all our lives, have never set eyes upon it. Because we have never dared. . . . Tell us, is it truly the old earl who——"

"No," said I; "it is not."

"I told you so," said the old lady, with the glass in her hand. "It is his poor young countess who was frightened——"

"It is not," I said. "There is neither ghost of earl nor ghost of countess in that room, there is no ghost there at all; but worse, far worse——"

"Well?" they said.

"The worst of all the things that haunt poor mortal man," said I; "and that is, in all its nakedness—*Fear*! Fear that will not have light nor sound, that will not bear with reason, that deafens and darkens and overwhelms. It followed me through the corridor, it fought against me in the room——"

I stopped abruptly. There was an interval of silence. My hand went up to my bandages.

Then the man with the shade sighed and spoke. "That is it," said he. "I knew that was it. A Power of Darkness. To put such a curse upon a woman! It lurks there always. You can feel it even in the daytime, even of a bright summer's day, in the hangings, in the curtains, keeping behind you however you face about. In the dusk it creeps along the corridor and follows you, so that you dare not turn. There is Fear in that room of hers—black Fear, and there will be—so long as this house of sin endures."

STORY TWENTY-SEVEN

THE CONE

THE night was hot and overcast, the sky red-rimmed with the lingering sunset of mid-summer. They sat at the open window, trying to fancy the air was fresher there. The trees and shrubs of the garden stood stiff and dark; beyond in the roadway a gas-lamp burnt, bright orange against the hazy blue of the evening. Farther were the three lights of the railway signal against the lowering sky. The man and woman spoke to one another in low tones.

"He does not suspect?" said the man, a little nervously.

"Not he," she said peevishly, as though that too irritated her. "He thinks of nothing but the works and the prices of fuel. He has no imagination, no poetry."

"None of these men of iron have," he said sententiously.

"They have no hearts."

"He has not," she said. She turned her discontented face towards the window. The distant sound of a roaring and rushing drew nearer and grew in volume; the house quivered; one heard the metallic rattle of the tender. As the train passed, there was a glare of light above the cutting and a driving tumult of smoke; one, two, three, four, five, six, seven, eight black oblongs—eight trucks—passed across the dim grey of the embankment, and were suddenly extinguished one by one in the throat of the tunnel, which, with the last, seemed to swallow down train, smoke, and sound in one abrupt gulp.

"This country was all fresh and beautiful once," he said; "and now—it is Gehenna. Down that way—nothing but pot-banks and chimneys belching fire and dust into the face of heaven. . . . But what does it matter? An end comes, an end to all this cruelty. . . . *To-morrow*." He spoke the last word in a whisper.

"*To-morrow*," she said, speaking in a whisper too, and still staring out of the window.

"Dear!" he said, putting his hand on hers.

She turned with a start, and their eyes searched one another's. Hers softened to his gaze. "My dear one!" she said, and then: "It seems so strange—that you should have come into my life like this—to open——" She paused.

"To open?" he said.

"All this wonderful world"—she hesitated, and spoke still more softly—"this world of *love* to me."

Then suddenly the door clicked and closed. They turned their heads, and he started violently back. In the shadow of the room stood a great shadowy figure—silent. They saw the face dimly in the half-light, with unexpressive dark patches under the penthouse brows. Every muscle in Raut's body

suddenly became tense. When could the door have opened ? What had he heard ? Had he heard all ? What had he seen ? A tumult of questions.

The new-comer's voice came at last, after a pause that seemed interminable. "Well ?" he said.

"I was afraid I had missed you, Horrocks," said the man at the window, gripping the window-ledge with his hand. His voice was unsteady.

The clumsy figure of Horrocks came forward out of the shadow. He made no answer to Raut's remark. For a moment he stood above them.

The woman's heart was cold within her. "I told Mr. Raut it was just possible you might come back," she said, in a voice that never quivered.

Horrocks, still silent, sat down abruptly in the chair by her little work-table. His big hands were clenched ; one saw now the fire of his eyes under the shadow of his brows. He was trying to get his breath. His eyes went from the woman he had trusted to the friend he had trusted, and then back to the woman.

By this time and for the moment all three half understood one another. Yet none dared say a word to ease the pent-up things that choked them.

It was the husband's voice that broke the silence at last.

"You wanted to see me ?" he said to Raut.

Raut started as he spoke. "I came to see you," he said, resolved to lie to the last.

"Yes," said Horrocks.

"You promised," said Raut, "to show me some fine effects of moonlight and smoke."

"I promised to show you some fine effects of moonlight and smoke," repeated Horrocks in a colourless voice.

"And I thought I might catch you to-night before you went down to the works," proceeded Raut, "and come with you."

There was another pause. Did the man mean to take the thing coolly ? Did he after all know ? How long had he been in the room ? Yet even at the moment when they heard the door, their attitudes . . . Horrocks glanced at the profile of the woman, shadowy pallid in the half-light. Then he glanced at Raut, and seemed to recover himself suddenly. "Of course," he said, "I promised to show you the works under their proper dramatic conditions. It's odd how I could have forgotten."

"If I am troubling you"—began Raut.

Horrocks started again. A new light had suddenly come into the sultry gloom of his eyes. "Not in the least," he said.

"Have you been telling Mr. Raut of all these contrasts of flame and shadow you think so splendid ?" said the woman, turning now to her husband, for the first time, her confidence creeping back again, her voice just one half-note too high.

"That dreadful theory of yours that machinery is beautiful, and everything else in the world ugly. I thought he would not spare you, Mr. Raut. It's his great theory, his one discovery in art."

"I am slow to make discoveries," said Horrocks grimly, damping her suddenly. "But what I discover . . ." He stopped.

"Well ?" she said.

"Nothing" ; and suddenly he rose to his feet.

"I promised to show you the works," he said to Raut, and put his big, clumsy hand on his friend's shoulder. "And you are ready to go ?"

"Quite," said Raut, and stood up also.

There was another pause. Each of them peered through the indistinctness of the dusk at the other two. Horrocks's hand still rested on Raut's shoulder. Raut half fancied still that the incident was trivial after all. But Mrs. Horrocks knew her husband better, knew that grim quiet in his voice, and the confusion in her mind took a vague shape of physical evil. "Very well," said Horrocks, and, dropping his hand, turned towards the door.

"My hat ?" Raut looked round in the half-light.

"That's my work-basket," said Mrs. Horrocks with a gust of hysterical laughter. Their hands came together on the back of the chair. "Here it is !" he said. She had an impulse to warn him in an undertone, but she could not frame a word. "Don't go !" and "Beware of him !" struggled in her mind, and the swift moment passed.

"Got it ?" said Horrocks, standing with the door half open.

Raut stepped towards him. "Better say good-bye to Mrs. Horrocks," said the ironmaster, even more grimly quiet in his tone than before.

Raut started and turned. "Good-evening, Mrs. Horrocks," he said, and their hands touched.

Horrocks held the door open with a ceremonial politeness unusual in him towards men. Raut went out, and then, after a wordless look at her, her husband followed. She stood motionless while Raut's light footfall and her husband's heavy tread, like bass and treble, passed down the passage together. The front door slammed heavily. She went to the window, moving slowly, and stood watching—leaning forward. The two men appeared for a moment at the gateway in the road, passed under the street lamp, and were hidden by the black masses of the shrubbery. The lamplight fell for a moment on their faces, showing only unmeaning pale patches, telling nothing of what she still feared, and doubted, and craved vainly to know. Then she sank down into a crouching attitude in the big armchair, her eyes wide open and staring out at the red lights from the furnaces that flickered in the sky. An hour after she was still there, her attitude scarcely changed.

The oppressive stillness of the evening weighed heavily upon Raut. They went side by side down the road in silence, and in silence turned into the cinder-made by-way that presently opened out the prospect of the valley.

A blue haze, half-dust, half-mist, touched the long valley with mystery. Beyond were Hanley and Etruria, grey and black masses, outlined thinly by the rare golden dots of the street-lamps, and here and there a gaslit window, or the yellow glare of some late-working factory or crowded public-house. Out of the masses, clear and slender against the evening sky, rose a multitude of tall chimneys, many of them reeking, a few smokeless during a season of "play." Here and there a pallid patch and ghostly stunted beehive shapes showed the position of a pot-bank, or a wheel, black and sharp against the hot lower sky, marked some colliery where they raise the iridescent coal of the place. Nearer at hand was the broad stretch of railway, and half-invisible trains shunted—a steady puffing and rumbling, with every now and then a ringing concussion and a series of impacts, and a passage of intermittent puffs of white steam across the farther view. And to the left, between the railway and the dark masses of the low hill beyond, dominating the whole view, colossal, inky-black, and crowned with smoke and fitful flames, stood the great cylinders of the Jeddah Company Blast Furnaces, the central edifices of the big iron-works of which Horrocks was the manager. They stood heavy and threatening, full of an incessant turmoil of flames and seething molten iron, and about the feet of them rattled the rolling-mills, and the steam-hammer beat heavily and splashed the white iron sparks hither and thither. Even as they looked, a truckful of fuel was shot into one of the giants, and the red flames gleamed out, and a confusion of smoke and black dust came boiling upwards towards the sky.

"Certainly you get some fine effects of colour with your furnaces," said Raut, breaking a silence that had become apprehensive.

Horrocks grunted. He stood with his hands in his pockets, frowning down at the dim steaming railway and the busy iron-works beyond, frowning as if he were thinking out some knotty problem.

Raut glanced at him and away again. "At present your moonlight effect is hardly ripe," he continued, looking upward; "the moon is still smothered by the vestiges of daylight."

Horrocks stared at him with the expression of a man who has suddenly awakened. "Vestiges of daylight? . . . Of course, of course." He too looked up at the moon, pale still in the midsummer sky. "Come along," he said suddenly, and, gripping Raut's arm in his hand, made a move towards the path that dropped from them to the railway.

Raut hung back. Their eyes met and saw a thousand things in a moment that their lips came near to say.

Horrocks's hand tightened and then relaxed. He let go, and before Raut was aware of it, they were arm in arm, and walking, one unwillingly enough, down the path.

"You see the fine effect of the railway signals towards Burslem," said Horrocks, suddenly breaking into loquacity, striding fast and tightening the grip of his elbow the while. "Little green lights and red and white lights, all against the haze. You have an eye for effect, Raut. It's a fine effect. And look at those furnaces of mine, how they rise upon us as we come down the hill. That to the right is my pet—seventy feet of him. I packed him myself, and he's boiled away cheerfully with iron in his guts for five long years. I've a particular fancy for *him*. That line of red there—a lovely bit of warm orange you'd call it, Raut—that's the puddlers' furnaces, and there, in the hot light, three black figures—did you see the white splash of the steam-hammer then?—that's the rolling-mills. Come along! Clang, clatter, how it goes rattling across the floor! Sheet tin, Raut—amazing stuff. Glass mirrors are not in it when that stuff comes from the mill. And, squelch!—there goes the hammer again. Come along!"

He had to stop talking to catch at his breath. His arm twisted into Raut's with benumbing tightness. He had come striding down the black path towards the railway as though he was possessed. Raut had not spoken a word, had simply hung back against Horrocks' pull with all his strength.

"I say," he said now, laughing nervously, but with an under-note of snarl in his voice, "why on earth are you nipping my arm off, Horrocks, and dragging me along like this?"

At length Horrocks released him. His manner changed again. "Nipping your arm off?" he said. "Sorry. But it's you taught me the trick of walking in that friendly way."

"You haven't learnt the refinements of it yet then," said Raut, laughing artificially again. "By Jove! I'm black and blue." Horrocks offered no apology. They stood now near the bottom of the hill, close to the fence that bordered the railway. The ironworks had grown larger and spread out with their approach. They looked up to the blast furnaces now instead of down; the farther view of Etruria and Hanley had dropped out of sight with their descent. Before them, by the stile, rose a notice-board, bearing, still dimly visible, the words, "BEWARE OF THE TRAINS," half hidden by splashes of coaly mud.

"Fine effects," said Horrocks, waving his arm. "Here comes a train. The puffs of smoke, the orange glare, the round eye of light in front of it, the melodious rattle. Fine effects! But these furnaces of mine used to be finer, before we shoved cones in their throats, and saved the gas."

"How?" said Raut. "Cones?"

"Cones, my man, cones. I'll show you one nearer. The flames used to flare out of the open throats, great—what is

it?—pillars of cloud by day, red and black smoke, and pillars of fire by night. Now we run it off in pipes, and burn it to heat the blast, and the top is shut by a cone. You'll be interested in that cone."

"But every now and then," said Raut, "you get a burst of fire and smoke up there."

"The cone's not fixed, it's hung by a chain from a lever, and balanced by an equipoise. You shall see it nearer. Else, of course, there'd be no way of getting fuel into the thing. Every now and then the cone dips, and out comes the flare."

"I see," said Raut. He looked over his shoulder. "The moon gets brighter," he said.

"Come along," said Horrocks abruptly, gripping his shoulder again, and moving him suddenly towards the railway crossing. And then came one of those swift incidents, vivid, but so rapid that they leave one doubtful and reeling. Half-way across, Horrocks's hand suddenly clenched upon him like a vice, and swung him backward and through a half-turn, so that he looked up the line. And there a chain of lamp-lit carriage-windows telescoped swiftly as it came towards them, and the red and yellow lights of an engine grew larger and larger, rushing down upon them. As he grasped what this meant, he turned his face to Horrocks, and pushed with all his strength against the arm that held him back between the rails. The struggle did not last a moment. Just as certain as it was that Horrocks held him there, so certain was it that he had been violently lugged out of danger.

"Out of the way," said Horrocks, with a gasp, as the train came rattling by, and they stood panting by the gate into the ironworks.

"I did not see it coming," said Raut, still, even in spite of his own apprehensions, trying to keep up an appearance of ordinary intercourse.

Horrocks answered with a grunt. "The cone," he said, and then, as one who recovers himself, "I thought you did not hear."

"I didn't," said Raut.

"I wouldn't have had you run over then for the world," said Horrocks.

"For a moment I lost my nerve," said Raut.

Horrocks stood for half a minute, then turned abruptly towards the ironworks again. "See how fine these great mounds of mine, these clinker-heaps, look in the night! That truck yonder, up above there! Up it goes, and out-tilts the slag. See the palpitating red stuff go sliding down the slope! As we get nearer, the heap rises up and cuts the blast furnaces. See the quiver up above the big one. Not that way! This way, between the heaps. That goes to the puddling furnaces, but I want to show you the canal first." He came and took Raut by the elbow, and so they went along side by side. Raut

answered Horrocks vaguely. What, he asked himself, had really happened on the line? Was he deluding himself with his own fancies, or had Horrocks actually held him back in the way of the train? Had he just been within an ace of being murdered?

Suppose this slouching, scowling monster *did* know anything? For a minute or two then Raut was really afraid for his life, but the mood passed as he reasoned with himself. After all, Horrocks might have heard nothing. At any rate, he pulled him out of the way in time. His odd manner might be due to the mere vague jealousy he had shown once before. He was talking now of the ash-heaps and the canal. "Eigh?" said Horrocks.

"What?" said Raut. "Rather! The haze in the moon light. Fine!"

"Our canal," said Horrocks, stopping suddenly. "Our canal by moonlight and firelight is an immense effect. You've never seen it? Fancy that! You've spent too many of your evenings philandering up in Newcastle there. I tell you, for real florid effects—— But you shall see. Boiling water . . ."

As they came out of the labyrinth of clinker-heaps and mounds of coal and ore, the noises of the rolling-mill sprang upon them suddenly, loud, near, and distinct. Three shadowy workmen went by and touched their caps to Horrocks. Their faces were vague in the darkness. Raut felt a futile impulse to address them, and before he could frame his words, they passed into the shadows. Horrocks pointed to the canal close before them now: a weird-looking place it seemed, in the blood-red reflections of the furnaces. The hot water that cooled the tuyères came into it, some fifty yards up—a tumultuous, almost boiling affluent, and the steam rose up from the water in silent white wisps and streaks, wrapping damply about them, an incessant succession of ghosts coming up from the black and red eddies, a white uprising that made the head swim. The shining black tower of the larger blast-furnace rose overhead out of the mist, and its tumultuous riot filled their ears. Raut kept away from the edge of the water, and watched Horrocks.

"Here it is red," said Horrocks, "blood-red vapour as red and hot as sin; but yonder there, where the moonlight falls on it, and it drives across the clinker-heaps, it is as white as death."

Raut turned his head for a moment, and then came back hastily to his watch on Horrocks. "Come along to the rolling-mills," said Horrocks. The threatening hold was not so evident that time, and Raut felt a little reassured. But all the same, what on earth did Horrocks mean about "white as death" and "red as sin"? Coincidence, perhaps?

They went and stood behind the puddlers for a little while, and then through the rolling-mills, where amidst an incessant din the deliberate steam-hammer beat the juice out of the

succulent iron, and black, half-naked Titans rushed the plastic bars, like hot sealing-wax, between the wheels. "Come on," said Horrocks in Raut's ear, and they went and peeped through the little glass hole behind the tuyères, and saw the tumbled fire writhing in the pit of the blast-furnace. It left one eye blinded for a while. Then, with green and blue patches dancing across the dark, they went to the lift by which the trucks of ore and fuel and lime were raised to the top of the big cylinder.

And out upon the narrow rail that overhung the furnace, Raut's doubts came upon him again. Was it wise to be here? If Horrocks did know—everything! Do what he would, he could not resist a violent trembling. Right under foot was a sheer depth of seventy feet. It was a dangerous place. They pushed by a truck of fuel to get to the railing that crowned the place. The reek of the furnace, a sulphurous vapour streaked with pungent bitterness, seemed to make the distant hillside of Hanley quiver. The moon was riding out now from among a drift of clouds, half-way up the sky above the undulating wooded outlines of Newcastle. The steaming canal ran away from below them under an indistinct bridge, and vanished into the dim haze of the flat fields towards Burslem.

"That's the cone I've been telling you of," shouted Horrocks; "and, below that, sixty feet of fire and molten metal, with the air of the blast frothing through it like gas in soda-water."

Raut gripped the hand-rail tightly, and stared down at the cone. The heat was intense. The boiling of the iron and the tumult of the blast made a thunderous accompaniment to Horrocks's voice. But the thing had to be gone through now. Perhaps, after all . . .

"In the middle," bawled Horrocks, "temperature near a thousand degrees. If you were dropped into it . . . flash into flame like a pinch of gunpowder in a candle. Put your hand out and feel the heat of his breath. Why, even up here I've seen the rain-water boiling off the trucks. And that cone there. It's a damned sight too hot for roasting cakes. The top side of it's three hundred degrees."

"Three hundred degrees!" said Raut.

"Three hundred centigrade, mind!" said Horrocks. "It will boil the blood out of you in no time."

"Eigh?" said Raut, and turned.

"Boil the blood out of you in . . . No, you don't!"

"Let me go!" screamed Raut. "Let go my arm!"

With one hand he clutched at the hand-rail, then with both. For a moment the two men stood swaying. Then suddenly, with a violent jerk, Horrocks had twisted him from his hold. He clutched at Horrocks and missed, his foot went back into empty air; in mid-air he twisted himself, and then cheek and shoulder and knee struck the hot cone together.

He clutched the chain by which the cone hung, and the thing sank an infinitesimal amount as he struck it. A circle of glowing red appeared about him, and a tongue of flame, released from the chaos within, flickered up toward him. An intense pain assailed him at the knees, and he could smell the singeing of his hands. He raised himself to his feet, and tried to climb up the chain, and then something struck his head. Black and shining with the moonlight, the throat of the furnace rose about him.

Horrocks, he saw, stood above him by one of the trucks of fuel on the rail. The gesticulating figure was bright and white in the moonlight, and shouting, "Fizz! you fool! Fizz! you hunter of women! You hot-blooded hound! Boil! boil! boil!"

Suddenly he caught up a handful of coal out of the truck, and flung it deliberately, lump after lump, at Raut.

"Horrocks!" cried Raut. "Horrocks!"

He clung crying to the chain, pulling himself up from the burning of the cone. Each missile Horrocks flung hit him. His clothes charred and glowed, and as he struggled the cone dropped, and a rush of hot suffocating gas whooped out and burned round him in a swift breath of flame.

His human likeness departed from him. When the momentary red had passed, Horrocks saw a charred, blackened figure, its head streaked with blood, still clutching and fumbling with the chain, and writhing in agony—a cindery animal, an inhuman, monstrous creature that began a sobbing intermittent shriek.

Abruptly, at the sight, the ironmaster's anger passed. A deadly sickness came upon him. The heavy odour of burning flesh came drifting up to his nostrils. His sanity returned to him.

"God have mercy upon me!" he cried. "O God! what have I done?"

He knew the thing below him, save that it still moved and felt, was already a dead man—that the blood of the poor wretch must be boiling in his veins. An intense realisation of that agony came to his mind, and overcame every other feeling. For a moment he stood irresolute, and then, turning to the truck, he hastily tilted its contents upon the struggling thing that had once been a man. The mass fell with a thud, and went radiating over the cone. With the thud the shriek ended, and a boiling confusion of smoke, dust, and flame came rushing up towards him. As it passed, he saw the cone clear again.

Then he staggered back, and stood trembling, clinging to the rail with both hands. His lips moved, but no words came to them.

Down below was the sound of voices and running steps. The clangour of rolling in the shed ceased abruptly.

STORY TWENTY-EIGHT

THE PURPLE PILEUS

MR. COOMBES was sick of life. He walked away from his unhappy home, sick not only of his own existence, but of everybody else's, turned aside down Gaswork Lane to avoid the town, crossed the wooden bridge that goes over the canal to Starling's Cottages, and was presently alone in the damp pinewoods and out of sight and sound of human habitation. He would stand it no longer. He repeated aloud with blasphemies unusual to him that he would stand it no longer.

He was a pale-faced little man, with dark eyes and a fine and very black moustache. He had a very stiff, upright collar slightly frayed, that gave him an illusory double chin, and his overcoat (albeit shabby) was trimmed with astrachan. His gloves were a bright brown with black stripes over the knuckles, and split at the finger ends. His appearance, his wife had said once in the dear, dead days beyond recall—before he married her, that is—was military. But now she called him—— It seems a dreadful thing to tell of between husband and wife, but she called him "a little grub." It wasn't the only thing she had called him, either.

The row had arisen about that beastly Jennie again. Jennie was his wife's friend, and by no invitation of Mr. Coombes she came in every blessed Sunday to dinner, and made a shindy all the afternoon. She was a big, noisy girl, with a taste for loud colours and a strident laugh; and this Sunday she had outdone all her previous intrusions by bringing in a fellow with her, a chap as showy as herself. And Mr. Coombes, in a starched, clean collar and his Sunday frock-coat, had sat dumb and wrathful at his own table, while his wife and her guests talked foolishly and undesirably, and laughed aloud. Well, he stood that, and after dinner (which, "as usual," was late), what must Miss Jennie do but go to the piano and play banjo tunes, for all the world as if it were a week-day! Flesh and blood could not endure such goings on. They would hear next door, they would hear in the road, it was a public announcement of their disrepute. He had to speak.

He had felt himself go pale, and a kind of rigour had affected his respiration as he delivered himself. He had been sitting on one of the chairs by the window—the new guest had taken possession of the arm-chair. He turned his head. "Sun Day!" he said over the collar, in the voice of one who warns. "Sun Day!" What people call a "nasty" tone it was.

Jennie had kept on playing, but his wife, who was looking through some music that was piled on the top of the piano,

had stared at him. "What's wrong now?" she said; "can't people enjoy themselves?"

"I don't mind rational 'njoyment at all," said little Coombes, "but I ain't a-going to have week-day tunes playing on a Sunday in this house."

"What's wrong with my playing now?" said Jennie, stopping and twirling round on the music-stool with a monstrous rustle of flounces.

Coombes saw it was going to be a row, and opened too vigorously, as is common with your timid, nervous men all the world over. "Steady on with that music-stool!" said he; "it ain't made for 'eavy weights."

"Never you mind about weights," said Jennie, incensed. "What was you saying behind my back about my playing?"

"Surely you don't 'old with not having a bit of music on a Sunday, Mr. Coombes?" said the new guest, leaning back in the arm-chair, blowing a cloud of cigarette smoke and smiling in a kind of pitying way. And simultaneously his wife said something to Jennie about "Never mind 'im. You go on, Jinny."

"I do," said Mr. Coombes, addressing the new guest.

"May I arst why?" said the new guest, evidently enjoying both his cigarette and the prospect of an argument. He was, by the bye, a lank young man, very stylishly dressed in bright drab, with a white cravat and a pearl and silver pin. It had been better taste to come in a black coat, Mr. Coombes thought.

"Because," began Mr. Coombes, "it don't suit me. I'm a business man. I 'ave to study my connection. Rational 'njoyment——"

"His connection!" said Mrs. Coombes scornfully. "That's what he's always a-saying. We got to do this, and we got to do that——"

"If you don't mean to study my connection," said Mr. Coombes, "what did you marry me for?"

"I wonder," said Jennie, and turned back to the piano.

"I never saw such a man as you," said Mrs. Coombes. "You've altered all round since we were married. Before——"

Then Jennie began at the tum, tum, tum again.

"Look here!" said Mr. Coombes, driven at last to revolt, standing up and raising his voice. "I tell you I won't have that." The frock-coat heaved with his indignation.

"No vil'ence, now," said the long young man in drab, sitting up.

"Who the juice are you?" said Mr. Coombes fiercely.

Whereupon they all began talking at once. The new guest said he was Jennie's "intended," and meant to protect her, and Mr. Coombes said he was welcome to do so anywhere but in his (Mr. Coombes') house; and Mrs. Coombes said he ought to be ashamed of insulting his guests, and (as I have already mentioned) that he was getting a regular little grub; and the

end was, that Mr. Coombes ordered his visitors out of the house, and they wouldn't go, and so he said he would go himself. With his face burning and tears of excitement in his eyes, he went into the passage, and as he struggled with his overcoat—his frock-coat sleeves got concertinaed up his arm—and gave a brush at his silk hat, Jennie began again at the piano, and strummed him insultingly out of the house. Tum, tum, tum. He slammed the shop door so that the house quivered. That, briefly, was the immediate making of his mood. You will perhaps begin to understand his disgust with existence.

As he walked along the muddy path under the firs—it was late October, and the ditches and heaps of fir needles were gorgeous with clumps of fungi—he recapitulated the melancholy history of his marriage. It was brief and commonplace enough. He now perceived with sufficient clearness that his wife had married him out of a natural curiosity and in order to escape from her worrying, laborious, and uncertain life in the workroom; and, like the majority of her class, she was far too stupid to realise that it was her duty to co-operate with him in his business. She was greedy of enjoyment, loquacious, and socially-minded, and evidently disappointed to find the restraints of poverty still hanging about her. His worries exasperated her, and the slightest attempt to control her proceedings resulted in a charge of "grumbling." Why couldn't he be nice—as he used to be? And Coombes was such a harmless little man, too, nourished mentally on *Self-Help*, and with a meagre ambition of self-denial and competition that was to end in a "sufficiency." Then Jennie came in as a female Mephistopheles, a gabbling chronicle of "fellers," and was always wanting his wife to go to theatres and "all that." And in addition were aunts of his wife, and cousins (male and female), to eat up capital, insult him personally, upset business arrangements, annoy good customers, and generally blight his life. It was not the first occasion by many that Mr. Coombes had fled his home in wrath and indignation and something like fear, vowing furiously and even aloud that he wouldn't stand it, and so frothing away his energy along the line of least resistance. But never before had he been quite so sick of life as on this particular Sunday afternoon. The Sunday dinner may have had its share in his despair—and the greyness of the sky. Perhaps, too, he was beginning to realise his unendurable frustration as a business man as the consequence of his marriage. Presently bankruptcy, and after that—Perhaps she might have reason to repent when it was too late. And destiny, as I have already intimated, had planted the path through the wood with evil-smelling fungi, thickly and variously planted it, not only on the right side but on the left.

A small shopman is in such a melancholy position if his

wife turns out a disloyal partner. His capital is all tied up in his business, and to leave her, means to join the unemployed in some strange part of the earth. The luxuries of divorce are beyond him altogether. So that the good old tradition of marriage for better or worse holds inexorably for him, and things work up to tragic culminations. Bricklayers kick their wives to death, and dukes betray theirs ; but it is among the small clerks and shopkeepers nowadays that it comes most often to a cutting of throats. Under the circumstances it is not so very remarkable—and you must take it as charitably as you can—that the mind of Mr. Coombes ran for a while on some such glorious close to his disappointed hopes, and that he thought of razors, pistols, bread-knives, and touching letters to the coroner denouncing his enemies by name, and praying piously for forgiveness. After a time his fierceness gave way to melancholia. He had been married in this very overcoat, in his first and only frock-coat that was buttoned up beneath it. He began to recall their courting along this very walk, his years of penurious saving to get capital, and the bright hopefulness of his marrying days. For it all to work out like this ! Was there no sympathetic ruler anywhere in the world ? He reverted to death as a topic.

He thought of the canal he had just crossed, and doubted whether he shouldn't stand with his head out, even in the middle, and it was while drowning was in his mind that the purple pileus caught his eye. He looked at it mechanically for a moment, and stopped and stooped towards it to pick it up, under the impression that it was some such small leather object as a purse. Then he saw that it was the purple top of a fungus, a peculiarly poisonous-looking purple : slimy, shiny, and emitting a sour odour. He hesitated with his hand an inch or so from it, and the thought of poison crossed his mind. With that he picked the thing, and stood up again with it in his hand.

The odour was certainly strong—acrid, but by no means disgusting. He broke off a piece, and the fresh surface was a creamy white, that changed like magic in the space of ten seconds to a yellowish-green colour. It was even an inviting-looking change. He broke off two other pieces to see it repeated. They were wonderful things these fungi, thought Mr. Coombes, and all of them the deadliest poisons, as his father had often told him. Deadly poisons !

There is no time like the present for a rash resolve. Why not here and now ? thought Mr. Coombes. He tasted a little piece, a very little piece indeed—a mere crumb. It was so pungent that he almost spat it out again, then merely hot and full-flavoured. A kind of German mustard with a touch of horse-radish and—well, mushroom. He swallowed it in the excitement of the moment. Did he like it or did he not ? His mind was curiously careless. He would try another bit.

It really wasn't bad—it was good. He forgot his troubles in the interest of the immediate moment. Playing with death it was. He took another bite, and then deliberately finished a mouthful. A curious tingling sensation began in his fingertips and toes. His pulse began to move faster. The blood in his ears sounded like a mill-race. "Try bi' more," said Mr. Coombes. He turned and looked about him, and found his feet unsteady. He saw and struggled towards a little patch of purple a dozen yards away. "Jol' goo' stuff," said Mr. Coombes. "E—lomore ye'." He pitched forward and fell on his face, his hands outstretched towards the cluster of pilei. But he did not eat any more of them. He forgot forthwith.

He rolled over and sat up with a look of astonishment on his face. His carefully brushed silk hat had rolled away towards the ditch. He pressed his hand to his brow. Something had happened, but he could not rightly determine what it was. Anyhow, he was no longer dull—he felt bright, cheerful. And his throat was afire. He laughed in the sudden gaiety of his heart. Had he been dull? He did not know; but at any rate he would be dull no longer. He got up and stood unsteadily, regarding the universe with an agreeable smile. He began to remember. He could not remember very well, because of a steam roundabout that was beginning in his head. And he knew he had been disagreeable at home, just because they wanted to be happy. They were quite right; life should be as gay as possible. He would go home and make it up, and reassure them. And why not take some of this delightful toadstool with him, for them to eat? A hatful, no less. Some of those red ones with white spots as well, and a few yellow. He had been a dull dog, an enemy to merriment; he would make up for it. It would be gay to turn his coat-sleeves inside out, and stick some yellow gorse into his waistcoat pockets. Then home—singing—for a jolly evening.

After the departure of Mr. Coombes, Jennie discontinued playing, and turned round on the music-stool again. "What a fuss about nothing," said Jennie.

"You see, Mr. Clarence, what I've got to put up with," said Mrs. Coombes.

"He is a bit hasty," said Mr. Clarence judicially.

"He ain't got the slightest sense of our position," said Mrs. Coombes; "that's what I complain of. He cares for nothing but his old shop; and if I have a bit of company, or buy anything to keep myself decent, or get any little thing I want out of the housekeeping money, there's disagreeables. 'Economy,' he says; 'struggle for life,' and all that. He lies awake of nights about it, worrying how he can screw me out of a shilling. He wanted us to eat Dorset butter once. If once I was to give in to him—there!"

"Of course," said Jennie.

"If a man values a woman," said Mr. Clarence, lounging back in the arm-chair, "he must be prepared to make sacrifices for her. For my own part," said Mr. Clarence, with his eye on Jennie, "I shouldn't think of marrying till I was in a position to do the thing in style. It's downright selfishness. A man ought to go through the rough-and-tumble by himself, and not drag her——"

"I don't agree altogether with that," said Jennie. "I don't see why a man shouldn't have a woman's help, provided he doesn't treat her meanly, you know. It's meanness——"

"You wouldn't believe," said Mrs. Coombes. "But I was a fool to 'ave 'im. I might 'ave known. If it 'adn't been for my father, we shouldn't have had not a carriage to our wedding."

"Lord! he didn't stick out at that?" said Mr. Clarence, quite shocked.

"Said he wanted the money for his stock, or some such rubbish. Why, he wouldn't have a woman in to help me once a week if it wasn't for my standing out plucky. And the fusses he makes about money—comes to me, well, pretty near crying, with sheets of paper and figgers. 'If only we can tide over this year,' he says, 'the business is bound to go.' 'If only we can tide over this year,' I says, 'then it'll be, if only we can tide over next year. I know you,' I says. 'And you don't catch me screwing myself lean and ugly. Why didn't you marry a slavey?' I says, 'if you wanted one—instead of a respectable girl,' I says."

So Mrs. Coombes. But we will not follow this unedifying conversation further. Suffice it that Mr. Coombes was very satisfactorily disposed of, and they had a snug little time round the fire. Then Mrs. Coombes went to get the tea, and Jennie sat coquettishly on the arm of Mr. Clarence's chair until the tea-things clattered outside. "What was that I heard?" asked Mrs. Coombes playfully, as she entered, and there was badinage about kissing. They were just sitting down to the little circular table when the first intimation of Mr. Coombes' return was heard.

This was a fumbling at the latch of the front door.

"'Ere's my lord," said Mrs. Coombes. "Went out like a lion and comes back like a lamb, I'll lay."

Something fell over in the shop: a chair, it sounded like. Then there was a sound as of some complicated step exercise in the passage. Then the door opened and Coombes appeared. But it was Coombes transfigured. The immaculate collar had been torn carelessly from his throat. His carefully-brushed silk hat, half full of a crush of fungi, was under one arm; his coat was inside out, and his waistcoat adorned with bunches of yellow-blossomed furze. These little eccentricities of Sunday costume, however, were quite overshadowed by the change in his face; it was livid white, his eyes were un-

naturally large and bright, and his pale blue lips were drawn back in a cheerless grin. "Merry!" he said. He had stopped dancing to open the door. "Rational 'njoyment. Dance." He made three fantastic steps into the room, and stood bowing.

"Jim!" shrieked Mrs. Coombes, and Mr. Clarence sat petrified, with a dropping lower jaw.

"Tea," said Mr. Coombes. "Jol' things, tea. Tosestools, too. Brosher."

"He's drunk," said Jennie in a weak voice. Never before had she seen this intense pallor in a drunken man, or such shining, dilated eyes.

Mr. Coombes held out a handful of scarlet agaric to Mr. Clarence. "Jo' stuff," said he; "ta' some."

At that moment he was genial. Then at the sight of their startled faces he changed, with the swift transition of insanity, into overbearing fury. And it seemed as if he had suddenly recalled the quarrel of his departure. In such a huge voice as Mrs. Coombes had never heard before, he shouted, "My house. I'm master 'ere. Eat what I give yer!" He bawled this, as it seemed, without an effort, without a violent gesture, standing there as motionless as one who whispers, holding out a handful of fungus.

Clarence approved himself a coward. He could not meet the mad fury in Coombes' eyes; he rose to his feet, pushing back his chair, and turned, stooping. At that Coombes rushed at him. Jennie saw her opportunity, and, with the ghost of a shriek, made for the door. Mrs. Coombes followed her. Clarence tried to dodge. Over went the tea-table with a smash as Coombes clutched him by the collar and tried to thrust the fungus into his mouth. Clarence was content to leave his collar behind him, and shot out into the passage with red patches of fly agaric still adherent to his face. "Shut 'im in!" cried Mrs. Coombes, and would have closed the door, but her supports deserted her; Jennie saw the shop door open, and vanished thereby, locking it behind her, while Clarence went on hastily into the kitchen. Mr. Coombes came heavily against the door, and Mrs. Coombes, finding the key was inside, fled upstairs and locked herself in the spare bedroom.

So the new convert to *joie de vivre* emerged upon the passage, his decorations a little scattered, but that respectable hatful of fungi still under his arm. He hesitated at the three ways, and decided on the kitchen. Whereupon Clarence, who was fumbling with the key, gave up the attempt to imprison his host, and fled into the scullery, only to be captured before he could open the door into the yard. Mr. Clarence is singularly reticent of the details of what occurred. It seems that Mr. Coombes' transitory irritation had vanished again, and he was once more a genial playfellow. And as there were knives and meat choppers about, Clarence very generously

resolved to humour him and so avoid anything tragic. It is beyond dispute that Mr. Coombes played with Mr. Clarence to his heart's content; they could not have been more playful and familiar if they had known each other for years. He insisted gaily on Clarence trying the fungi, and after a friendly tussle, was smitten with remorse at the mess he was making of his guest's face. It also appears that Clarence was dragged under the sink and his face scrubbed with the blacking brush—he being still resolved to humour the lunatic at any cost—and that finally, in a somewhat dishevelled, chipped, and discoloured condition, he was assisted to his coat and shown out by the back door, the shopway being barred by Jennie. Mr. Coombes' wandering thoughts then turned to Jennie. Jennie had been unable to unfasten the shop door, but she shot the bolts against Mr. Coombes' latch-key, and remained in possession of the shop for the rest of the evening.

It would appear that Mr. Coombes then returned to the kitchen, still in pursuit of gaiety, and, albeit a strict Good Templar, drank (or spilt down the front of the first and only frock-coat) no less than five bottles of the stout Mrs. Coombes insisted upon having for her health's sake. He made cheerful noises by breaking off the necks of the bottles with several of his wife's wedding-present dinner-plates, and during the earlier part of this great drunk he sang divers merry ballads. He cut his finger rather badly with one of the bottles—the only bloodshed in this story—and what with that, and the systematic convulsion of his inexperienced physiology by the liquorish brand of Mrs. Coombes' stout, it may be the evil of the fungus poison was somehow allayed. But we prefer to draw a veil over the concluding incidents of this Sunday afternoon. They ended in the coal cellar, in a deep and healing sleep.

An interval of five years elapsed. Again it was a Sunday afternoon in October, and again Mr. Coombes walked through the pinewood beyond the canal. He was still the same dark-eyed, black-moustached little man that he was at the outset of the story, but his double chin was now scarcely so illusory as it had been. His overcoat was new, with a velvet lapel, and a stylish collar with turn-down corners, free of any coarse starchiness, had replaced the original all-round article. His hat was glossy, his gloves newish—though one finger had split and been carefully mended. And a casual observer would have noticed about him a certain rectitude of bearing, a certain erectness of head that marks the man who thinks well of himself. He was a master now, with three assistants. Beside him walked a larger sunburnt parody of himself, his brother Tom, just back from Australia. They were recapitulating their early struggles, and Mr. Coombes had just been making a financial statement.

"It's a very nice little business, Jim," said brother Tom.

"In these days of competition you're jolly lucky to have worked it up so. And you're jolly lucky, too, to have a wife who's willing to help like yours does."

"Between ourselves," said Mr. Coombes, "it wasn't always so. It wasn't always like this. To begin with, the missus was a bit giddy. Girls are funny creatures."

"Dear me!"

"Yes. You'd hardly think it, but she was downright extravagant, and always having slaps at me. I was a bit too easy and loving, and all that, and she thought the whole blessed show was run for her. Turned the 'ouse into a regular caravansery, always having her relations and girls from business in, and their chaps. Comic songs a' Sunday, it was getting to, and driving trade away. And she was making eyes at the chaps, too! I tell you, Tom, the place wasn't my own."

"Shouldn't 'a' thought it."

"It was so. Well—I reasoned with her. I said, 'I ain't a duke, to keep a wife like a pet animal. I married you for 'elp and company.' I said, 'You got to 'elp and pull the business through.' She wouldn't 'ear of it. 'Very well,' I says; 'I'm a mild man till I'm roused,' I says, 'and it's getting to that.' But she wouldn't 'ear of no warnings."

"Well?"

"It's the way with women. She didn't think I 'ad it in me to be roused. Women of her sort (between ourselves, Tom) don't respect a man until they're a bit afraid of him. So I just broke out to show her. In comes a girl named Jennie, that used to work with her, and her chap. We 'ad a bit of a row, and I came out 'ere—it was just such another day as this—and I thought it all out. Then I went back and pitched into them."

"You did?"

"I did. I was mad, I can tell you. I wasn't going to 'it 'er, if I could 'elp it, so I went back and licked into this chap, just to show 'er what I could do. 'E was a big chap, too. Well, I chucked him, and smashed things about, and gave 'er a scaring, and she ran up and locked 'erself into the spare room."

"Well?"

"That's all. I says to 'er the next morning, 'Now you know,' I says, 'what I'm like when I'm roused.' And I didn't 'ave to say anything more."

"And you've been happy ever after, eh?"

"So to speak. There's nothing like putting your foot down with them. If it 'adn't been for that afternoon I should 'a' been tramping the roads now, and she'd 'a' been grumbling at me, and all her family grumbling for bringing her to poverty—I know their little ways. But we're all right now. And it's a very decent little business, as you say."

They proceed on their way meditatively. "Women are funny creatures," said brother Tom.

"They want a firm hand," says Coombes.

"What a lot of these funguses there are about here!" remarked brother Tom presently. "I can't see what use they are in the world."

Mr. Coombes looked. "I dessay they're sent for some wise purpose," said Mr. Coombes.

And that was as much thanks as the purple pileus ever got for maddening this absurd little man to the pitch of decisive action, and so altering the whole course of his life.

STORY TWENTY-NINE

THE JILTING OF JANE

As I sit writing in my study, I can hear our Jane bumping her way downstairs with a brush and dustpan. She used in the old days to sing hymn tunes, or the British national song for the time being, to these instruments, but latterly she has been silent and even careful over her work. Time was when I prayed with fervour for such silence, and my wife with sighs for such care, but now they have come we are not so glad as we might have anticipated we should be. Indeed, I would rejoice secretly, though it may be unmanly weakness to admit it, even to hear Jane sing "Daisy," or by the fracture of any plate but one of Euphemia's best green ones, to learn that the period of brooding has come to an end.

Yet how we longed to hear the last of Jane's young man before we heard the last of him! Jane was always very free with her conversation to my wife, and discoursed admirably in the kitchen on a variety of topics—so well, indeed, that I sometimes left my study door open—our house is a small one—to partake of it. But after William came, it was always William, nothing but William; William this and William that; and when we thought William was worked out and exhausted altogether, then William all over again. The engagement lasted altogether three years; yet how she got introduced to William, and so became thus saturated with him, was always a secret. For my part, I believe it was at the street corner where the Rev. Barnabas Baux used to hold an open-air service after evensong on Sundays. Young Cupids were wont to flit like moths round the paraffin flare of that centre of High Church hymn-singing. I fancy she stood singing hymns there, out of memory and her imagination, instead of coming home to get supper, and William came up beside her and said, "Hello!" "Hello yourself!" she said; and, etiquette being satisfied, they proceeded to converse.

As Euphemia has a reprehensible way of letting her servants talk to her, she soon heard of him. "He is *such* a respectable young man, ma'am," said Jane, "you don't know." Ignoring the slur cast on her acquaintance, my wife inquired further about this William.

"He is second porter at Maynard's, the draper's," said Jane, "and gets eighteen shillings—nearly a pound—a week, m'm; and when the head porter leaves he will be head porter. His relatives are quite superior people, m'm. Not labouring people at all. His father was a greengrosher, m'm, and had a chumor, and he was bankrupt twice. And one of his sisters is in a Home for the Dying. It will be a very good match for me, m'm," said Jane, "me being an orphan girl."

"Then you are engaged to him?" asked my wife.

"Not engaged, m'm; but he is saving money to buy a ring—hammyfist."

"Well, Jane, when you are properly engaged to him you may ask him round here on Sunday afternoons, and have tea with him in the kitchen." For my Euphemia has a motherly conception of her duty towards her maid-servants. And presently the amethystine ring was being worn about the house, even with ostentation, and Jane developed a new way of bringing in the joint, so that this gage was evident. The elder Miss Maitland was aggrieved by it, and told my wife that servants ought not to wear rings. But my wife looked it up in *Enquire Within* and *Mrs. Motherly's Book of Household Management*, and found no prohibition. So Jane remained with this happiness added to her love.

The treasure of Jane's heart appeared to me to be what respectable people call a very deserving young man. "William, ma'am," said Jane one day suddenly, with ill-concealed complacency, as she counted out the beer bottles, "William, ma'am, is a teetotalter. Yes, m'm; and he don't smoke. Smoking, ma'am," said Jane, as one who reads the heart, "do make such a dust about. Beside the waste of money. And the smell. However, I suppose it's necessary to some."

Possibly it dawned on Jane that she was reflecting a little severely upon Euphemia's comparative ill-fortune, and she added kindly, "I'm sure the master is a hangel when his pipe's alight. Compared to other times."

William was at first a rather shabby young man of the ready-made black coat school of costume. He had watery grey eyes, and a complexion appropriate to the brother of one in a Home for the Dying. Euphemia did not fancy him very much, even at the beginning. His eminent respectability was vouched for by an alpaca umbrella, from which he never allowed himself to be parted.

"He goes to chapel," said Jane. "His papa, ma'am——"

"His *what*, Jane?"

"His papa, ma'am, was Church; but Mr. Maynard is a Plymouth Brother, and William thinks it Policy, ma'am, to go there too. Mr. Maynard comes and talks to him quite friendly, when they ain't busy, about using up all the ends of string, and about his soul. He takes a lot of notice, do Maynard, of William, and the way he saves string and his soul, ma'am."

Presently we heard that the head porter at Maynard's had left, and that William was head porter at twenty-three shillings a week. "He is really kind of over the man who drives the van," said Jane, "and him married with three children." And she promised in the pride of her heart to make interest for us with William to favour us so that we might get our parcels of drapery from Maynard's with exceptional promptitude.

After this promotion a rapidly increasing prosperity came

upon Jane's young man. One day, we learned that Mr. Maynard had given William a book. "Smiles' Elp Yourself, it's called," said Jane; "but it ain't comic. It tells you how to get on in the world, and some what William read to me was lovely, ma'am."

Euphemia told me of this laughing, and then she became suddenly grave. "Do you know, dear," she said, "Jane said one thing I did not like. She had been quiet for a minute, and then she suddenly remarked, 'William is a lot above me, ma'am, ain't he?'"

"I don't see anything in that," I said, though later my eyes were to be opened.

One Sunday afternoon about that time I was sitting at my writing-desk—possibly I was reading a good book—when a something went by the window. I heard a startled exclamation behind me, and saw Euphemia with her hands clasped together and her eyes dilated. "George," she said in an awestricken whisper, "did you see?"

Then we both spoke to one another at the same moment, slowly and solemnly: "*A silk hat! Yellow gloves! A new umbrella!*"

"It may be my fancy, dear," said Euphemia; "but his tie was very like yours. I believe Jane keeps him in ties. She told me a little while ago in a way that implied volumes about the rest of your costume, 'The master *do* wear pretty ties, ma'am.' And he echoes all your novelties."

The young couple passed our window again on their way to their customary walk. They were arm in arm. Jane looked exquisitely proud, happy, and uncomfortable, with new white cotton gloves, and William, in the silk hat, singularly genteel!

That was the culmination of Jane's happiness when she returned. "Mr. Maynard has been talking to William, ma'am," she said, "and he is to serve customers, just like the young shop gentlemen, during the next sale. And if he gets on, he is to be made an assistant, ma'am, at the first opportunity. He has got to be as gentlemanly as he can, ma'am; and if he ain't, ma'am, he says it won't be for want of trying. Mr. Maynard has took a great fancy to him."

"He is getting on, Jane," said my wife.

"Yes, ma'am," said Jane thoughtfully, "he is getting on." And she sighed.

That next Sunday, as I drank my tea, I interrogated my wife. "How is this Sunday different from all other Sundays, little woman? What has happened? Have you altered the curtains, or rearranged the furniture, or where is the indefinable difference of it? Are you wearing your hair in a new way without warning me? I clearly perceive a change in my environment, and I cannot for the life of me say what it is."

Then my wife answered in her most tragic voice, "George,"

she said, "that—that William has not come near the place to-day! And Jane is crying her heart out upstairs."

There followed a period of silence. Jane, as I have said, stopped singing about the house, and began to care for our brittle possessions, which struck my wife as being a very sad sign indeed. The next Sunday, and the next, Jane asked to go out, "to walk with William," and my wife, who never attempts to extort confidences, gave her permission, and asked no questions. On each occasion Jane came back looking flushed and very determined. At last one day she became communicative.

"William is being led away," she remarked abruptly, with a catching of the breath, apropos of tablecloths. "Yes, ma'am. She is a milliner, and she can play on the piano."

"I thought," said my wife, "that you went out with him on Sunday."

"Not out with him, m'm—after him. I walked along by the side of them, and told her he was engaged to me."

"Dear me, Jane, did you? What did they do?"

"Took no more notice of me than if I was dirt. So I told her she should suffer for it."

"It could not have been a very agreeable walk, Jane."

"Not for no parties, ma'am."

"I wish," said Jane, "I could play the piano, ma'am. But anyhow, I don't mean to let *her* get him away from me. She's older than him, and her hair ain't gold to the roots, ma'am."

It was on the August Bank Holiday that the crisis came. We do not clearly know the details of the fray, but only such fragments as poor Jane let fall. She came home dusty, excited, and with her heart hot within her.

The milliner's mother, the milliner, and William had made a party to the Art Museum at South Kensington, I think. Anyhow, Jane had calmly but firmly accosted them somewhere in the streets, and asserted her right to what, in spite of the consensus of literature, she held to be her inalienable property. She did, I think, go so far as to lay hands on him. They dealt with her in a crushingly superior way. They "called a cab." There was a "scene," William being pulled away into the four-wheeler by his future wife and mother-in-law from the reluctant hands of our discarded Jane. There were threats of giving her "in charge."

"My poor Jane!" said my wife, mincing veal as though she was mincing William. "It's a shame of them. I would think no more of him. He is not worthy of you."

"No, m'm," said Jane. "He *is* weak."

"But it's that woman has done it," said Jane. She was never known to bring herself to pronounce "that woman's" name or to admit her girlishness. "I can't think what minds some women must have—to try and get a girl's young man

away from her. But there, it only hurts to talk about it," said Jane.

Thereafter our house rested from William. But there was something in the manner of Jane's scrubbing the front doorstep or sweeping out the rooms, a certain viciousness, that persuaded me that the story had not yet ended.

"Please, m'm, may I go and see a wedding to-morrow?" said Jane one day.

My wife knew by instinct whose wedding. "Do you think it is wise, Jane?" she said.

"I would like to see the last of him," said Jane.

"My dear," said my wife, fluttering into my room about twenty minutes after Jane had started, "Jane has been to the boot-hole and taken all the left-off boots and shoes, and gone off to the wedding with them in a bag. Surely she cannot mean——"

"Jane," I said, "is developing character. Let us hope for the best."

Jane came back with a pale, hard face. All the boots seemed to be still in her bag, at which my wife heaved a premature sigh of relief. We heard her go upstairs and replace the boots with considerable emphasis.

"Quite a crowd at the wedding, ma'am," she said presently, in a purely conversational style, sitting in our little kitchen, and scrubbing the potatoes; "and such a lovely day for them." She proceeded to numerous other details, clearly avoiding some cardinal incident.

"It was all extremely respectable and nice, ma'am, but *her* father didn't wear a black coat, and looked quite out of place, ma'am. Mr. Piddingquirk——"

"*Who?*"

"Mr. Piddingquirk—William that *was*, ma'am—had white gloves, and a coat like a clergyman, and a lovely chrysanthemum. He looked so nice, ma'am. And there was red carpet down, just like for gentlefolks. And they say he gave the clerk four shillings, ma'am. It was a real kerridge they had—not a fly. When they came out of church there was rice-throwing, and her two little sisters dropping dead flowers. And some one threw a slipper, and then I threw a boot——"

"Threw a *boot*, Jane!"

"Yes, ma'am. Aimed at *her*. But it hit *him*. Yes, ma'am, hard. Gev him a black eye, I should think. I only threw that one. I hadn't the heart to try again. All the little boys cheered when it hit him."

After an interval—"I'm sorry the boot hit *him*."

Another pause. The potatoes were being scrubbed violently. "He always *was* a bit above me, you know, ma'am. And he was led away."

The potatoes were more than finished. Jane rose sharply, with a sigh, and rapped the basin down on the table.

"I don't care," she said. "I don't care a rap. He will find out his mistake yet. It serves me right. I was stuck up about him. I ought not to have looked so high. And I am glad things are as things are."

My wife was in the kitchen, seeing to the cookery. After the confession of the boot-throwing, she must have watched poor Jane fuming with a certain dismay in those brown eyes of hers. But I imagine they softened again very quickly, and then Jane's must have met them.

"Oh, ma'am," said Jane, with an astonishing change of note, "think of all that *might* have been! Oh, ma'am, I *could* have been so happy! I ought to have known, but I didn't know. . . . You're very kind to let me talk to you, ma'am . . . for it's hard on me, ma'am . . . it's har-r-r-d——"

And I gather that Euphemia so far forgot herself as to let Jane sob out some of the fulness of her heart on a sympathetic shoulder. My Euphemia, thank Heaven, has never properly grasped the importance of "keeping up her position." And since that fit of weeping, much of the accent of bitterness has gone out of Jane's scrubbing and brush-work.

Indeed, something passed the other day with the butcher-boy—but that scarcely belongs to this story. However, Jane is young still, and time and change are at work with her. We all have our sorrows, but I do not believe very much in the existence of sorrows that never heal.

STORY THIRTY

IN THE MODERN VEIN: AN UNSYMPATHETIC LOVE STORY

OF course the cultivated reader has heard of Aubrey Vair. He has published on three several occasions volumes of delicate verses—some, indeed, border on indelicacy—and his column "Of Things Literary" in the *Climax* is well known. His Byronic visage and an interview have appeared in the *Perfect Lady*. It was Aubrey Vair, I believe, who demonstrated that the humour of Dickens was worse than his sentiment, and who detected "a subtle bourgeois flavour" in Shakespeare. However, it is not generally known that Aubrey Vair has had erotic experiences as well as erotic inspirations. He adopted Goethe some little time since as his literary prototype, and that may have had something to do with his temporary lapse from sexual integrity.

For it is one of the commonest things that undermine literary men, giving us landslips and picturesque effects along the otherwise even cliff of their respectable life, ranking next to avarice, and certainly above drink, this instability called genius, or, more fully, the consciousness of genius, such as Aubrey Vair possessed. Since Shelley set the fashion, your man of gifts has been assured that his duty to himself and his duty to his wife are incompatible, and his renunciation of the Philistine has been marked by such infidelity as his means and courage warranted. Most virtue is lack of imagination. At any rate, a minor genius without his affections twisted into an inextricable muddle, and who did not occasionally shed sonnets over his troubles, I have never met.

Even Aubrey Vair did this, weeping the sonnets overnight into his blotting-book, and pretending to write literary *causeuse* when his wife came down in her bath slippers to see what kept him up. She did not understand him, of course. He did this even before the other woman appeared, so ingrained is conjugal treachery in the talented mind. Indeed, he wrote more sonnets before the other woman came than after that event, because thereafter he spent much of his leisure in cutting down the old productions, retrimming them, and generally altering this readymade clothing of his passion to suit her particular height and complexion.

Aubrey Vair lived in a little red villa with a lawn at the back and a view of the Downs behind Reigate. He lived upon discreet investment eked out by literary work. His wife was handsome, sweet, and gentle, and—such is the tender humility of good married women—she found her life's happiness in seeing that little Aubrey Vair had well-cooked variety for dinner, and that their house was the neatest and brightest of all the houses they entered. Aubrey Vair enjoyed the dinners, and was

proud of the house, yet nevertheless he mourned because his genius dwindled. Moreover, he grew plump, and corpulence threatened him.

We learn in suffering what we teach in song, and Aubrey Vair knew certainly that his soul could give no creditable crops unless his affections were harrowed. And how to harrow them was the trouble, for Reigate is a moral neighbourhood.

So Aubrey Vair's romantic longings blew loose for a time, much as a seedling creeper might, planted in the midst of a flower-bed. But at last, in the fulness of time, the other woman came to the embrace of Aubrey Vair's yearning heart-tendrils, and his romantic episode proceeded as is here faithfully written down.

The other woman was really a girl, and Aubrey Vair met her first at a tennis party at Redhill. Aubrey Vair did not play tennis after the accident to Miss Morton's eye, and because latterly it made him pant and get warmer and moister than even a poet should be ; and this young lady had only recently arrived in England, and could not play. So they gravitated into the two vacant basket chairs beside Mrs. Bayne's deaf aunt, in front of the hollyhocks, and were presently talking at their ease together.

The other woman's name was unpropitious—Miss Smith—but you would never have suspected it from her face and costume. Her parentage was promising, she was an orphan, her mother was a Hindoo, and her father an Indian civil servant ; and Aubrey Vair—himself a happy mixture of Kelt and Teuton, as, indeed, all literary men have to be nowadays—naturally believed in the literary consequences of a mixture of races. She was dressed in white. She had finely moulded pale features, great depth of expression, and a cloud of delicately *frisé* black hair over her dark eyes, and she looked at Aubrey Vair with a look half curious and half shy, that contrasted admirably with the stereotyped frankness of your common Reigate girl.

"This is a splendid lawn—the best in Redhill," said Aubrey Vair in the course of the conversation ; "and I like it all the better because the daisies are spared." He indicated the daisies with a graceful sweep of his rather elegant hand.

"They are sweet little flowers," said the lady in white, "and I have always associated them with England, chiefly, perhaps, through a picture I saw 'over there' when I was very little, of children making daisy chains. I promised myself that pleasure when I came home. But, alas ! I feel now rather too large for such delights."

"I do not see why we should not be able to enjoy these simple pleasures as we grow older—why our growth should have in it so much forgetting. For my own part——"

"Has your wife got Jane's recipe for stuffing trout ?" asked Mrs. Bayne's deaf aunt abruptly.

"I really don't know," said Aubrey Vair.

"That's all right," said Mrs. Bayne's deaf aunt. "It ought to please even you."

"Anything will please me," said Aubrey Vair; "I care very little——"

"Oh, it's a lovely dish," said Mrs. Bayne's deaf aunt, and relapsed into contemplation.

"I was saying," said Aubrey Vair, "that I think I still find my keenest pleasures in childish pastimes. I have a little nephew that I see a great deal of, and when we fly kites together, I am sure it would be hard to tell which of us is the happier. By the bye, you should get at your daisy chains in that way. Beguile some little girl."

"But I did. I took that Morton mite for a walk in the meadows, and timidly broached the subject. And she reproached me for suggesting 'frivolous pursuits.' It was a horrible disappointment."

"The governess here," said Aubrey Vair, "is robbing that child of its youth in a terrible way. What will a life be that has no childhood at the beginning?"

"Some human beings are never young," he continued, "and they never grow up. They lead absolutely colourless lives. They are—they are etiolated. They never love, and never feel the loss of it. They are—for the moment I can think of no better image—they are human flower-pots, in which no soul has been planted. But a human soul properly growing must begin in a fresh childishness."

"Yes," said the dark lady thoughtfully, "a careless childhood, running wild almost. That should be the beginning."

"Then we pass through the wonder and diffidence of youth."

"To strength and action," said the dark lady. Her dreamy eyes were fixed on the Downs, and her fingers tightened on her knees as she spoke. "Ah, it is a grand thing to live—as a man does—self-reliant and free."

"And so at last," said Aubrey Vair, "come to the culmination and crown of life." He paused and glanced hastily at her. Then he dropped his voice almost to a whisper—"And the culmination of life is love."

Their eyes met for a moment, but she looked away at once. Aubrey Vair felt a peculiar thrill and a catching in his breath, but his emotions were too complex for analysis. He had a certain sense of surprise, also, at the way his conversation had developed.

Mrs. Bayne's deaf aunt suddenly dug him in the chest with her ear-trumpet, and some one at tennis bawled, "Love all!"

"Did I tell you Jane's girls have had scarlet fever?" asked Mrs. Bayne's deaf aunt.

"No," said Aubrey Vair.

"Yes; and they are peeling now," said Mrs. Bayne's deaf

aunt, shutting her lips tightly, and nodding in a slow, significant manner at both of them.

There was a pause. All three seemed lost in thought too deep for words.

"Love," began Aubrey Vair presently, in a severely philosophical tone, leaning back in his chair, holding his hands like a praying saint's in front of him, and staring at the toe of his shoe—"love is, I believe, the one true and real thing in life. It rises above reason, interest, or explanation. Yet I never read of an age when it was so much forgotten as it is now. Never was love expected to run so much in appointed channels, never was it so despised, checked, ordered, and obstructed. Policemen say, 'This way, Eros!' As a result, we relieve our emotional possibilities in the hunt for gold and notoriety. And after all, with the best fortune in these, we only hold up the gilded images of our success, and are weary slaves, with unsatisfied hearts, in the pageant of life."

Aubrey Vair sighed, and there was a pause. The girl looked at him out of the mysterious darkness of her eyes. She had read many books, but Aubrey Vair was her first literary man, and she took this kind of thing for genius—as girls have done before.

"We are," continued Aubrey Vair, conscious of a favourable impression—"we are like fireworks, mere dead, inert things until the appointed spark comes, and then—if it is not damp—the dormant soul blazes forth in all its warmth and beauty. That is living. I sometimes think, do you know, that we should be happier if we could die soon after that golden time, like the Ephemerids. There is a decay sets in."

"Eigh?" said Mrs. Bayne's deaf aunt startlingly. "I didn't hear you."

"I was on the point of remarking," shouted Aubrey Vair, wheeling the array of his thoughts—"I was on the point of remarking that few people in Redhill could match Mrs. Morton's fine broad green."

"Others have noticed it," Mrs. Bayne's deaf aunt shouted back. "It is since she has had in her new false teeth"

This interruption dislocated the conversation a little. However——

"I must thank you, Mr. Vair," said the dark girl, when they parted that afternoon, "for having given me very much to think about."

And from her manner, Aubrey Vair perceived clearly he had not wasted his time.

It would require a subtler pen than mine to tell how from that day a passion for Miss Smith grew like Jonah's gourd in the heart of Aubrey Vair. He became pensive, and in the prolonged absence of Miss Smith, irritable. Mrs. Aubrey Vair felt the change in him, and put it down to a vitriolic Saturday

Reviewer. Indisputably the *Saturday* does at times go a little far. He re-read *Elective Affinities*, and lent it to Miss Smith. Incredible as it may appear to members of the Areopagus Club, where we know Aubrey Vair, he did also beyond all question inspire a sort of passion in that sombre-eyed, rather clever, and really very beautiful girl.

He talked to her a lot about love and destiny, and all that bric-à-brac of the minor poet. And they talked together about his genius. He elaborately, though discreetly, sought her society, and presented and read to her the mulder of his unpublished sonnets. We consider his Byronic features pasty, but the feminine mind has its own laws. I suppose, also where a girl is not a fool, a literary man has an enormous advantage over any one but a preacher, in the show he can make of his heart's wares.

At last a day in that summer came when he met her alone, possibly by chance, in a quiet lane towards Horley. There were ample hedges on either side, rich with honeysuckle, vetch, and mullein.

They conversed intimately of his poetic ambitions, and then he read her those verses of his subsequently published in *Hobson's Magazine*: "Tenderly ever, since I have met thee." He had written these the day before; and though I think the sentiment is uncommonly trite, there is a redeeming note of sincerity about the lines not conspicuous in all Aubrey Vair's poetry.

He read rather well, and a swell of genuine emotion crept into his voice as he read, with one white hand thrown out to point the rhythm of the lines. "Ever, my sweet, for thee," he concluded, looking up into her face.

Before he looked up, he had been thinking chiefly of his poem and its effect. Straightway he forgot it. Her arms hung limply before her, and her hands were clasped together. Her eyes were very tender.

"Your verses go to the heart," she said softly.

Her mobile features were capable of wonderful shades of expression. He suddenly forgot his wife and his position as a minor poet as he looked at her. It is possible that his classical features may themselves have undergone a certain transfiguration. For one brief moment—and it was always to linger in his memory—destiny lifted him out of his vain little self to a nobler level of simplicity. The copy of "Tenderly ever" fluttered from his hand. Considerations vanished. Only one thing seemed of importance.

"I love you," he said abruptly.

An expression of fear came into her eyes. The grip of her hands upon one another tightened convulsively. She became very pale.

Then she moved her lips as if to speak, bringing her face slightly nearer to his. There was nothing in the world at that

moment for either of them but one another. They were both trembling exceedingly. In a whisper she said, "You love me?"

Aubrey Vair stood quivering and speechless, looking into her eyes. He had never seen such a light as he saw there before. He was in a wild tumult of emotion. He was dreadfully scared at what he had done. He could not say another word. He nodded.

"And this has come to me?" she said presently, in the same awe-stricken whisper, and then, "Oh, my love, my love!"

And thereupon Aubrey Vair had her clasped to himself, her cheek upon his shoulder and his lips to hers.

Thus it was that Aubrey Vair came by the cardinal memory of his life. To this day it recurs in his works.

A little boy clambering in the hedge some way down the lane saw this group with surprise, and then with scorn and contempt. Reckless of his destiny, he turned away, feeling that he at least could never come to the unspeakable unmanliness of hugging girls. Unhappily for Reigate scandal, his shame for his sex was altogether too deep for words.

An hour after, Aubrey Vair returned home in a hushed mood. There were muffins after his own heart for his tea—Mrs. Aubrey Vair had had hers. And there were chrysanthemums, chiefly white ones—flowers he loved—set out in the china bowl he was wont to praise. And his wife came behind him to kiss him as he sat eating.

"De lill Jummuns," she remarked, kissing him under the ear.

Then it came into the mind of Aubrey Vair with startling clearness, while his ear was being kissed, and with his mouth full of muffin, that life is a singularly complex thing.

The summer passed at last into the harvest-time, and the leaves began falling. It was evening, the warm sunset light still touched the Downs, but up the valley a blue haze was creeping. One or two lamps in Reigate were already alight.

About half-way up the slanting road that scales the Downs, there is a wooden seat where one may obtain a fine view of the red villas scattered below, and of the succession of blue hills beyond. Here the girl with the shadowy face was sitting.

She had a book on her knees, but it lay neglected. She was leaning forward, her chin resting upon her hand. She was looking across the valley into the darkening sky, with troubled eyes.

Aubrey Vair appeared through the hazel-bushes, and sat down beside her. He held half a dozen dead leaves in his hand. She did not alter her attitude. "Well?" she said.

"Is it to be flight?" he asked.

Aubrey Vair was rather pale. He had been having bad nights latterly, with dreams of the Continental Express, Mrs.

Aubrey Vair possibly even in pursuit—he always fancied her making the tragedy ridiculous by tearfully bringing additional pairs of socks, and any such trifles he had forgotten, with her—all Reigate and Redhill in commotion. He had never eloped before, and he had visions of difficulties with hotel proprietors. Mrs. Aubrey Vair might telegraph ahead. Even he had had a prophetic vision of a headline in a halfpenny evening newspaper: “Young Lady abducts a Minor Poet.” So there was a quaver in his voice as he asked, “Is it to be flight?”

“As you will,” she answered, still not looking at him.

“I want you to consider particularly how this will affect you. A man,” said Aubrey Vair, slowly, and staring hard at the leaves in his hand, “even gains a certain *éclat* in these affairs. But to a woman it is ruin—social, moral.”

“This is not love,” said the girl in white.

“Ah, my dearest! Think of yourself.”

“Stupid!” she said, under her breath.

“You spoke?”

“Nothing.”

“But cannot we go on, meeting one another, loving one another, without any great scandal or misery? Could we not——”

“That,” interrupted Miss Smith, “would be unspeakably horrible.”

“This is a dreadful conversation to me. Life is so intricate, such a web of subtle strands binds us this way and that. I cannot tell what is right. You must consider——”

“A man would break such strands.”

“There is no manliness,” said Aubrey Vair, with a sudden glow of moral exaltation, “in doing wrong. My love——”

“We could at least die together, dearest,” she said.

“Good Lord!” said Aubrey Vair. “I mean—consider my wife.”

“You have not considered her hitherto.”

“There is a flavour—of cowardice, of desertion, about suicide,” said Aubrey Vair. “Frankly, I have the English prejudice, and do not like any kind of running away.”

Miss Smith smiled very faintly. “I see clearly now what I did not see. My love and yours are very different things.”

“Possibly it is a sexual difference,” said Aubrey Vair; and then, feeling the remark inadequate, he relapsed into silence.

They sat for some time without a word. The two lights in Reigate below multiplied to a score of bright points, and, above, one star had become visible. She began laughing, an almost noiseless, hysterical laugh that jarred unaccountably upon Aubrey Vair.

Presently she stood up. “They will wonder where I am,” she said. “I think I must be going.”

He followed her to the road. “Then this is the end?” he said, with a curious mixture of relief and poignant regret.

"Yes, this is the end," she answered, and turned away.

There straightway dropped into the soul of Aubrey Vair a sense of infinite loss. It was an altogether new sensation. She was perhaps twenty yards away, when he groaned aloud with the weight of it, and suddenly began running after her with his arms extended.

"Annie," he cried—"Annie! I have been talking *rot*. Annie, now I know I love you! I cannot spare you. This must not be. I did not understand."

The weight was horrible.

"Oh, stop, Annie!" he cried with a breaking voice, and there were tears on his face.

She turned upon him suddenly, and his arms fell by his side. His expression changed at the sight of her pale face.

"You do not understand," she said. "I have said good-bye."

She looked at him; he was evidently greatly distressed, a little out of breath, and he had just stopped blubbering. His contemptible quality reached the pathetic. She came up close to him, and, taking his damp Byronic visage between her hands, she kissed him again and again. "Good-bye, little man that I loved," she said; "and good-bye to this folly of love."

Then, with something that may have been a laugh or a sob—she herself, when she came to write it all in her novel, did not know which—she turned and hurried away again, and went out of the path that Aubrey Vair must pursue, at the cross-roads.

Aubrey Vair stood, where she had kissed him, with a mind as inactive as his body, until her white dress had disappeared. Then he gave an involuntary sigh, a large exhaustive expiration, and so awoke himself, and began walking, pensively dragging his feet through the dead leaves, home. Emotions are terrible things.

"Do you like the potatoes, dear?" asked Mrs. Aubrey Vair at dinner. "I cooked them myself."

Aubrey Vair descended slowly from cloudy, impalpable meditations to the level of fried potatoes. "These potatoes"—he remarked, after a pause during which he was struggling with recollection. "Yes. These potatoes have exactly the tints of the dead leaves of the hazel."

"What a fanciful poet it is!" said Mrs. Aubrey Vair. "Taste them. They are very nice potatoes indeed."

STORY THIRTY-ONE

A CATASTROPHE

THE little shop was not paying. The realisation came insensibly. Winslow was not the man for definite addition and subtraction and sudden discovery. He became aware of the truth in his mind gradually, as though it had always been there. A lot of facts had converged and led him there. There was that line of cretonnes—four half-pieces—untouched, save for half a yard sold to cover a stool. There were those shirtings at 4½d.—Bandersnatch, in the Broadway, was selling them at 2½d.—under cost, in fact. (Surely Bandersnatch might let a man live!) Those servants' caps, a selling line, needed replenishing, and that brought back the memory of Winslow's sole wholesale dealers, Helter, Skelter, & Grab. Why! how about their account?

Winslow stood with a big green box open on the counter before him when he thought of it. His pale grey eyes grew a little rounder; his pale, struggling moustache twitched. He had been drifting along, day after day. He went round to the ramshackle cash-desk in the corner—it was Winslow's weakness to sell his goods over the counter, give his customers a duplicate bill, and then dodge into the desk to receive the money, as though he doubted his own honesty. His lank forefinger, with the prominent joints, ran down the bright little calendar ("Clack's Cottons last for All Time"). "One—two—three; three weeks an' a day!" said Winslow, staring. "March! Only three weeks and a day. It *can't* be."

"Tea, dear," said Mrs. Winslow, opening the door with the glass window and the white blind that communicated with the parlour.

"One minute," said Winslow, and began unlocking the desk.

An irritable old gentleman, very hot and red about the face, and in a heavy fur-lined coat, came in noisily. Mrs. Winslow vanished.

"Ugh!" said the old gentleman. "Pocket-handkerchief."

"Yes, sir," said Winslow. "About what price?"—

"Ugh!" said the old gentleman. "Poggit-handkerchief, quig!"

Winslow began to feel flustered. He produced two boxes.

"These, sir"—began Winslow.

"Sheed tin!" said the old gentleman, clutching the stiffness of the linen. "Wad to blow my nose—not haggit about."

"A cotton one, p'raps, sir?" said Winslow.

"How much?" said the old gentleman over the handkerchief.

"Sevenpence, sir. There's nothing more I can show you? No ties, braces——?"

"Damn!" said the old gentleman, fumbling in his ticket-pocket, and finally producing half a crown. Winslow looked round for his metallic duplicate-book which he kept in various fixtures, according to circumstances, and then he caught the old gentleman's eye. He went straight to the desk at once and got the change, with an entire disregard of the routine of the shop.

Winslow was always more or less excited by a customer. But the open desk reminded him of his trouble. It did not come back to him all at once. He heard a finger-nail softly tapping on the glass, and, looking up, saw Minnie's eyes over the blind. It seemed like retreat opening. He shut and locked the desk, and went into the back room to tea.

But he was preoccupied. Three weeks and a day! He took unusually large bites of his bread-and-butter and stared hard at the little pot of jam. He answered Minnie's conversational advances distractedly. The shadow of Helter, Skelter, & Grab lay upon the tea-table. He was struggling with this new idea of failure, the tangible realisation that was taking shape and substance, condensing, as it were, out of the misty uneasiness of many days. At present it was simply one concrete fact; there were thirty-nine pounds left in the bank, and that day three weeks Messrs. Helter, Skelter, & Grab, those enterprising outfitters of young men, would demand their eighty pounds.

After tea there was a customer or so—small purchases: some muslin and buckram, dress-protectors, tape, and a pair of Lisle hose. Then, knowing that Black Care was lurking in the dusky corners of the shop, he lit the three lamps early and set to, refolding his cotton prints, the most vigorous and least meditative proceeding of which he could think. He could see Minnie's shadow in the other room as she moved about the table. She was busy turning an old dress. He had a walk after supper, looked in at the Y.M.C.A., but found no one to talk to, and finally went to bed. Minnie was already there. And there, too, waiting for him, nudging him gently, until about midnight he was hopelessly awake, sat Black Care.

He had had one or two nights lately in that company, but this was much worse. First came Messrs. Helter, Skelter, & Grab, and their demand for eighty pounds—an enormous sum when your original capital was only a hundred and seventy. They camped, as it were, before him, sat down and beleaguered him. He clutched feebly at the circumambient darkness for expedients. Suppose he had a sale, sold things for almost anything? He tried to imagine a sale miraculously successful in some unexpected manner, and mildly profitable, in spite of reductions below cost. Then Bandersnatch Limited, 101, 102, 103, 105, 106, 107 Broadway, joined the siege, a long caterpillar of frontage, a battery of shop fronts, wherein things were sold at a farthing above cost. How could he fight such

an establishment? Besides, what had he to sell? He began to review his resources. What taking line was there to bait the sale? Then straightway came those pieces of cretonne, yellow and black, with a bluish-green flower; those discredited shirtings, prints without buoyancy, skirmishing haberdashery, some despairful four-button gloves by an inferior maker—a hopeless crew. And that was his force against Bandersnatch, Helter, Skelter, & Grab, and the pitiless world behind them. Whatever had made him think a mortal would buy such things? Why had he bought this and neglected that? He suddenly realised the intensity of his hatred for Helter, Skelter, & Grab's salesman. Then he drove towards an agony of self-reproach. He had spent too much on that cash-desk. What real need was there of a desk? He saw his vanity of that desk in a lurid glow of self-discovery. And the lamps? Five pounds! Then suddenly, with what was almost physical pain, he remembered the rent.

He groaned and turned over. And there, dim in the darkness, was the hummock of Mrs. Winslow's shoulder. That set him off in another direction. He became acutely sensible of Minnie's want of feeling. Here he was, worried to death about business, and she sleeping like a little child. He regretted having married, with that infinite bitterness that only comes to the human heart in the small hours of the morning. That hummock of white seemed absolutely without helpfulness, a burden, a responsibility. What fools men were to marry! Minnie's inert repose irritated him so much that he was almost provoked to wake her up and tell her that they were "Ruined." She would have to go back to her uncle; her uncle had always been against him: and as for his own future, Winslow was exceedingly uncertain. A shop assistant who has once set up for himself finds the utmost difficulty in getting into a situation again. He began to figure himself "crib-hunting" once more, going from this wholesale house to that, writing innumerable letters. How he hated writing letters! "Sir,—Referring to your advertisement in the *Christian World*." He beheld an infinite vista of discomfort and disappointment, ending—in a gulf.

He dressed, yawning, and went down to open the shop. He felt tired before the day began. As he carried the shutters in, he kept asking himself what good he was doing. The end was inevitable, whether he bothered or not. The clear daylight smote into the place, and showed how old and rough and splintered was the floor, how shabby the second-hand counter, how hopeless the whole enterprise. He had been dreaming these past six months of a bright shop, of a happy couple, of a modest but comely profit flowing in. He had suddenly awakened from his dream. The braid that bound his decent black coat—it was a trifle loose—caught against the catch of the shop door, and was torn away. This suddenly turned his

wretchedness to wrath. He stood quivering for a moment, then, with a spiteful clutch, tore the braid looser, and went in to Minnie.

"Here," he said, with infinite reproach; "look here! You might look after a chap a bit."

"I didn't see it was torn," said Minnie.

"You never do," said Winslow, with gross injustice, "until things are too late."

Minnie looked suddenly at his face. "I'll sew it now, Sid, if you like."

"Let's have breakfast first," said Winslow, "and do things at their proper time."

He was preoccupied at breakfast, and Minnie watched him anxiously. His only remark was to declare his egg a bad one. It wasn't; it was flavoury—being one of those at fifteen a shilling—but quite nice. He pushed it away from him, and then, having eaten a slice of bread-and-butter, admitted himself in the wrong by resuming the egg.

"Sid," said Minnie, as he stood up to go into the shop again, "you're not well."

"I'm *weli* enough." He looked at her as though he hated her.

"Then there's something else the matter. You aren't angry with me, Sid, are you, about that braid? Do tell me what's the matter. You were just like this at tea yesterday, and at supper-time. It wasn't the braid then."

"And I'm likely to be."

She looked interrogation. "Oh, what is the matter?" she said.

It was too good a chance to miss, and he brought the evil news out with dramatic force. "Matter?" he said. "I done my best, and here we are. That's the matter! If I can't pay Helter, Skelter, & Grab eighty pounds, this day three weeks"—pause—"we shall be sold up! Sold up! That's the matter, Min! SOLD UP!"

"Oh, Sid!" began Minnie.

He slammed the door. For the moment he felt relieved of at least half his misery. He began dusting boxes that did not require dusting and then reblocked a cretonne already faultlessly blocked. He was in a state of grim wretchedness; a martyr under the harrow of fate. At any rate, it should not be said he failed for want of industry. And how he had planned and contrived and worked! All to this end! He felt horrible doubts. Providence and Bandersnatch—surely they were incompatible! Perhaps he was being "tried"? That sent him off upon a new tack, a very comforting one. The martyr pose, the gold-in-the-furnace attitude, lasted all the morning.

At dinner—"potato pie"—he looked up suddenly, and saw Minnie's face regarding him. Pale she looked, and a little red

about the eyes. Something caught him suddenly with a queer effect upon his throat. All his thoughts seemed to wheel round into quite a new direction.

He pushed back his plate and stared at her blankly. Then he got up, went round the table to her—she staring at him. He dropped on his knees beside her without a word. "Oh, Minnie!" he said, and suddenly she knew it was peace, and put her arms about him, as he began to sob and weep.

He cried like a little boy, slobbering on her shoulder that he was a knave to have married her and brought her to this, that he hadn't the wits to be trusted with a penny, that it was all his fault, that he "*had hoped so*"—ending in a howl. And she, crying gently herself, patting his shoulders, said "*Ssh!*" softly to his noisy weeping, and so soothed the outbreak. Then suddenly the crazy bell upon the shop door began, and Winslow had to jump to his feet, and be a man again.

After that scene they "talked it over" at tea, at supper, in bed, at every possible interval in between, solemnly—quite inconclusively—with set faces and eyes for the most part staring in front of them—and yet with a certain mutual comfort. "What to do I don't know," was Winslow's main proposition. Minnie tried to take a cheerful view of service—with a probable baby. But she found she needed all her courage. And her uncle would help her again, perhaps, just at the critical time. It didn't do for folks to be too proud. Besides, "something might happen," a favourite formula with her.

One hopeful line was to anticipate a sudden afflux of customers. "Perhaps," said Minnie, "you might get together fifty. They know you well enough to trust you a bit." They debated that point. Once the possibility of Helter, Skelter, & Grab giving credit was admitted, it was pleasant to begin sweating the acceptable minimum. For some half-hour over tea the second day after Winslow's discoveries they were quite cheerful again, laughing even at their terrific fears. Even twenty pounds to go on with might be considered enough. Then in some mysterious way the pleasant prospect of Messrs. Helter, Skelter, & Grab tempering the wind to the shorn retailer vanished—vanished absolutely, and Winslow found himself again in the pit of despair.

He began looking about at the furniture, and wondering idly what it would fetch. The chiffonier was good, anyhow, and there were Minnie's old plates that her mother used to have. Then he began to think of desperate expedients for putting off the evil day. He had heard somewhere of Bills of Sale—there was to his ears something comfortingly substantial in the phrase. Then, why not "Go to the Money-Lenders"?

One cheering thing happened on Thursday afternoon, a little girl came in with a pattern of "print," and he was able to match it. He had not been able to match anything out of his meagre stock before. He went in and told Minnie. The in-

cident is mentioned lest the reader should imagine it was uniform despair with him.

The next morning, and the next, after the discovery, Winslow opened shop late. When one has been awake most of the night, and has no hope, what is the good of getting up punctually? But as he went into the dark shop on Friday he saw something lying on the floor, something lit by the bright light that came under the ill-fitting door—a black oblong. He stooped and picked up an envelope with a deep mourning edge. It was addressed to his wife. Clearly a death in her family—perhaps her uncle. He knew the man too well to have expectations. And they would have to get mourning and go to the funeral. The brutal cruelty of people dying! He saw it all in a flash—he always visualised his thoughts. Black trousers to get, black crape, black groves—none in stock—the railway fares, the shop closed for the day.

"I'm afraid there's bad news, Minnie," he said.

She was kneeling before the fireplace, blowing the fire. She had her housemaid's gloves on and the old country sun-bonnet she wore of a morning, to keep the dust out of her hair. She turned, saw the envelope, gave a gasp, and pressed two bloodless lips together.

"I'm afraid it's uncle," she said, holding the letter and staring with eyes wide open into Winslow's face. "*It's a strange hand!*"

"The postmark's Hull," said Winslow.

"The postmark's Hull."

Minnie opened the letter slowly, drew it out, hesitated, turned it over, saw the signature. "It's Mr. Speight!"

"What does he say?" said Winslow.

Minnie began to read. "*Oh!*" she screamed. She dropped the letter, collapsed into a crouching heap, her hands covering her eyes. Winslow snatched at it. "A most terrible accident has occurred," he read; "Melchior's chimney fell down yesterday evening right on the top of your uncle's house, and every living soul was killed—your uncle, your cousin Mary, Will and Ned, and the girl—every one of them, and smashed—you would hardly know them. I'm writing to you to break the news before you see it in the papers——" The letter fluttered from Winslow's fingers. He put out his hand against the mantel to steady himself.

All of them dead! Then he saw, as in a vision, a row of seven cottages, each let at seven shillings a week, a timber yard, two villas, and the ruins—still marketable—of the avuncular residence. He tried to feel a sense of loss and could not. They were sure to have been left to Minnie's aunt. All dead! $7 \times 7 \times 52 \div 20$ began insensibly to work itself out in his mind, but discipline was ever weak in his mental arithmetic; figures kept moving from one line to another, like children playing at Widdy, Widdy Way. Was it two hundred pounds about—or

one hundred pounds? Presently he picked up the letter again, and finishing reading it. "You being the next of kin," said Mr. Speight.

"How *awful*!" said Minnie in a horrorstruck whisper, and looking up at last. Winslow stared back at her, shaking his head solemnly. There were a thousand things running through his mind, but none that, even to his dull sense, seemed appropriate as a remark. "It was the Lord's will," he said at last.

"It seems so very, very terrible," said Minnie; "auntie, dear auntie—Ted—poor, dear uncle——"

"It was the Lord's will, Minnie," said Winslow, with infinite feeling. A long silence.

"Yes," said Minnie, very slowly, staring thoughtfully at the crackling black paper in the grate. The fire had gone out. "Yes, perhaps it was the Lord's will."

They looked gravely at one another. Each would have been terribly shocked at any mention of the property by the other. She turned to the dark fireplace and began tearing up an old newspaper slowly. Whatever our losses may be, the world's work still waits for us. Winslow gave a deep sigh and walked in a hushed manner towards the front door. As he opened it, a flood of sunlight came streaming into the dark shadows of the closed shop. Bandersnatch, Helter, Skelter, & Grab, had vanished out of his mind like the mists before the rising sun.

Presently he was carrying in the shutters, and in the briskest way, the fire in the kitchen was crackling exhilaratingly, with a little saucepan walloping above it, for Minnie was boiling two eggs—one for herself this morning, as well as one for him—and Minnie herself was audible, laying breakfast with the greatest *éclat*. The blow was a sudden and terrible one—but it behoves us to face such things bravely in this sad, unaccountable world. It was quite midday before either of them mentioned the cottages.

STORY THIRTY-TWO

THE LOST INHERITANCE

"My uncle," said the man with the glass eye, "was what you might call a hemi-semi-demi millionaire. He was worth about a hundred and twenty thousand. Quite. And he left me all his money."

I glanced at the shiny sleeve of his coat, and my eye travelled up to the frayed collar.

"Every penny," said the man with the glass eye, and I caught the active pupil looking at me with a touch of offence.

"I've never had any windfalls like that," I said, trying to speak enviously and propitiate him.

"Even a legacy isn't always a blessing," he remarked with a sigh, and with an air of philosophical resignation he put the red nose and the wiry moustache into his tankard for a space.

"Perhaps not," I said.

"He was an author, you see, and he wrote a lot of books."

"Indeed !"

"That was the trouble of it all." He stared at me with the available eye to see if I grasped his statement, then averted his face a little and produced a toothpick.

"You see," he said, smacking his lips after a pause, "it was like this. He was my uncle—my maternal uncle. And he had—what shall I call it?—a weakness for writing edifying literature. Weakness is hardly the word—downright mania is nearer the mark. He'd been librarian in a Polytechnic, and as soon as the money came to him he began to indulge his ambition. It's a simply extraordinary and incomprehensible thing to me. Here was a man of thirty-seven suddenly dropped into a perfect pile of gold, and he didn't go—not a day's bust on it. One would think a chap would go and get himself dressed a bit decent—say a couple of dozen pairs of trousers at a West End tailor's; but he never did. You'd hardly believe it, but when he died he hadn't even a gold watch. It seems wrong for people like that to have money. All he did was just to take a house, and order in pretty nearly five tons of books and ink and paper, and set to writing edifying literature as hard as ever he could write. I *can't* understand it! But he did. The money came to him, curiously enough, through a maternal uncle of *his*, unexpected like, when he was seven-and-thirty. My mother, it happened, was his only relation in the wide, wide world, except some second cousins of his. And I was her only son. You follow all that? The second cousins had one only son too, but they brought him to see the old man too soon. He was rather a spoilt youngster, was this son of theirs, and directly he set eyes on my uncle, he began

bawling out as hard as he could. 'Take 'im away—er,' he says, 'take 'im away,' and so did for himself entirely. It was pretty straight sailing, you'd think, for me, eh? And my mother, being a sensible, careful woman, settled the business in her own mind long before he did.

"He was a curious little chap, was my uncle, as I remember him. I don't wonder at the kid being scared. Hair, just like these Japanese dolls they sell, black and straight and stiff all round the brim and none in the middle, and below, a whitish kind of face and rather large dark grey eyes moving about behind his spectacles. He used to attach a great deal of importance to dress, and always wore a flapping overcoat and a big-brimmed felt hat of a most extraordinary size. He looked a rummy little beggar, I can tell you. Indoors it was, as a rule, a dirty red flannel dressing-gown and a black skull-cap he had. That black skull-cap made him look like the portraits of all kinds of celebrated people. He was always moving about from house to house, was my uncle, with his chair which had belonged to Savage Landor, and his two writing-tables, one of Carlyle's and the other of Shelley's, so the dealer told him, and the completest portable reference library in England, he said he had—and he lugged the whole caravan, now to a house at Down, near Darwin's old place, then to Reigate, near Meredith, then off to Haslemere, then back to Chelsea for a bit, and then up to Hampstead. He knew there was something wrong with his stuff, but he never knew there was anything wrong with his brains. It was always the air, or the water, or the altitude, or some tommy-rot like that. 'So much depends on environment,' he used to say, and stare at you hard, as if he half suspected you were hiding a grin at him somewhere under your face. 'So much depends on environment to a sensitive mind like mine.'

"What was his name? You wouldn't know it if I told you. He wrote nothing that any one has ever read—nothing. No one *could* read it. He wanted to be a great teacher, he said, and he didn't know what he wanted to teach any more than a child. So he just blethered at large about Truth and Righteousness, and the Spirit of History, and all that. Book after book he wrote and published at his own expense. He wasn't quite right in his head, you know, really; and to hear him go on at the critics—not because they slated him, mind you—he liked that—but because they didn't take any notice of him at all. 'What do the nations want?' he would ask, holding out his brown old claw. 'Why, teaching—guidance! They are scattered upon the hills like sheep without a shepherd. There is War and Rumours of War, the unlaidd Spirit of Discord abroad in the land, Nihilism, Vivisection, Vaccination, Drunkenness, Penury, Want, Socialistic Error, Selfish Capital! Do you see the clouds, Ted?'—My name, you know—'Do you see the clouds lowering over the land? and behind it all

—the Mongol waits ! ’ He was always very great on Mongols, and the Spectre of Socialism, and such-like things.

“ Then out would come his finger at me, and with his eyes all afire and his skull-cap askew, he would whisper : ‘ And here am I. What do I want ? Nations to teach. Nations ! I say it with all modesty, Ted, I *could*. I would guide them ; nay ! but I *will* guide them to a safe haven, to the land of Righteousness, flowing with milk and honey.’ ”

“ That’s how he used to go on. Ramble, rave about the nations, and righteousness, and that kind of thing. Kind of mincemeat of Bible and blethers. From fourteen up to three-and-twenty, when I might have been improving my mind, my mother used to wash me and brush my hair (at least in the earlier years of it), with a nice parting down the middle, and take me, once or twice a week, to hear this old lunatic jabber about things he had read of in the morning papers, trying to do it as much like Carlyle as he could, and I used to sit according to instructions, and look intelligent and nice, and pretend to be taking it all in. Afterwards I used to go of my own free will, out of a regard for the legacy. I was the only person that used to go and see him. He wrote, I believe, to every man who made the slightest stir in the world, sending him a copy or so of his books, and inviting him to come and talk about the nations to him ; but half of them didn’t answer, and none ever came. And when the girl let you in—she was an artful bit of goods, that girl—there were heaps of letters on the hall-seat waiting to go off, addressed to Prince Bismarck, the President of the United States, and such-like people. And one went up the staircase and along the cobwebby passage—the house-keeper drank like fury, and his passages were always cobwebby—and found him at last, with books turned down all over the room, and heaps of torn paper on the floor, and telegrams and newspapers littered about, and empty coffee-cups and half-eaten bits of toast on the desk and the mantel. You’d see his back humped up, and his hair would be sticking out quite straight between the collar of that dressing-gown thing and the edge of the skull-cap.

“ ‘ A moment ! ’ he would say. ‘ A moment ! ’ over his shoulder. ‘ The *mot juste*, you know, Ted, *le mot juste*. Righteous thought righteously expressed—Aah !—concatenation. And now, Ted,’ he’d say, spinning round in his study chair, ‘ how’s Young England ? ’ That was his silly name for me.

“ Well, that was my uncle, and that was how he talked—to me, at any rate. With others about he seemed a bit shy. And he not only talked to me, but he gave me his books, books of six hundred pages or so, with cock-eyed headings, ‘ The Shrieking Sisterhood,’ ‘ The Behemoth of Bigotry,’ ‘ Crucibles and Cullenders,’ and so on. All very strong, and none of them original. The very last time but one that I saw him, he gave

me a book. He was feeling ill even then, and his hand shook and he was despondent. I noticed it because I was naturally on the look-out for those little symptoms. 'My last book, Ted,' he said. 'My last book, my boy; my last word to the deaf and hardened nations'; and I'm hanged if a tear didn't go rolling down his yellow old cheek. He was regular crying because it was so nearly over, and he hadn't only written about fifty-three books of rubbish. 'I've sometimes thought, Ted'—he said, and stopped.

"Perhaps I've been a bit hasty and angry with this stiff-necked generation. A little more sweetness, perhaps, and a little less blinding light. I've sometimes thought—I might have swayed them. But I've done my best, Ted.'

"And then, with a burst, for the first and last time in his life he owned himself a failure. It showed he was really ill. He seemed to think for a minute, and then he spoke quietly and low, as sane and sober as I am now. 'I've been a fool, Ted,' he said. 'I've been flapping nonsense all my life. Only He who readeth the heart knows whether this is anything more than vanity. Ted, I don't. But He knows, He knows, and if I have done foolishly and vainly, in my heart—in my heart——'

"Just like that he spoke, repeating himself, and he stopped quite short and handed the book to me, trembling. Then the old shine came back into his eye. I remember it all fairly well, because I repeated it and acted it to my old mother when I got home, to cheer her up a bit. 'Take this book and read it,' he said. 'It's my last word, my very last word. I've left all my property to you, Ted, and may you use it better than I have done.' And then he fell a-coughing.

"I remember that quite well even now, and how I went home cock-a-hoop, and how he was in bed the next time I called. The housekeeper was downstairs drunk, and I fooled about—as a young man will—with the girl in the passage before I went to him. He was sinking fast. But even then his vanity clung to him.

"'Have you read it?' he whispered.

"'Sat up all night reading it,' I said in his ear to cheer him. 'It's the last,' said I, and then, with a memory of some poetry or other in my head, 'but it's the bravest and best.'

He smiled a little and tried to squeeze my hand as a woman might do, and left off squeezing in the middle, and lay still. 'The bravest and the best,' said I again, seeing it pleased him. But he didn't answer. I heard the girl giggle outside the door, for occasionally we'd had just a bit of innocent laughter, you know, at his ways. I looked at his face, and his eyes were closed, and it was just as if somebody had punched in his nose on either side. But he was still smiling. It's queer to think of—he lay dead, lay dead there, an utter failure, with the smile of success on his face.

"That was the end of my uncle. You can imagine me and my mother saw that he had a decent funeral. Then, of course, came the hunt for the will. We began decent and respectful at first, and before the day was out we were ripping chairs, and smashing bureau panels, and sounding walls. Every hour we expected those others to come in. We asked the housekeeper, and found she'd actually witnessed a will—on an ordinary half-sheet of notepaper it was written, and very short, she said—not a month ago. The other witness was the gardener, and he bore her out word for word. But I'm hanged if there was that or any other will to be found. The way my mother talked must have made him turn in his grave. At last a lawyer at Reigate sprang one on us that had been made years ago during some temporary quarrel with my mother. I'm blest if that wasn't the only will to be discovered anywhere, and it left every penny he possessed to that 'Take 'im away' youngster of his second cousin's—a chap who'd never had to stand his talking not for one afternoon of his life."

The man with the glass eye stopped.

"I thought you said——" I began.

"Half a minute," said the man with the glass eye. "I had to wait for the end of the story till this very morning, and I was a blessed sight more interested than you are. You just wait a bit too. They executed the will, and the other chap inherited, and directly he was one-and-twenty he began to blow it. How he did blow it, to be sure! He bot, he drank, he got in the papers for this and that. I tell you, it makes me wriggle to think of the times he had. He blew every ha'penny of it before he was thirty, and the last I heard of him was—Holloway! Three years ago.

"Well, I naturally fell on hard times, because, as you see, the only trade I knew was legacy-cadging. All my plans were waiting over to begin, so to speak, when the old chap died. I've had my ups and downs since then. Just now it's a period of depression. I tell you frankly, I'm on the look-out for help. I was hunting round my room to find something to raise a bit on for immediate necessities, and the sight of all those presentation volumes—no one will buy them, not to wrap butter in, even—well, they annoyed me. I'd promised him not to part with them, and I never kept a promise easier. I let out at them with my boot, and sent them shooting across the room. One lifted at the kick, and spun through the air. And out of it flapped—— You guess?

"It was the will. He'd given it me himself in that very last volume of all."

He folded his arms on the table, and looked sadly with the active eye at his empty tankard. He shook his head slowly, and said softly, "I'd never *opened* the book, much more cut a page!" Then he looked up, with a bitter laugh, for my sympathy. "Fancy hiding it there! Eigh? Of all places."

He began to fish absently for a dead fly with his finger. "It just shows you the vanity of authors," he said, looking up at me. "It wasn't no trick of his. He'd meant perfectly fair. He'd really thought I was really going home to read that blessed book of his through. But it shows you, don't it?"—his eye went down to the tankard again—"it shows you, too, how we poor human beings fail to understand one another."

But there was no misunderstanding the eloquent thirst of his eye. He accepted with ill-feigned surprise. He said, in the usual subtle formula, that he didn't mind if he did.

STORY THIRTY-THREE

THE SAD STORY OF A DRAMATIC CRITIC

I WAS—you shall hear immediately why I am not now—Egbert Craddock Cummins. The name remains. I am still (Heaven help me !) Dramatic Critic to the *Fiery Cross*. What I shall be in a little while I do not know. I write in great trouble and confusion of mind. I will do what I can to make myself clear in the face of terrible difficulties. You must bear with me a little. When a man is rapidly losing his own identity, he naturally finds a difficulty in expressing himself. I will make it perfectly plain in a minute, when once I get my grip upon the story. Let me see—where *am* I ? I wish I knew. Ah, I have it ! Dead self ! Egbert Craddock Cummins !

In the past I should have disliked writing anything quite so full of “I” as this story must be. It is full of “I’s” before and behind, like the beast in Revelation—the one with a head like a calf, I am afraid. But my tastes have changed since I became a Dramatic Critic and studied the masters—G.R.S., G.B.S., G.A.S., and the others. Everything has changed since then. At least the story is about myself—so that there is some excuse for me. And it is really not egotism, because, as I say, since those days my identity has undergone an entire alteration.

That past ! . . . I was—in those days—rather a nice fellow, rather shy—taste for grey in my clothes, weedy little moustache, face “interesting,” slight stutter which I had caught in early life from a schoolfellow. Engaged to a very nice girl, named Delia. Fairly new, she was—cigarettes—liked me because I was human and original. Considered I was like Lamb—on the strength of the stutter, I believe. Father, an eminent authority on postage stamps. She read a great deal in the British Museum. (A perfect pairing ground for literary people, that British Museum—you should read George Egerton and Justin Huntly McCarthy and Gissing and the rest of them.) We loved in our intellectual way, and shared the brightest hopes. (All gone now.) And her father liked me because I seemed honestly eager to hear about stamps. She had no mother. Indeed, I had the happiest prospects a young man could have. I never went to theatres in those days. My Aunt Charlotte before she died had told me not to.

Then Barnaby, the editor of the *Fiery Cross*, made me—in spite of my spasmodic efforts to escape—Dramatic Critic. He is a fine, healthy man, Barnaby, with an enormous head of frizzy black hair and a convincing manner, and he caught me on the staircase going to see Wembly. He had been dining, and was more than usually buoyant. “Hullo, Cummins !” he

said. "The very man I want!" He caught me by the shoulder or the collar or something, ran me up the little passage, and flung me over the waste-paper basket into the arm-chair in his office. "Pray be seated," he said, as he did so. Then he ran across the room and came back with some pink and yellow tickets and pushed them into my hand. "Opera Comique," he said, "Thursday; Friday, the Surrey; Saturday, the Frivolity. That's all, I think."

"But"—I began.

"Glad you're free," he said, snatching some proofs off the desk and beginning to read.

"I don't quite understand," I said.

"*Eigh*?" he said, at the top of his voice, as though he thought I had gone, and was startled at my remark.

"Do you want me to criticise these plays?"

"Do something with 'em. . . . Did you think it was a treat?"

"But I can't."

"Did you call me a fool?"

"Well, I've never been to a theatre in my life."

"Virgin soil."

"But I don't know anything about it, you know."

"That's just it. New view. No habits. No *clichés* in stock. Ours is a live paper, not a bag of tricks. None of your clockwork professional journalism in this office. And I can rely on your integrity"—

"But I've conscientious scruples"—

He caught me up suddenly and put me outside his door. "Go and talk to Wembly about that," he said. "He'll explain."

As I stood perplexed, he opened the door again, said, "I forgot this," thrust a fourth ticket into my hand (it was for that night—in twenty minutes' time) and slammed the door upon me. His expression was quite calm, but I caught his eye.

I hate arguments. I decided that I would take his hint and become (to my own destruction) a Dramatic Critic. I walked slowly down the passage to Wembly. That Barnaby has a remarkably persuasive way. He has made few suggestions during our very pleasant intercourse of four years that he has not ultimately won me round to adopting. It may be, of course, that I am of a yielding disposition; certainly I am too apt to take my colour from my circumstances. It is, indeed, to my unfortunate susceptibility to vivid impressions that all my misfortunes are due. I have already alluded to the slight stammer I had acquired from a schoolfellow in my youth. However, this is a digression. . . . I went home in a cab to dress.

I will not trouble the reader with my thoughts about the first-night audience, strange assembly as it is—those I reserve for my Memoirs—nor the humiliating story of how I got lost during the *entr'acte* in a lot of red plush passages, and saw the

third act from the gallery. The only point upon which I wish to lay stress was the remarkable effect of the acting upon me. You must remember I had lived a quiet and retired life, and had never been to the theatre before, and that I am extremely sensitive to vivid impressions. At the risk of repetition I must insist upon these points.

The first effect was a profound amazement, not untinctured by alarm. The phenomenal unnaturalness of acting is a thing discounted in the minds of most people by early visits to the theatre. They get used to the fantastic gestures, the flamboyant emotions, the weird mouthings, melodious snortings, agonising yelps, lip-gnawings, glaring horrors, and other emotional symbolism of the stage. It becomes at last a mere deaf-and-dumb language to them, which they read intelligently *pari passu* with the hearing of the dialogue. But all this was new to me. The thing was called a modern comedy, the people were supposed to be English and were dressed like fashionable Americans of the current epoch, and I fell into the natural error of supposing that the actors were trying to represent human beings. I looked round on my first-night audience with a kind of wonder, discovered—as all new Dramatic Critics do—that it rested with me to reform the Drama, and, after a supper choked with emotion, went off to the office to write a column, piebald with “new paragraphs” (as all my stuff is—it fills out so) and purple with indignation. Barnaby was delighted.

But I could not sleep that night. I dreamt of actors—actors glaring, actors smiting their chests, actors flinging out a handful of extended fingers, actors smiling bitterly, laughing despairingly, falling hopelessly, dying idiotically. I got up at eleven with a slight headache, read my notice in the *Fiery Cross*, breakfasted, and went back to my room to shave. (It’s my habit to do so.) Then an odd thing happened. I could not find my razor. Suddenly it occurred to me that I had not unpacked it the day before.

“Ah!” said I, in front of the looking-glass. Then “Hullo!”

Quite involuntarily, when I had thought of my portmanteau, I had flung up the left arm (fingers fully extended) and clutched at my diaphragm with my right hand. I am an acutely self-conscious man at all times. The gesture struck me as absolutely novel for me. I repeated it, for my own satisfaction. “Odd!” Then (rather puzzled) I turned to my portmanteau.

After shaving, my mind reverted to the acting I had seen, and I entertained myself before the cheval glass with some imitations of Jafferay’s more exaggerated gestures. “Really, one might think it a disease,” I said—“Stage-Walkitis!” (There’s many a truth spoken in jest.) Then, if I remember rightly, I went off to see Wembly, and afterwards lunched at the British Museum with Delia. We actually spoke about our prospects, in the light of my new appointment.

But that appointment was the beginning of my downfall. From that day I necessarily became a persistent theatre-goer, and almost insensibly I began to change. The next thing I noticed after the gesture about the razor, was to catch myself bowing ineffably when I met Delia, and stooping in an old-fashioned, courtly way over her hand. Directly I caught myself, I straightened myself up and became very uncomfortable. I remember she looked at me curiously. Then, in the office, I found myself doing "nervous business," fingers on teeth, when Barnaby asked me a question I could not very well answer. Then, in some trifling difference with Delia, I clasped my hand to my brow. And I pranced through my social transactions at times singularly like an actor! I tried not to—no one could be more keenly alive to the arrant absurdity of the histrionic bearing. And I did!

It began to dawn on me what it all meant. The acting, I saw, was too much for my delicately-strung nervous system. I have always, I know, been too amenable to the suggestions of my circumstances. Night after night of concentrated attention to the conventional attitudes and intonation of the English stage was gradually affecting my speech and carriage. I was giving way to the infection of sympathetic imitation. Night after night my plastic nervous system took the print of some new amazing gesture, some new emotional exaggeration—and retained it. A kind of theatrical veneer threatened to plate over and obliterate my private individuality altogether. I saw myself in a kind of vision. Sitting by myself one night, my new self seemed to me to glide, posing and gesticulating, across the room. He clutched his throat, he opened his fingers, he opened his legs in walking like a high-class marionette. He went from attitude to attitude. He might have been clock-work. Directly after this I made an ineffectual attempt to resign my theatrical work. But Barnaby persisted in talking about the Polywhiddle Divorce all the time I was with him, and I could get no opportunity of saying what I wished.

And then Delia's manner began to change towards me. The ease of our intercourse vanished. I felt she was learning to dislike me. I grinned, and capered, and scowled, and posed at her in a thousand ways, and knew—with what a voiceless agony!—that I did it all the time. I tried to resign again, and Barnaby talked about "X" and "Z" and "Y" in the *New Review*, and gave me a strong cigar to smoke, and so routed me. And then I walked up the Assyrian Gallery in the manner of Irving to meet Delia, and so precipitated the crisis.

"Ah!—*Dear!*" I said, with more sprightliness and emotion in my voice than had ever been in all my life before I became (to my own undoing) a Dramatic Critic.

She held out her hand rather coldly, scrutinising my face as she did so. I prepared, with a new-won grace, to walk by her side.

"Egbert," she said, standing still, and thought. Then she looked at me.

I said nothing. I felt what was coming. I tried to be the old Egbert Craddock Cummins of shambling gait and stammering sincerity, whom she loved, but I felt even as I did so that I was a new thing, a thing of surging emotions and mysterious fixity—like no human being that ever lived, except upon the stage. "Egbert," she said, "you are not yourself."

"Ah!" Involuntarily I clutched my diaphragm and averted my head (as is the way with them).

"There!" she said.

"*What do you mean?*" I said, whispering in vocal italics—you know how they do it—turning on her, perplexity on face, right hand down, left on brow. I knew quite well what she meant. I knew quite well the dramatic unreality of my behaviour. But I struggled against it in vain. "What do you mean?" I said, and, in a kind of hoarse whisper, "I don't understand!"

She really looked as though she disliked me. "What do you keep on posing for?" she said. "I don't like it. You didn't use to."

"Didn't use to!" I said slowly, repeating this twice. I glared up and down the gallery, with short, sharp glances. "We are alone," I said swiftly. "*Listen!*" I poked my forefinger towards her, and glared at her. "I am under a curse."

I saw her hand tighten upon her sunshade. "You are under some bad influence or other," said Delia. "You should give it up. I never knew any one change as you have done."

"Delia!" I said, lapsing into the pathetic. "Pity me. Augh! Delia! *Pit—y* me!"

She eyed me critically. "*Why* you keep playing the fool like this I don't know," she said. "Anyhow, I really cannot go about with a man who behaves as you do. You made us both ridiculous on Wednesday. Frankly, I dislike you, as you are now. I met you here to tell you so—as it's about the only place where we can be sure of being alone together."

"Delia!" said I, with intensity, knuckles of clenched hands white. "You don't mean——"

"I do," said Delia. "A woman's lot is sad enough at the best of time. But with you——"

I clapped my hand on my brow.

"So, good-bye," said Delia, without emotion.

"Oh, Delia!" I said. "Not *this*?"

"Good-bye, Mr. Cummins," she said.

By a violent effort I controlled myself and touched her hand. I tried to say some word of explanation to her. She looked into my working face and winced. "I *must* do it," she said hopelessly. Then she turned from me and began walking rapidly down the gallery.

Heavens! How the human agony cried within me! I loved Delia. But nothing found expression—I was already too deeply crusted with my acquired self.

"Good-baye!" I said at last, watching her retreating figure. How I hated myself for doing it! After she had vanished, I repeated in a dreamy way, "Good-baye!" looking hopelessly round me. Then, with a kind of heart-broken cry, I shook my clenched fists in the air, staggered to the pedestal of a winged figure, buried my face in my arms, and made my shoulders heave. Something within me said "Ass!" as I did so. (I had the greatest difficulty in persuading the Museum policeman, who was attracted by my cry of agony, that I was not intoxicated, but merely suffering from a transient indisposition.)

But even this great sorrow has not availed to save me from my fate. I see it, every one sees it; I grow more "theatrical" every day. And no one could be more painfully aware of the pungent silliness of theatrical ways. The quiet, nervous, but pleasing E. C. Cummins vanishes. I cannot save him. I am driven like a dead leaf before the winds of March. My tailor even enters into the spirit of my disorder. He has a peculiar sense of what is fitting. I tried to get a dull grey suit from him this spring, and he foisted a brilliant blue upon me, and I see he has put braid down the sides of my new dress trousers. My hairdresser insists upon giving me a "wave."

I am beginning to associate with actors. I detest them, but it is only in their company that I can feel I am not glaringly conspicuous. Their talk infects me. I notice a growing tendency to dramatic brevity, to dashes and pauses in my style, to a punctuation of bows and attitudes. Barnaby has remarked it too. I offended Wembly by calling him "Dear Boy" yesterday. I dread the end, but I cannot escape from it.

The fact is, I am being obliterated. Living a grey, retired life all my youth, I came to the theatre a delicate sketch of a man, a thing of tints and faint lines. Their gorgeous colouring has effaced me altogether. People forget how much mode of expression, method of movement, are a matter of contagion. I have heard of stage-struck people before, and thought it a figure of speech. I spoke of it jestingly, as a disease. It is no jest. It is a disease. And I have got it bad! Deep down within me I protest against the wrong done to my personality—unavailingly. For three hours or more a week I have to go and concentrate my attention on some fresh play, and the suggestions of the drama strengthen their awful hold upon me. My manners grow so flamboyant, my passions so professional, that I doubt, as I said at the outset, whether it is really myself that behaves in such a manner. I feel merely the core to this dramatic casing, that grows thicker and presses upon me—me and mine. I feel like King John's abbot in his cope of lead.

I doubt, indeed, whether I should not abandon the struggle

altogether—leave this sad world of ordinary life for which I am so ill-fitted, abandon the name of Cummins for some professional pseudonym, complete my self-effacement, and—a thing of tricks and tatters, of posing and pretence—go upon the stage. It seems my only resort—"to hold the mirror up to Nature." For in the ordinary life, I will confess, no one now seems to regard me as both sane and sober. Only upon the stage, I feel convinced, will people take me seriously. That will be the end of it. I *know* that will be the end of it. And yet . . . I will frankly confess . . . all that marks off your actor from your common man . . . I *detest*. I am still largely of my Aunt Charlotte's opinion, that play-acting is unworthy of a pure-minded man's attention, much more participation. Even now I would resign my dramatic criticism and try a rest. Only I can't get hold of Barnaby. Letters of resignation he never notices. He says it is against the etiquette of journalism to write to your Editor. And when I go to see him, he gives me another big cigar and some strong whisky and soda, and then something always turns up to prevent my explanation.

STORY THIRTY-FOUR

A SLIP UNDER THE MICROSCOPE

OUTSIDE the laboratory windows was a watery-grey fog, and within a close warmth and the yellow light of the green-shaded gas lamps that stood two to each table down its narrow length. On each table stood a couple of glass jars containing the mangled vestiges of the crayfish, mussels, frogs, and guinea-pigs upon which the students had been working, and down the side of the room, facing the windows, were shelves bearing bleached dissections in spirits, surmounted by a row of beautifully executed anatomical drawings in whitewood frames and overhanging a row of cubical lockers. All the doors of the laboratory were panelled with blackboard, and on these were the half-erased diagrams of the previous day's work. The laboratory was empty, save for the demonstrator, who sat near the preparation-room door, and silent, save for a low, continuous murmur, and the clicking of the rocker microtome at which he was working. But scattered about the room were traces of numerous students: hand-bags, polished boxes of instruments, in one place a large drawing covered by newspaper, and in another a prettily bound copy of *News from Nowhere*, a book oddly at variance with its surroundings. These things had been put down hastily as the students had arrived and hurried at once to secure their seats in the adjacent lecture theatre. Deadened by the closed door, the measured accents of the professor sounded as a featureless muttering.

Presently, faint through the closed windows came the sound of the Oratory clock striking the hour of eleven. The clicking of the microtome ceased, and the demonstrator looked at his watch, rose, thrust his hands into his pockets, and walked slowly down the laboratory towards the lecture theatre door. He stood listening for a moment, and then his eye fell on the little volume by William Morris. He picked it up, glanced at the title, smiled, opened it, looked at the name on the fly-leaf, ran the leaves through with his hand, and put it down. Almost immediately the even murmur of the lecturer ceased, there was a sudden burst of pencils rattling on the desks in the lecture theatre, a stirring, a scraping of feet, and a number of voices speaking together. Then a firm footfall approached the door, which began to open, and stood ajar as some indistinctly heard question arrested the newcomer.

The demonstrator turned, walked slowly back past the microtome, and left the laboratory by the preparation-room door. As he did so, first one, and then several students carrying notebooks entered the laboratory from the lecture theatre, and distributed themselves among the little tables, or stood in

a group about the doorway. They were an exceptionally heterogeneous assembly, for while Oxford and Cambridge still recoil from the blushing prospect of mixed classes, the College of Science anticipated America in the matter years ago—mixed socially too, for the prestige of the College is high, and its scholarships, free of any age limit, dredge deeper even than do those of the Scotch universities. The class numbered one-and-twenty, but some remained in the theatre questioning the professor, copying the blackboard diagrams before they were washed off, or examining the special specimens he had produced to illustrate the day's teaching. Of the nine who had come into the laboratory three were girls, one of whom, a little fair woman wearing spectacles and dressed in greyish-green, was peering out of the window at the fog, while the other two, both wholesome-looking, plain-faced schoolgirls, unrolled and put on the brown holland aprons they wore while dissecting. Of the men, two went down the laboratory to their places, one a pallid, dark-bearded man, who had once been a tailor; the other a pleasant-featured, ruddy young man of twenty, dressed in a well-fitting brown suit: young Wedderburn, the son of Wedderburn the eye specialist. The others formed a little knot near the theatre door. One of these, a dwarfed, spectacled figure with a hunch back, sat on a bent wood stool, two others, one a short, dark youngster and the other a flaxen-haired, reddish-complexioned young man, stood leaning side by side against the slate sink, while the fourth stood facing them, and maintained the larger share of the conversation.

This last person was named Hill. He was a sturdily built young fellow, of the same age as Wedderburn; he had a white face, dark grey eyes, hair of an indeterminate colour, and prominent, irregular features. He talked rather louder than was needful, and thrust his hands deeply into his pockets. His collar was frayed and blue with the starch of a careless laundress, his clothes were evidently ready-made, and there was a patch on the side of his boot near the toe. And as he talked or listened to the others, he glanced now and again towards the lecture theatre door. They were discussing the depressing peroration of the lecture they had just heard, the last lecture it was in the introductory course in zoology. "From ovum to ovum is the goal of the higher vertebrata," the lecturer had said in his melancholy tones, and so had neatly rounded off the sketch of comparative anatomy he had been developing. The spectacled hunchback had repeated it with noisy appreciation, had tossed it towards the fair-haired student with an evident provocation, and had started one of those vague, rambling discussions on generalities so unaccountably dear to the student mind all the world over.

"That is our goal, perhaps—I admit it, as far as science goes," said the fair-haired student, rising to the challenge. "But there are things above science."

"Science," said Hill confidently, "is systematic knowledge. Ideas that don't come into the system—must anyhow—be loose ideas." He was not quite sure whether that was a clever saying or a fatuity until his hearers took it seriously.

"The thing I cannot understand," said the hunchback, at large, "is whether Hill is a materialist or not."

"There is one thing above matter," said Hill promptly, feeling he made a better point this time, aware, too, of some one in the doorway behind him, and raising his voice a trifle for her benefit, "and that is, the delusion that there is something above matter."

"So we have your gospel at last," said the fair student. "It's all a delusion, is it? All our aspirations to lead something more than dogs' lives, all our work for anything beyond ourselves. But see how inconsistent you are. Your socialism, for instance. Why do you trouble about the interests of the race? Why do you concern yourself about the beggar in the gutter? Why are you bothering yourself to lend that book"—he indicated William Morris by a movement of the head—"to every one in the lab?"

"Girl," said the hunchback indistinctly, and glanced guiltily over his shoulder.

The girl in brown, with the brown eyes, had come into the laboratory, and stood on the other side of the table behind him, with her rolled-up apron in one hand, looking over her shoulder, listening to the discussion. She did not notice the hunchback, because she was glancing from Hill to his interlocutor. Hill's consciousness of her presence betrayed itself to her only in his studious ignoring of the fact; but she understood that, and it pleased her. "I see no reason," said he, "why a man should live like a brute because he knows of nothing beyond matter, and does not expect to exist a hundred years hence."

"Why shouldn't he?" said the fair-haired student.

"Why *should* he?" said Hill.

"What inducement has he?"

"That's the way with all you religious people. It's all a business of inducements. Cannot a man seek after the righteousness for righteousness' sake?"

There was a pause. The fair man answered, with a kind of vocal padding, "But—you see—inducement—when I said inducement," to gain time. And then the hunchback came to his rescue and inserted a question. He was a terrible person in the debating society with his questions, and they invariably took one form—a demand for a definition. "What's your definition of righteousness?" said the hunchback at this stage.

Hill experienced a sudden loss of complacency at this question, but even as it was asked, relief came in the person of Brooks, the laboratory attendant, who entered by the preparation-room door, carrying a number of freshly killed guinea-pigs

by their hind legs. "This is the last batch of material this session," said the youngster who had not previously spoken. Brooks advanced up the laboratory, smacking down a couple of guinea-pigs at each table. The rest of the class, scenting the prey from afar, came crowding in by the lecture theatre door, and the discussion perished abruptly as the students who were not already in their places hurried to them to secure the choice of a specimen. There was a noise of keys rattling on split rings as lockers were opened and dissecting instruments taken out. Hill was already standing by his table, and his box of scalpels was sticking out of his pocket. The girl in brown came a step towards him, and leaning over his table said softly, "Did you see that I returned your book, Mr. Hill?"

During the whole scene she and the book had been vividly present in his consciousness; but he made a clumsy pretence of looking at the book and seeing it for the first time. "Oh yes," he said, taking it up. "I see. Did you like it?"

"I want to ask you some questions about it—some time."

"Certainly," said Hill. "I shall be glad." He stopped awkwardly. "You liked it?" he said.

"It's a wonderful book. Only some things I don't understand."

Then suddenly the laboratory was hushed by a curious braying noise. It was the demonstrator. He was at the blackboard ready to begin the day's instruction, and it was his custom to demand silence by a sound midway between the "Er" of common intercourse and the blast of a trumpet. The girl in brown slipped back to her place; it was immediately in front of Hill's, and Hill, forgetting her forthwith, took a notebook out of the drawer of his table, turned over its leaves hastily, drew a stumpy pencil from his pocket, and prepared to make a copious note of the coming demonstration. For demonstrations and lectures are the sacred text of the College students. Books, saving only the Professor's own, you may—it is even expedient to—ignore.

Hill was the son of a Landport cobbler, and had been hooked by a chance blue paper the authorities had thrown out to the Landport Technical College. He kept himself in London on his allowance of a guinea a week, and found that, with proper care, this also covered his clothing allowance, an occasional waterproof collar, that is; and ink and needles and cotton and such-like necessities for a man about town. This was his first year and his first session, but the brown old man in Landport had already got himself detested in many public-houses by boasting of his son, "the Professor." Hill was a vigorous youngster, with a serene contempt for the clergy of all denominations, and a fine ambition to reconstruct the world. He regarded his scholarship as a brilliant opportunity. He had begun to read at seven, and had read steadily whatever came in his way, good or bad, since then. His worldly

experience had been limited to the island of Portsea, and acquired chiefly in the wholesale boot factory in which he had worked by day, after passing the seventh standard of the Board school. He had a considerable gift of speech, as the College Debating Society, which met amidst the crushing machines and mine models in the metallurgical theatre downstairs, already recognised—recognised by a violent battering of desks whenever he rose. And he was just at that fine emotional age when life opens at the end of a narrow pass like a broad valley at one's feet, full of the promise of wonderful discoveries and tremendous achievements. And his own limitations, save that he knew that he knew neither Latin nor French, were all unknown to him.

At first his interest had been divided pretty equally between his biological work at the College and social and theological theorising, an employment which he took in deadly earnest. Of a night, when the big museum library was not open, he would sit on the bed of his room in Chelsea with his coat and a muffler on, and write out the lecture notes and revise his dissection memoranda until Thorpe called him out by a whistle—the landlady objected to open the door to attic visitors—and then the two would go prowling about the shadowy, shiny, gas-lit streets, talking, very much in the fashion of the sample just given, of the God Idea and Righteousness and Carlyle and the Reorganisation of Society. And in the midst of it all, Hill, arguing not only for Thorpe but for the casual passer-by, would lose the thread of his argument glancing at some pretty painted face that looked meaningfully at him as he passed. Science and Righteousness! But once or twice lately there had been signs that a third interest was creeping into his life, and he had found his attention wandering from the fate of the mesoblastic somites or the probable meaning of the blastopore, to the thought of the girl with the brown eyes who sat at the table before him.

She was a paying student; she descended inconceivable social altitudes to speak to him. At the thought of the education she must have had, and the accomplishments she must possess, the soul of Hill became abject within him. She had spoken to him first over a difficulty about the alisphenoid of a rabbit's skull, and he had found that, in biology at least, he had no reason for self-abasement. And from that, after the manner of young people starting from any starting-point, they got to generalities, and while Hill attacked her upon the question of socialism—some instinct told him to spare her a direct assault upon her religion—she was gathering resolution to undertake what she told herself was his æsthetic education. She was a year or two older than he, though the thought never occurred to him. The loan of *News from Nowhere* was the beginning of a series of cross loans. Upon some absurd first principle of his, Hill had never "wasted time" upon poetry

and it seemed an appalling deficiency to her. One day in the lunch hour, when she chanced upon him alone in the little museum where the skeletons were arranged, shamefully eating the bun that constituted his midday meal, she retreated, and returned to lend him, with a slightly furtive air, a volume of Browning. He stood sideways towards her and took the book rather clumsily, because he was holding the bun in the other hand. And in the retrospect his voice lacked the cheerful clearness he could have wished.

That occurred after the examination in comparative anatomy, on the day before the College turned out its students and was carefully locked up by the officials for the Christmas holidays. The excitement of cramming for the first trial of strength had for a little while dominated Hill to the exclusion of his other interests. In the forecasts of the result in which every one indulged he was surprised to find that no one regarded him as a possible competitor for the Harvey Commemoration Medal, of which this and the two subsequent examinations disposed. It was about this time that Wedderburn, who so far had lived inconspicuously on the uttermost margin of Hill's perceptions, began to take on the appearance of an obstacle. By a mutual agreement, the nocturnal prowlings with Thorpe ceased for the three weeks before the examination, and his landlady pointed out that she really could not supply so much lamp oil at the price. He walked to and fro from the College with little slips of mnemonics in his hand, lists of crayfish appendages, rabbits' skull-bones, and vertebrate nerves, for example, and became a positive nuisance to foot passengers in the opposite direction.

But, by a natural reaction, Poetry and the girl with the brown eyes ruled the Christmas holiday. The pending results of the examination became such a secondary consideration that Hill marvelled at his father's excitement. Even had he wished it, there was no comparative anatomy to read in Landport, and he was too poor to buy books, but the stock of poets in the library was extensive, and Hill's attack was magnificently sustained. He saturated himself with the fluent numbers of Longfellow and Tennyson, and fortified himself with Shakespeare; found a kindred soul in Pope and a master in Shelley, and heard and fled the siren voices of Eliza Cook and Mrs. Hemans. But he read no more Browning, because he hoped for the loan of other volumes from Miss Haysman when he returned to London.

He walked from his lodgings to the College with that volume of Browning in his shiny black bag, and his mind teeming with the finest general propositions about poetry. Indeed, he framed first this little speech and then that with which to grace the return. The morning was an exceptionally pleasant one for London; there was a clear hard frost and undeniable blue in the sky, a thin haze softened every outline, and warm

shafts of sunlight struck between the house blocks and turned the sunny side of the street to amber and gold. In the hall of the College he pulled off his glove and signed his name with fingers so stiff with cold that the characteristic dash under the signature he cultivated became a quivering line. He imagined Miss Haysman about him everywhere. He turned at the staircase, and there, below, he saw a crowd struggling at the foot of the notice-board. This, possibly, was the biology list. He forgot Browning and Miss Haysman for the moment, and joined the scrimmage. And at last, with his cheek flattened against the sleeve of the man on the step above him, he read the list—

CLASS I

H. J. Somers Wedderburn
William Hill

and thereafter followed a second class that is outside our present sympathies. It was characteristic that he did not trouble to look for Thorpe on the physics list, but backed out of the struggle at once, and in a curious emotional state between pride over common second-class humanity and acute disappointment at Wedderburn's success, went on his way upstairs. At the top, as he was hanging up his coat in the passage, the zoological demonstrator, a young man from Oxford who secretly regarded him as a blatant "mugger" of the very worst type, offered his heartiest congratulations.

At the laboratory door Hill stopped for a second to get his breath, and then entered. He looked straight up the laboratory and saw all five girl students grouped in their places, and Wedderburn, the once retiring Wedderburn, leaning rather gracefully against the window, playing with the blind tassel and talking apparently to the five of them. Now, Hill could talk bravely enough and even overbearingly to one girl, and he could have made a speech to a roomful of girls, but this business of standing at ease and appreciating, fencing, and returning quick remarks round a group was, he knew, altogether beyond him. Coming up the staircase his feelings for Wedderburn had been generous, a certain admiration perhaps, a willingness to shake his hand conspicuously and heartily as one who had fought but the first round. But before Christmas Wedderburn had never gone up to that end of the room to talk. In a flash Hill's mist of vague excitement condensed abruptly to a vivid dislike of Wedderburn. Possibly his expression changed. As he came up to his place, Wedderburn nodded carelessly to him, and the others glanced round. Miss Haysman looked at him and away again, the faintest touch of her eyes. "I can't agree with you, Mr. Wedderburn," she said.

"I must congratulate you on your first class, Mr. Hill," said

the spectacled girl in green, turning round and beaming at him.

"It's nothing," said Hill, staring at Wedderburn and Miss Haysman talking together, and eager to hear what they talked about.

"We poor folks in the second class don't think so," said the girl in spectacles.

What was it Wedderburn was saying? Something about William Morris! Hill did not answer the girl in spectacles, and the smile died out of his face. He could not hear, and failed to see how he could "cut in." Confound Wedderburn! He sat down, opened his bag, hesitated whether to return the volume of Browning forthwith, in the sight of all, and instead drew out his new notebooks for the short course in elementary botany that was now beginning, and which would terminate in February. As he did so, a fat heavy man with a white face and pale grey eyes—Bindon, the professor of botany, who came up from Kew for January and February—came in by the lecture theatre door, and passed, rubbing his hands together and smiling in silent affability down the laboratory.

In the subsequent six weeks Hill experienced some very rapid and curiously complex emotional developments. For the most part he had Wedderburn in focus—a fact that Miss Haysman never suspected. She told Hill (for in the comparative privacy of the museum she talked a good deal to him of socialism and Browning and general propositions) that she had met Wedderburn at the house of some people she knew, and "he's inherited his cleverness; for his father, you know, is the great eye specialist."

"My father is a cobbler," said Hill, quite irrelevantly, and perceived the want of dignity even as he said it. But the gleam of jealousy did not offend her. She conceived herself the fundamental source of it. He suffered bitterly from a sense of Wedderburn's unfairness, and a realisation of his own handicap. Here was this Wedderburn had picked up a prominent man for a father, and instead of his losing so many marks on the score of that advantage, it was counted to him for righteousness! And while Hill had to introduce himself and talk to Miss Haysman clumsily over mangled guinea-pigs in the laboratory, this Wedderburn, in some backstairs way, had access to her social altitudes, and could converse in a polished argot that Hill understood perhaps, but felt incapable of speaking. Not, of course, that he wanted to. Then it seemed to Hill that for Wedderburn to come there day after day with cuffs unfrayed, neatly tailored, precisely barbered, quietly perfect, was in itself an ill-bred, sneering sort of proceeding. Moreover, it was a stealthy thing for Wedderburn to behave insignificantly for a space, to mock modesty, to lead Hill to fancy that he himself was beyond dispute the man of

the year, and then suddenly to dart in front of him, and incontinently to swell up in this fashion. In addition to these things, Wedderburn displayed an increasing disposition to join in any conversational grouping that included Miss Haysman; and would venture, and indeed seek occasion, to pass opinions derogatory to socialism and atheism. He goaded Hill to incivilities by neat, shallow, and exceedingly effective personalities about the socialist leaders, until Hill hated Bernard Shaw's graceful egotisms, William Morris's limited editions and luxurious wall-papers, and Walter Crane's charmingly absurd ideal working men, about as much as he hated Wedderburn. The dissertations in the laboratory, that had been his glory in the previous term, became a danger, degenerated into inglorious tussles with Wedderburn, and Hill kept to them only out of an obscure perception that his honour was involved. In the debating society Hill knew quite clearly that, to a thunderous accompaniment of banged desks, he could have pulverised Wedderburn. Only Wedderburn never attended the debating society to be pulverised, because—nauseous affectation!—he "dined late."

You must not imagine that these things presented themselves in quite such a crude form to Hill's perception. Hill was a born generaliser. Wedderburn to him was not so much an individual obstacle as a type, the salient angle of a class. The economic theories that, after infinite ferment, had shaped themselves in Hill's mind, became abruptly concrete at the contact. The world became full of easy-mannered, graceful, gracefully-dressed, conversationally dexterous, finally shallow Wedderburns, Bishops Wedderburn, Wedderburn M.P.'s, Professors Wedderburn, Wedderburn landlords, all with finger-bowl shibboleths and epigrammatic cities of refuge from a sturdy debater. And every one ill-clothed or ill-dressed, from the cobbler to the cab-runner, was, to Hill's imagination, a man and a brother, a fellow-sufferer. So that he became, as it were, a champion of the fallen and oppressed, albeit to outward seeming only a self-assertive, ill-mannered young man, and an unsuccessful champion at that. Again and again a skirmish over the afternoon tea that the girl students had inaugurated left Hill with flushed cheeks and a tattered temper, and the debating society noticed a new quality of sarcastic bitterness in his speeches.

You will understand now how it was necessary, if only in the interests of humanity, that Hill should demolish Wedderburn in the forthcoming examination and outshine him in the eyes of Miss Haysman; and you will perceive, too, how Miss Haysman fell into some common feminine misconceptions. The Hill-Wedderburn quarrel, for in his unostentatious way Wedderburn reciprocated Hill's ill-veiled rivalry, became a tribute to her indefinable charm; she was the Queen of Beauty in a tournament of scalpels and stumpy pencils. To her con-

fidential friend's secret annoyance, it even troubled her conscience, for she was a good girl, and painfully aware, through Ruskin and contemporary fiction, how entirely men's activities are determined by women's attitudes. And if Hill never by any chance mentioned the topic of love to her, she only credited him with the finer modesty for that omission.

So the time came on for the second examination, and Hill's increasing pallor confirmed the general rumour that he was working hard. In the aerated bread shop near South Kensington Station you would see him, breaking his bun and sipping his milk with his eyes intent upon a paper of closely written notes. In his bedroom there were propositions about buds and stems round his looking-glass, a diagram to catch his eye, if soap should chance to spare it, above his washing-basin. He missed several meetings of the debating society, but he found the chance encounters with Miss Haysman in the spacious ways of the adjacent art museum, or in the little museum at the top of the College, or in the College corridors, more frequent and very restful. In particular, they used to meet in a little gallery full of wrought-iron chests and gates near the art library, and there Hill used to talk, under the gentle stimulus of her flattering attention, of Browning and his personal ambitions. A characteristic she found remarkable in him was his freedom from avarice. He contemplated quite calmly the prospect of living all his life on an income below a hundred pounds a year. But he was determined to be famous, to make, recognisably in his own proper person, the world a better place to live in. He took Bradlaugh and John Burns for his leaders and models, poor, even impecunious, great men. But Miss Haysman thought that such lives were deficient on, the æsthetic side, by which, though she did not know it, she meant good wall-paper and upholstery, pretty books, tasteful clothes, concerts, and meals nicely cooked and respectfully served.

At last came the day of the second examination, and the professor of botany, a fussy, conscientious man, rearranged all the tables in a long narrow laboratory to prevent copying, and put his demonstrator on a chair on a table (where he felt, he said, like a Hindu god), to see all the cheating, and stuck a notice outside the door, "Door closed," for no earthly reason that any human being could discover. And all the morning from ten till one the quill of Wedderburn shrieked defiance at Hill's, and the quills of the others chased their leaders in a tireless pack, and so also it was in the afternoon. Wedderburn was a little quieter than usual, and Hill's face was not hot all day, and his overcoat bulged with textbooks and notebooks against the last moment's revision. And the next day, in the morning and in the afternoon, was the practical examination, when sections had to be cut and slides identified. In the morning Hill was depressed because he knew he had cut a thick section, and in the afternoon came the mysterious slip.

It was just the kind of thing that the botanical professor was always doing. Like the income tax, it offered a premium to the cheat. It was a preparation under the microscope, a little glass slip, held in its place on the stage of the instrument by light steel clips, and the inscription set forth that the slip was not to be moved. Each student was to go in turn to it, sketch it, write in his book of answers what he considered it to be, and return to his place. Now, to move such a slip is a thing one can do by a chance movement of the finger, and in a fraction of a second. The professor's reason for decreeing that the slip should not be moved depended on the fact that the object he wanted identified was characteristic of a certain tree stem. In the position in which it was placed it was a difficult thing to recognise, but once the slip was moved so as to bring other parts of the preparation into view, its nature was obvious enough.

Hill came to this, flushed from a contest with staining reagents, sat down on the little stool before the microscope, turned the mirror to get the best light, and then, out of sheer habit, shifted the slip. At once he remembered the prohibition, and, with an almost continuous motion of his hands, moved it back, and sat paralysed with astonishment at his action.

Then, slowly, he turned his head. The professor was out of the room; the demonstrator sat aloft on his impromptu rostrum, reading the *Q. Jour. Mi. Sci.*; the rest of the examinees were busy, and with their backs to him. Should he own up to the accident now? He knew quite clearly what the thing was. It was a lenticel, a characteristic preparation from the elder-tree. His eyes roved over his intent fellow-students and Wedderburn suddenly glanced over his shoulder at him with a queer expression in his eyes. The mental excitement that had kept Hill at an abnormal pitch of vigour these two days gave way to a curious nervous tension. His book of answers was beside him. He did not write down what the thing was, but with one eye at the microscope he began making a hasty sketch of it. His mind was full of this grotesque puzzle in ethics that had suddenly been sprung upon him. Should he identify it? or should he leave this question unanswered? In that case Wedderburn would probably come out first in the second result. How could he tell now whether he might not have identified the thing without shifting it? It was possible that Wedderburn had failed to recognise it, of course. Suppose Wedderburn too had shifted the slide? He looked up at the clock. There were fifteen minutes in which to make up his mind. He gathered up his book of answers and the coloured pencils he used in illustrating his replies and walked down to his seat.

He read through his manuscript, and then sat thinking and gnawing his knuckle. It would look queer now if he owned

up. He *must* beat Wedderburn. He forgot the examples of those starry gentlemen, John Burns and Bradlaugh. Besides, he reflected, the glimpse of the rest of the slip he had had was after all quite accidental, forced upon him by chance, a kind of providential revelation rather than an unfair advantage. It was not nearly so dishonest to avail himself of that as it was of Broome, who believed in the efficacy of prayer, to pray daily for a first-class. "Five minutes more," said the demonstrator, folding up his paper and becoming observant. Hill watched the clock hands until two minutes remained; then he opened the book of answers, and, with hot ears and an affectation of ease, gave his drawing of the lenticel its name.

When the second pass list appeared, the previous positions of Wedderburn and Hill were reversed, and the spectacled girl in green, who knew the demonstrator in private life (where he was practically human), said that in the result of the two examinations taken together Hill had the advantage of a mark—167 to 166 out of a possible 200. Every one admired Hill in a way, though the suspicion of "mugging" clung to him. But Hill was to find congratulations and Miss Haysman's enhanced opinion of him, and even the decided decline in the crest of Wedderburn, tainted by an unhappy memory. He felt a remarkable access of energy at first, and the note of a democracy marching to triumph returned to his debating society speeches; he worked at his comparative anatomy with tremendous zeal and effect, and he went on with his æsthetic education. But through it all, a vivid little picture was continually coming before his mind's eye—of a sneakish person manipulating a slide.

No human being had witnessed the act, and he was cocksure that no higher power existed to see it; but for all that it worried him. Memories are not dead things, but alive; they dwindle in disuse, but they harden and develop in all sorts of queer ways if they are being continually fretted. Curiously enough, though at the time he perceived clearly that the shifting was accidental, as the days wore on his memory became confused about it, until at last he was not sure—although he assured himself that he *was* sure—whether the movement had been absolutely involuntary. Then it is possible that Hill's dietary was conducive to morbid conscientiousness; a breakfast frequently eaten in a hurry, a midday bun, and, at such hours after five as chanced to be convenient, such meat as his means determined, usually in a chop-house in a back street off the Brompton Road. Occasionally he treated himself to threepenny or ninepenny classics, and they usually represented a suppression of potatoes or chops. It is indisputable that outbreaks of self-abasement and emotional revival have a distinct relation to periods of scarcity. But apart from this influence on the feelings, there

was in Hill a distinct aversion to falsity that the blasphemous Landport cobbler had inculcated by strap and tongue from his earliest years. Of one fact about professed atheists I am convinced; they may be—they usually are—fools, void of subtlety, revilers of holy institutions, brutal speakers, and mischievous knaves, but they lie with difficulty. If it were not so, if they had the faintest grasp of the idea of compromise, they would simply be liberal churchmen. And, moreover, this memory poisoned his regard for Miss Haysman. For she now so evidently preferred him to Wedderburn that he felt sure he cared for her, and began reciprocating her attentions by timid marks of personal regard; at one time he even bought a bunch of violets, carried it about in his pocket, and produced it with a stumbling explanation, withered and dead, in the gallery of old iron. It poisoned, too, the denunciation of capitalist dishonesty that had been one of his life's pleasures. And, lastly, it poisoned his triumph in Wedderburn. Previously he had been Wedderburn's superior in his own eyes, and had raged simply at a want of recognition. Now he began to fret at the darker suspicion of positive inferiority. He fancied he found justifications for his position in Browning, but they vanished on analysis. At last—moved, curiously enough, by exactly the same motive forces that had resulted in his dishonesty—he went to Professor Bindon, and made a clean breast of the whole affair. As Hill was a paid student, Professor Bindon did not ask him to sit down, and he stood before the professor's desk as he made his confession.

"It's a curious story," said Professor Bindon, slowly realising how the thing reflected on himself, and then letting his anger rise—"a most remarkable story. I can't understand your doing it, and I can't understand this avowal. You're a type of student—Cambridge men would never dream—I suppose I ought to have thought—Why *did* you cheat?"

"I didn't cheat," said Hill.

"But you have just been telling me you did."

"I thought I explained——"

"Either you cheated or you did not cheat."

"I said my motion was involuntary."

"I am not a metaphysician, I am a servant of science—of fact. You were told not to move the slip. You did move the slip. If that is not cheating——"

"If I was a cheat," said Hill, with the note of hysterics in his voice, "should I come here and tell you?"

"Your repentance, of course, does you credit," said Professor Bindon, "but it does not alter the original facts."

"No, sir," said Hill, giving in in utter self-abasement.

"Even now you cause an enormous amount of trouble. The examination list will have to be revised."

"I suppose so, sir."

"Suppose so? Of course it must be revised. And I don't see how I can conscientiously pass you."

"Not pass me?" said Hill. "Fail me?"

"It's the rule in all examinations. Or where should we be? What else did you expect? You don't want to shirk the consequences of your own acts?"

"I thought, perhaps—" said Hill. And then, "Fail me? I thought, as I told you, you would simply deduct the marks given for that slip."

"Impossible!" said Bindon. "Besides, it would still leave you above Wedderburn. Deduct only the marks— Preposterous! The Departmental Regulations distinctly say——"

"But it's my own admission, sir."

"The Regulations say nothing whatever of the manner in which the matter comes to light. They simply provide——"

"It will ruin me. If I fail this examination, they won't renew my scholarship."

"You should have thought of that before."

"But, sir, consider all my circumstances——"

"I cannot consider anything. Professors in this College are machines. The Regulations will not even let us recommend our students for appointments. I am a machine, and you have worked me. I have to do——"

"It's very hard, sir."

"Possibly it is."

"If I am to be failed this examination, I might as well go home at once."

"That is as you think proper." Bindon's voice softened a little; he perceived he had been unjust, and, provided he did not contradict himself, he was disposed to amelioration. "As a private person," he said, "I think this confession of yours goes far to mitigate your offence. But you have set the machinery in motion, and now it must take its course. I—I am really sorry you gave way."

A wave of emotion prevented Hill from answering. Suddenly, very vividly, he saw the heavily-lined face of the old Landport cobbler, his father. "Good God! What a fool I have been!" he said hotly and abruptly.

"I hope," said Bindon, "that it will be a lesson to you."

But, curiously enough, they were not thinking of quite the same indiscretion.

There was a pause.

"I would like a day to think, sir, and then I will let you know—about going home, I mean," said Hill, moving towards the door.

The next day Hill's place was vacant. The spectacled girl in green was, as usual, first with the news. Wedderburn and Miss Haysman were talking of a performance of *The Meistersingers* when she came up to them.

"Have you heard?" she said.

"Heard what?"

"There was cheating in the examination."

"Cheating!" said Wedderburn, with his face suddenly hot. "How?"

"That slide——"

"Moved? Never!"

"It was. That slide that we weren't to move——"

"Nonsense!" said Wedderburn. "Why! How could they find out? Who do they say——?"

"It was Mr. Hill."

"Hill!"

"Mr. Hill!"

"Not—surely not the immaculate Hill?" said Wedderburn, recovering.

"I don't believe it," said Miss Haysman. "How do you know?"

"I *didn't*," said the girl in spectacles. "But I know it now for a fact. Mr. Hill went and confessed to Professor Bindon himself."

"By Jove!" said Wedderburn. "Hill of all people. But I am always inclined to distrust these philanthropists-on-principle——"

"Are you quite sure?" said Miss Haysman, with a catch in her breath.

"Quite. It's dreadful, isn't it? But, you know, what can you expect? His father is a cobbler."

Then Miss Haysman astonished the girl in spectacles.

"I don't care. I will not believe it," she said, flushing darkly under her warm-tinted skin. "I will not believe it until he has told me so himself—face to face. I would scarcely believe it then," and abruptly she turned her back on the girl in spectacles, and walked to her own place.

"It's true, all the same," said the girl in spectacles, peering and smiling at Wedderburn.

But Wedderburn did not answer her. She was indeed one of those people who seem destined to make unanswered remarks.

STORY THIRTY-FIVE

THE CRYSTAL EGG

THERE was, until a year ago, a little and very grimy-looking shop near Seven Dials, over which, in weather-worn yellow lettering, the name of "C. Cave, Naturalist and Dealer in Antiquities," was inscribed. The contents of its window were curiously varied. They comprised some elephant tusks and an imperfect set of chessmen, beads and weapons, a box of eyes, two skulls of tigers and one human, several moth-eaten stuffed monkeys (one holding a lamp), an old-fashioned cabinet, a fly-blown ostrich egg or so, some fishing-tackle, and an extraordinarily dirty, empty glass fish-tank. There was also, at the moment the story begins, a mass of crystal, worked into the shape of an egg and brilliantly polished. And at that two people, who stood outside the window, were looking, one of them a tall, thin clergyman, the other a black-bearded young man of dusky complexion and unobtrusive costume. The dusky young man spoke with eager gesticulation, and seemed anxious for his companion to purchase the article.

While they were there, Mr. Cave came into his shop, his beard still wagging with the bread-and-butter of his tea. When he saw these men and the object of their regard, his countenance fell. He glanced guiltily over his shoulder, and softly shut the door. He was a little old man, with pale face and peculiar watery blue eyes; his hair was a dirty grey, and he wore a shabby blue frock-coat, an ancient silk hat, and carpet slippers very much down at heel. He remained watching the two men as they talked. The clergyman went deep into his trouser pocket, examined a handful of money, and showed his teeth in an agreeable smile. Mr. Cave seemed still more depressed when they came into the shop.

The clergyman, without any ceremony, asked the price of the crystal egg. Mr. Cave glanced nervously towards the door leading into the parlour, and said five pounds. The clergyman protested that the price was high, to his companion as well as to Mr. Cave—it was, indeed, very much more than Mr. Cave had intended to ask, when he had stocked the article—and an attempt at bargaining ensued. Mr. Cave stepped to the shop-door, and held it open. "Five pounds is my price," he said, as though he wished to save himself the trouble of unprofitable discussion. As he did so, the upper portion of a woman's face appeared above the blind in the glass upper panel of the door leading into the parlour, and stared curiously at the two customers. "Five pounds is my price," said Mr. Cave, with a quiver in his voice.

The swarthy young man had so far remained a spectator,

watching Cave keenly. Now he spoke. "Give him five pounds," he said. The clergyman glanced at him to see if he were in earnest, and, when he looked at Mr. Cave again, he saw that the latter's face was white. "It's a lot of money," said the clergyman, and, diving into his pocket, began counting his resources. He had little more than thirty shillings, and he appealed to his companion, with whom he seemed to be on terms of considerable intimacy. This gave Mr. Cave an opportunity of collecting his thoughts, and he began to explain in an agitated manner that the crystal was not, as a matter of fact, entirely free for sale. His two customers were naturally surprised at this, and inquired why he had not thought of that before he began to bargain. Mr. Cave became confused, but he stuck to his story, that the crystal was not in the market that afternoon, that a probable purchaser of it had already appeared. The two, treating this as an attempt to raise the price still further, made as if they would leave the shop. But at this point the parlour door opened, and the owner of the dark fringe and the little eyes appeared.

She was a coarse-featured, corpulent woman, younger and very much larger than Mr. Cave; she walked heavily, and her face was flushed. "That crystal *is* for sale," she said. "And five pounds is a good enough price for it. I can't think what you're about, Cave, not to take the gentleman's offer!"

Mr. Cave, greatly perturbed by the irruption, looked angrily at her over the rims of his spectacles, and, without excessive assurance, asserted his right to manage his business in his own way. An altercation began. The two customers watched the scene with interest and some amusement, occasionally assisting Mrs. Cave with suggestions. Mr. Cave, hard driven, persisted in a confused and impossible story of an inquiry for the crystal that morning, and his agitation became painful. But he stuck to his point with extraordinary persistence. It was the young Oriental who ended this curious controversy. He proposed that they should call again in the course of two days—so as to give the alleged inquirer a fair chance. "And then we must insist," said the clergyman. "Five pounds." Mrs. Cave took it on herself to apologise for her husband, explaining that he was sometimes "a little odd," and as the two customers left, the couple prepared for a free discussion of the incident in all its bearings.

Mrs. Cave talked to her husband with singular directness. The poor little man, quivering with emotion, muddled himself between his stories, maintaining on the one hand that he had another customer in view, and on the other asserting that the crystal was honestly worth ten guineas. "Why did you ask five pounds?" said his wife. "Do let me manage my business my own way!" said Mr. Cave.

Mr. Cave had living with him a step-daughter and a step-son,

and at supper that night the transaction was rediscussed. None of them had a high opinion of Mr. Cave's business methods, and this action seemed a culminating folly.

"It's my opinion he's refused that crystal before," said the step-son, a loose-limbed lout of eighteen.

"But *Five Pounds!*" said his step-daughter, an argumentative young woman of six-and-twenty.

Mr. Cave's answers were wretched; he could only mumble weak assertions that he knew his own business best. They drove him from his half-eaten supper into the shop, to close it for the night, his ears aflame and tears of vexation behind his spectacles. "Why had he left the crystal in the window so long? The folly of it!" That was the trouble closest in his mind. For a time he could see no way of evading sale.

After supper his step-daughter and step-son smartened themselves up and went out, and his wife retired upstairs to reflect upon the business aspects of the crystal, over a little sugar and lemon and so forth in hot water. Mr. Cave went into the shop, and stayed there until late, ostensibly to make ornamental rockeries for gold-fish cases but really for a private purpose that will be better explained later. The next day Mrs. Cave found that the crystal had been removed from the window, and was lying behind some second-hand books on angling. She replaced it in a conspicuous position. But she did not argue further about it, as a nervous headache disinclined her from debate. Mr. Cave was always disinclined. The day passed disagreeably. Mr. Cave was, if anything, more absent-minded than usual, and uncommonly irritable withal. In the afternoon, when his wife was taking her customary sleep, he removed the crystal from the window again.

The next day Mr. Cave had to deliver a consignment of dog-fish at one of the hospital schools, where they were needed for dissection. In his absence Mrs. Cave's mind reverted to the topic of the crystal, and the methods of expenditure suitable to a windfall of five pounds. She had already devised some very agreeable expedients, among others a dress of green silk for herself and a trip to Richmond, when a jangling of the front-door bell summoned her into the shop. The customer was an examination coach who came to complain of the non-delivery of certain frogs asked for the previous day. Mrs. Cave did not approve of this particular branch of Mr. Cave's business, and the gentleman, who had called in a somewhat aggressive mood, retired after a brief exchange of words—entirely civil so far as he was concerned. Mrs. Cave's eye then naturally turned to the window; for the sight of the crystal was an assurance of the five pounds and of her dreams. What was her surprise to find it gone!

She went to the place behind the locker on the counter, where she had discovered it the day before. It was not there; and she immediately began an eager search about the shop.

When Mr. Cave returned from his business with the dog-fish, about a quarter to two in the afternoon, he found the shop in some confusion, and his wife, extremely exasperated and on her knees behind the counter, routing among his taxidermic material. Her face came up hot and angry over the counter, as the jangling bell announced his return, and she forthwith accused him of "hiding it."

"Hid *what*?" asked Mr. Cave.

"The crystal!"

At that Mr. Cave, apparently much surprised, rushed to the window. "Isn't it here?" he said. "Great Heavens! what has become of it?"

Just then, Mr. Cave's step-son re-entered the shop from the inner room—he had come home a minute or so before Mr. Cave—and he was blaspheming freely. He was apprenticed to a second-hand furniture dealer down the road, but he had his meals at home, and he was naturally annoyed to find no dinner ready.

But when he heard of the loss of the crystal, he forgot his meal, and his anger was diverted from his mother to his step-father. Their first idea, of course, was that he had hidden it. But Mr. Cave stoutly denied all knowledge of its fate—freely offering his dedabbled affidavit in the matter—and at last was worked up to the point of accusing, first, his wife and then his step-son of having taken it with a view to a private sale. So began an exceedingly acrimonious and emotional discussion, which ended for Mrs. Cave in a peculiar nervous condition midway between hysterics and amuck, and caused the step-son to be half an hour late at the furniture establishment in the afternoon. Mr. Cave took refuge from his wife's emotions in the shop.

In the evening the matter was resumed, with less passion and in a judicial spirit, under the presidency of the step-daughter. The supper passed unhappily and culminated in a painful scene. Mr. Cave gave way at last to extreme exasperation, and went out banging the front door violently. The rest of the family, having discussed him with the freedom his absence warranted, hunted the house from garret to cellar, hoping to light upon the crystal.

The next day the two customers called again. They were received by Mrs. Cave almost in tears. It transpired that no one *could* imagine all that she had stood from Cave at various times in her married pilgrimage. . . . She also gave a garbled account of the disappearance. The clergyman and the Oriental laughed silently at one another, and said it was very extraordinary. As Mrs. Cave seemed disposed to give them the complete history of her life, they made to leave the shop. Thereupon Mrs. Cave, still clinging to hope, asked for the clergyman's address, so that, if she could get anything out of Cave, she might communicate it. The address was duly given,

but apparently was afterwards mislaid. Mrs. Cave can remember nothing about it.

In the evening of that day, the Caves seem to have exhausted their emotions, and Mr. Cave, who had been out in the afternoon, supped in a gloomy isolation that contrasted pleasantly with the impassioned controversy of the previous days. For some time matters were very badly strained in the Cave household, but neither crystal nor customer reappeared.

Now, without mincing the matter, we must admit that Mr. Cave was a liar. He knew perfectly well where the crystal was. It was in the rooms of Mr. Jacoby Wace, Assistant Demonstrator at St. Catherine's Hospital, Westbourne Street. It stood on the sideboard partially covered by a black velvet cloth, and beside a decanter of American whisky. It is from Mr. Wace, indeed, that the particulars upon which this narrative is based were derived. Cave had taken off the thing to the hospital hidden in the dog-fish sack, and there had pressed the young investigator to keep it for him. Mr. Wace was a little dubious at first. His relationship to Cave was peculiar. He had a taste for singular characters, and he had more than once invited the old man to smoke and drink in his rooms, and to unfold his rather amusing views of life in general and of his wife in particular. Mr. Wace had encountered Mrs. Cave, too, on occasions when Mr. Cave was not at home to attend to him. He knew the constant interference to which Cave was subjected, and having weighed the story judicially, he decided to give the crystal a refuge. Mr. Cave promised to explain the reasons for his remarkable affection for the crystal more fully on a later occasion, but he spoke distinctly of seeing visions therein. He called on Mr. Wace the same evening.

He told a complicated story. The crystal he said had come into his possession with other oddments at the forced sale of another curiosity dealer's effects, and not knowing what its value might be, he had ticketed it at ten shillings. It had hung upon his hands at that price for some months, and he was thinking of "reducing the figure," when he made a singular discovery.

At that time his health was very bad—and it must be borne in mind that, throughout all this experience, his physical condition was one of ebb—and he was in considerable distress by reason of the negligence, the positive ill-treatment even, he received from his wife and step-children. His wife was vain, extravagant, unfeeling, and had a growing taste for private drinking; his step-daughter was mean and over-reaching; and his step-son had conceived a violent dislike for him, and lost no chance of showing it. The requirements of his business pressed heavily upon him, and Mr. Wace does not think that he was altogether free from occasional intemperance. He had begun life in a comfortable position, he was a man of fair education, and he suffered, for weeks at a stretch, from melancholia

and insomnia. Afraid to disturb his family, he would slip quietly from his wife's side, when his thoughts became intolerable, and wander about the house. And about three o'clock one morning, late in August, chance directed him into the shop.

The dirty little place was impenetrably black except in one spot, where he perceived an unusual glow of light. Approaching this, he discovered it to be the crystal egg, which was standing on the corner of the counter towards the window. A thin ray smote through a crack in the shutters, impinged upon the object, and seemed as it were to fill its entire interior.

It occurred to Mr. Cave that this was not in accordance with the laws of optics as he had known them in his younger days. He could understand the rays being refracted by the crystal and coming to a focus in its interior, but this diffusion jarred with his physical conceptions. He approached the crystal nearly, peering into it and round it, with a transient revival of the scientific curiosity that in his youth had determined his choice of a calling. He was surprised to find the light not steady, but writhing within the substance of the egg, as though that object was a hollow sphere of some luminous vapour. In moving about to get different points of view, he suddenly found that he had come between it and the ray, and that the crystal none the less remained luminous. Greatly astonished, he lifted it out of the light ray and carried it to the darkest part of the shop. It remained bright for some four or five minutes, when it slowly faded and went out. He placed it in the thin streak of daylight, and its luminousness was almost immediately restored.

So far, at least, Mr. Wace was able to verify the remarkable story of Mr. Cave. He has himself repeatedly held this crystal in a ray of light (which had to be of a less diameter than one millimetre). And in a perfect darkness, such as could be produced by velvet wrapping, the crystal did undoubtedly appear very faintly phosphorescent. It would seem, however, that the luminousness was of some exceptional sort, and not equally visible to all eyes; for Mr. Harbinger—whose name will be familiar to the scientific reader in connection with the Pasteur Institute—was quite unable to see any light whatever. And Mr. Wace's own capacity for its appreciation was out of comparison inferior to that of Mr. Cave's. Even with Mr. Cave the power varied very considerably; his vision was most vivid during states of extreme weakness and fatigue.

Now from the outset this light in the crystal exercised an irresistible fascination upon Mr. Cave. And it says more for his loneliness of soul than a volume of pathetic writing could do, that he told no human being of his curious observations. He seems to have been living in such an atmosphere of petty spite that to admit the existence of a pleasure would have been to risk the loss of it. He found that as the dawn advanced, and the amount of diffused light increased, the crystal

became to all appearance non-luminous. And for some time he was unable to see anything in it, except at night-time, in dark corners of the shop.

But the use of an old velvet cloth, which he used as a background for a collection of minerals, occurred to him, and by doubling this, and putting it over his head and hands, he was able to get a sight of the luminous movement within the crystal even in the day-time. He was very cautious lest he should be thus discovered by his wife, and he practised this occupation only in the afternoons, while she was asleep upstairs, and then circumspectly in a hollow under the counter. And one day, turning the crystal about in his hands, he saw something. It came and went like a flash, but it gave him the impression that the object had for a moment opened to him the view of a wide and spacious and strange country; and, turning it about, he did, just as the light faded, see the same vision again.

Now, it would be tedious and unnecessary to state all the phases of Mr. Cave's discovery from this point. Suffice that the effect was this: the crystal, being peered into at an angle of about 137 degrees from the direction of the illuminating ray, gave a clear and consistent picture of a wide and peculiar country-side. It was not dream-like at all; it produced a definite impression of reality, and the better the light the more real and solid it seemed. It was a moving picture: that is to say, certain objects moved in it, but slowly in an orderly manner like real things, and, according as the direction of the lighting and vision changed, the picture changed also. It must, indeed, have been like looking through an oval glass at a view, and turning the glass about to get at different aspects.

Mr. Cave's statements, Mr. Wace assures me, were extremely circumstantial, and entirely free from any of that emotional quality that taints hallucinatory impressions. But it must be remembered that all the efforts of Mr. Wace to see any similar clarity in the faint opalescence of the crystal were wholly unsuccessful, try as he would. The difference in intensity of the impressions received by the two men was very great, and it is quite conceivable that what was a view to Mr. Cave was a mere blurred nebulousity to Mr. Wace.

The view, as Mr. Cave described it, was invariably of an extensive plain, and he seemed always to be looking at it from a considerable height, as if from a tower or a mast. To the east and to the west the plain was bounded at a remote distance by vast reddish cliffs, which reminded him of those he had seen in some picture; but what the picture was Mr. Wace was unable to ascertain. These cliffs passed north and south—he could tell the points of the compass by the stars that were visible of a night—receding in an almost illimitable perspective and fading into the mists of the distance before they met. He was nearer the eastern set of cliffs, on the occasion of his first

vision the sun was rising over them, and black against the sunlight and pale against their shadow appeared a multitude of soaring forms that Mr. Cave regarded as birds. A vast range of buildings spread below him; he seemed to be looking down upon them; and, as they approached the blurred and refracted edge of the picture, they became indistinct. There were also trees curious in shape, and in colouring a deep mossy green and an exquisite grey, beside a wide and shining canal. And something great and brilliantly coloured flew across the picture. But the first time Mr. Cave saw these pictures he saw only in flashes, his hands shook, his head moved, the vision came and went, and grew foggy and indistinct. And at first he had the greatest difficulty in finding the picture again once the direction of it was lost.

His next clear vision, which came about a week after the first, the interval having yielded nothing but tantalising glimpses and some useful experience, showed him the view down the length of the valley. The view was different, but he had a curious persuasion, which his subsequent observations abundantly confirmed, that he was regarding this strange world from exactly the same spot, although he was looking in a different direction. The long façade of the great building, whose roof he had looked down upon before, was now receding in perspective. He recognised the roof. In the front of the façade was a terrace of massive proportions and extraordinary length, and down the middle of the terrace, at certain intervals, stood huge but very graceful masts, bearing small shiny objects which reflected the setting sun. The import of these small objects did not occur to Mr. Cave until some time after, as he was describing the scene to Mr. Wace. The terrace overhung a thicket of the most luxuriant and graceful vegetation, and beyond this was a wide grassy lawn on which certain broad creatures, in form like beetles but enormously larger, reposed. Beyond this again was a richly decorated causeway of pinkish stone; and beyond that, and lined with dense red weeds, and passing up the valley exactly parallel with the distant cliffs, was a broad and mirror-like expanse of water. The air seemed full of squadrons of great birds, manœuvring in stately curves; and across the river was a multitude of splendid buildings, richly coloured and glittering with metallic tracery and facets, among a forest of moss-like and lichenous trees. And suddenly something flapped repeatedly across the vision, like the fluttering of a jewelled fan or the beating of a wing, and a face, or rather the upper part of a face with very large eyes, came as it were close to his own and as if on the other side of the crystal. Mr. Cave was so startled and so impressed by the absolute reality of these eyes, that he drew his head back from the crystal to look behind it. He had become so absorbed in watching that he was quite surprised to find himself in the cool darkness of his little shop, with its familiar odour of methyl,

mustiness, and decay. And, as he blinked about him, the glowing crystal faded, and went out.

Such were the first general impressions of Mr. Cave. The story is curiously direct and circumstantial. From the outset, when the valley first flashed momentarily on his senses, his imagination was strangely affected, and, as he began to appreciate the details of the scene he saw, his wonder rose to the point of a passion. He went about his business listless and distraught, thinking only of the time when he should be able to return to his watching. And then a few weeks after his first sight of the valley came the two customers, the stress and excitement of their offer, and the narrow escape of the crystal from sale, as I have already told.

Now while the thing was Mr. Cave's secret, it remained a mere wonder, a thing to creep to covertly and peep at, as a child might peep upon a forbidden garden. But Mr. Wace has, for a young scientific investigator, a particularly lucid and consecutive habit of mind. Directly the crystal and its story came to him, and he had satisfied himself, by seeing the phosphorescence with his own eyes, that there really was a certain evidence for Mr. Cave's statements, he proceeded to develop the matter systematically. Mr. Cave was only too eager to come and feast his eyes on this wonderland he saw, and he came every night from half-past eight until half-past ten, and sometimes, in Mr. Wace's absence, during the day. On Sunday afternoons, also, he came. From the outset Mr. Wace made copious notes, and it was due to his scientific method that the relation between the direction from which the initiating ray entered the crystal and the orientation of the picture was proved. And, by covering the crystal in a box perforated only with a small aperture to admit the exciting ray, and by substituting black holland for his buff blinds, he greatly improved the conditions of the observations; so that in a little while they were able to survey the valley in any direction they desired.

So having cleared the way, we may give a brief account of this visionary world within the crystal. The things were in all cases seen by Mr. Cave, and the method of working was invariably for him to watch the crystal and report what he saw, while Mr. Wace (who as a science student had learnt the trick of writing in the dark) wrote a brief note of his report. When the crystal faded, it was put into its box in the proper position and the electric light turned on. Mr. Wace asked questions, and suggested observations to clear up difficult points. Nothing, indeed, could have been less visionary and more matter-of-fact.

The attention of Mr. Cave had been speedily directed to the bird-like creatures he had seen so abundantly present in each of his earlier visions. His first impression was soon corrected, and he considered for a time that they might represent a diurnal species of bat. Then he thought, grotesquely enough, th

they might be cherubs. Their heads were round, and curiously human, and it was the eyes of one of them that had so startled him on his second observation. They had broad, silvery wings, not feathered, but glistening almost as brilliantly as new-killed fish and with the same subtle play of colour, and these wings were not built on the plan of bird-wing or bat, Mr. Wace learned, but supported by curved ribs radiating from the body. (A sort of butterfly wing with curved ribs seems best to express their appearance.) The body was small, but fitted with two bunches of prehensile organs, like long tentacles, immediately under the mouth. Incredible as it appeared to Mr. Wace, the persuasion at last became irresistible, that it was these creatures which owned the great quasi-human buildings and the magnificent garden that made the broad valley so splendid. And Mr. Cave perceived that the buildings, with other peculiarities, had no doors, but that the great circular windows, which opened freely, gave the creatures egress and entrance. They would alight upon their tentacles, fold their wings to a smallness almost rod-like, and hop into the interior. But among them was a multitude of smaller-winged creatures, like great dragon-flies and moths and flying beetles, and across the greensward brilliantly-coloured gigantic ground-beetles crawled lazily to and fro. Moreover, on the causeways and terraces, large-headed creatures similar to the greater winged flies, but wingless, were visible, hopping busily upon their hand-like tangle of tentacles.

Allusion has already been made to the glittering objects upon masts that stood upon the terrace of the nearer building. It dawned upon Mr. Cave, after regarding one of these masts very fixedly on one particularly vivid day, that the glittering object there was a crystal exactly like that into which he peered. And a still more careful scrutiny convinced him that each one in a vista of nearly twenty carried a similar object.

Occasionally one of the large flying creatures would flutter up to one, and, folding its wings and coiling a number of its tentacles about the mast, would regard the crystal fixedly for a space—sometimes for as long as fifteen minutes. And a series of observations, made at the suggestion of Mr. Wace, convinced both watchers that, so far as this visionary world was concerned, the crystal into which they peered actually stood at the summit of the end-most mast on the terrace, and that on one occasion at least one of these inhabitants of this other world had looked into Mr. Cave's face while he was making these observations.

So much for the essential facts of this very singular story. Unless we dismiss it all as the ingenious fabrication of Mr. Wace, we have to believe one of two things: either that Mr. Cave's crystal was in two worlds at once, and that, while it was carried about in one, it remained stationary in the other, which seems altogether absurd; or else that it had some peculiar relation of

sympathy with another and exactly similar crystal in this other world, so that what was seen in the interior of the one in this world was, under suitable conditions, visible to an observer in the corresponding crystal in the other world ; and *vice versa*. At present, indeed, we do not know of any way in which two crystals could so come *en rapport*, but nowadays we know enough to understand that the thing is not altogether impossible. This view of the crystals as *en rapport* was the supposition that occurred to Mr. Wace, and to me at least it seems extremely plausible. . . .

And where was this other world ? On this, also, the alert intelligence of Mr. Wace speedily threw light. After sunset, the sky darkened rapidly—there was a very brief twilight interval indeed—and the stars shone out. They were recognisably the same as those we see, arranged in the same constellations. Mr. Cave recognised the Bear, the Pleiades, Aldebaran, and Sirius : so that the other world must be somewhere in the solar system, and, at the utmost, only a few hundreds of millions of miles from our own. Following up this clue, Mr. Wace learned that the midnight sky was a darker blue even than our midwinter sky, and that the sun seemed a little smaller. *And there were two small moons!* “like our moon but smaller, and quite differently marked” one of which moved so rapidly that its motion was clearly visible as one regarded it. These moons were never high in the sky, but vanished as they rose : that is, every time they revolved they were eclipsed because they were so near their primary planet. And all this answers quite completely, although Mr. Cave did not know it, to what must be the condition of things on Mars.

Indeed, it seems an exceedingly plausible conclusion that peering into this crystal Mr. Cave did actually see the planet Mars and its inhabitants. And, if that be the case, then the evening star that shone so brilliantly in the sky of that distant vision, was neither more nor less than our own familiar earth.

For a time the Martians—if they were Martians—do not seem to have known of Mr. Cave's inspection. Once or twice one would come to peer, and go away very shortly to some other mast, as though the vision was unsatisfactory. During this time Mr. Cave was able to watch the proceedings of these winged people without being disturbed by their attentions, and, although his report is necessarily vague and fragmentary, it is nevertheless very suggestive. Imagine the impression of humanity a Martian observer would get who, after a difficult process of preparation and with considerable fatigue to the eyes, was able to peer at London from the steeple of St. Martin's Church for stretches, at longest, of four minutes at a time. Mr. Cave was unable to ascertain if the winged Martians were the same as the Martians who hopped about the causeways and terraces, and if the latter could put on wings at will. He several times saw certain clumsy bipeds, dimly suggestive

apes, white and partially translucent, feeding among certain of the lichenous trees, and once some of these fled before one of the hopping, round-headed Martians. The latter caught one in its tentacles, and then the picture faded suddenly and left Mr. Cave most tantalisingly in the dark. On another occasion a vast thing that Mr. Cave thought at first was some gigantic insect, appeared advancing along the causeway beside the canal with extraordinary rapidity. As this drew nearer Mr. Cave perceived that it was a mechanism of shining metals and of extraordinary complexity. And then, when he looked again, it had passed out of sight.

After a time Mr. Wace aspired to attract the attention of the Martians, and the next time that the strange eyes of one of them appeared close to the crystal Mr. Cave cried out and sprang away, and they immediately turned on the light and began to gesticulate in a manner suggestive of signalling. But when at last Mr. Cave examined the crystal again the Martian had departed.

Thus far these observations had progressed in early November, and then Mr. Cave, feeling that the suspicions of his family about the crystal were allayed, began to take it to and fro with him in order that, as occasion arose in the daytime or night, he might comfort himself with what was fast becoming the most real thing in his existence.

In December Mr. Wace's work in connection with a forthcoming examination became heavy, the sittings were reluctantly suspended for a week, and for ten or eleven days—he is not quite sure which—he saw nothing of Cave. He then grew anxious to resume these investigations, and, the stress of his seasonal labours being abated, he went down to Seven Dials. At the corner he noticed a shutter before a bird fancier's window, and then another at a cobbler's. Mr. Cave's shop was closed.

He rapped and the door was opened by the step-son in black. He at once called Mrs. Cave, who was, Mr. Wace could not but observe, in cheap but ample widow's weeds of the most imposing pattern. Without any very great surprise Mr. Wace learnt that Cave was dead, and already buried. She was in tears, and her voice was a little thick. She had just returned from Highgate. Her mind seemed occupied with her own prospects and the honourable details of the obsequies, but Mr. Wace was at last able to learn the particulars of Cave's death. He had been found dead in his shop in the early morning, the day after his last visit to Mr. Wace, and the crystal had been clasped in his stone-cold hands. His face was smiling, said Mrs. Cave, and the velvet cloth from the minerals lay on the floor at his feet. He must have been dead five or six hours when he was found.

This came as a great shock to Wace, and he began to reproach himself bitterly for having neglected the plain symptoms

of the old man's ill-health. But his chief thought was of the crystal. He approached that topic in a gingerly manner, because he knew Mrs. Cave's peculiarities. He was dumb-founded to learn that it was sold.

Mrs. Cave's first impulse, directly Cave's body had been taken upstairs, had been to write to the mad clergyman who had offered five pounds for the crystal, informing him of its recovery; but after a violent hunt in which her daughter joined her, they were convinced of the loss of his address. As they were without the means required to mourn and bury Cave in the elaborate style the dignity of an old Seven Dials inhabitant demands, they had appealed to a friendly fellow-tradesman in Great Portland Street. He had very kindly taken over a portion of the stock at a valuation. The valuation was his own and the crystal egg was included in one of the lots. Mr. Wace, after a few suitable consolatory observations, a little off-handedly proffered perhaps, hurried at once to Great Portland Street. But there he learned that the crystal egg had already been sold to a tall, dark man in grey. And there the material facts in this curious, and to me at least very suggestive, story come abruptly to an end. The Great Portland Street dealer did not know who the tall dark man in grey was, nor had he observed him with sufficient attention to describe him minutely. He did not even know which way this person had gone after leaving the shop. For a time Mr. Wace remained in the shop, trying the dealer's patience with hopeless questions, venting his own exasperation. And at last, realising abruptly that the whole thing had passed out of his hands, had vanished like a vision of the night, he returned to his own rooms, a little astonished to find the notes he had made still tangible and visible upon his untidy table.

His annoyance and disappointment were naturally very great. He made a second call (equally ineffectual) upon the Great Portland Street dealer, and he resorted to advertisements in such periodicals as were likely to come into the hands of a bric-à-brac collector. He also wrote letters to *The Daily Chronicle* and *Nature*, but both those periodicals, suspecting a hoax, asked him to reconsider his action before they printed, and he was advised that such a strange story, unfortunately so bare of supporting evidence, might imperil his reputation as an investigator. Moreover, the calls of his proper work were urgent. So that after a month or so, save for an occasional reminder to certain dealers, he had reluctantly to abandon the quest for the crystal egg, and from that day to this it remains undiscovered. Occasionally however, he tells me, and I can quite believe him, he has bursts of zeal in which he abandons his more urgent occupation and resumes the search.

Whether or not it will remain lost for ever, with the material and origin of it, are things equally speculative at the present time. If the present purchaser is a collector, one would have

expected the inquiries of Mr. Wace to have reached him through the dealers. He has been able to discover Mr. Cave's clergyman and "Oriental"—no other than the Rev. James Parker and the young Prince of Bosso-Kuni in Java. I am obliged to them for certain particulars. The object of the Prince was simply curiosity—and extravagance. He was so eager to buy, because Cave was so oddly reluctant to sell. It is just as possible that the buyer in the second instance was simply a casual purchaser and not a collector at all, and the crystal egg, for all I know, may at the present moment be within a mile of me, decorating a drawing-room or serving as a paper-weight—its remarkable functions all unknown. Indeed, it is partly with the idea of such a possibility that I have thrown this narrative into a form that will give it a chance of being read by the ordinary consumer of fiction.

My own ideas in the matter are practically identical with those of Mr. Wace. I believe the crystal on the mast in Mars and the crystal egg of Mr. Cave's to be in some physical, but at present quite inexplicable, way *en rapport*, and we both believe further that the terrestrial crystal must have been—possibly at some remote date—sent hither from that planet, in order to give the Martians a near view of our affairs. Possibly the fellows to the crystals in the other masts are also on our globe. No theory of hallucination suffices for the facts.

STORY THIRTY-SIX

THE STAR

IT was on the first day of the new year that the announcement was made, almost simultaneously from three observatories, that the motion of the planet Neptune, the outermost of all the planets that wheel about the sun, had become very erratic. Ogilvy had already called attention to a suspected retardation in its velocity in December. Such a piece of news was scarcely calculated to interest a world the greater portion of whose inhabitants were unaware of the existence of the planet Neptune, nor outside the astronomical profession did the subsequent discovery of a faint remote speck of light in the region of the perturbed planet cause any very great excitement. Scientific people, however, found the intelligence remarkable enough, even before it became known that the new body was rapidly growing larger and brighter, that its motion was quite different from the orderly progress of the planets, and that the deflection of Neptune and its satellite was becoming now of an unprecedented kind.

Few people without a training in science can realise the huge isolation of the solar system. The sun with its specks of planets, its dust of planetoids, and its impalpable comets, swims in a vacant immensity that almost defeats the imagination. Beyond the orbit of Neptune there is space, vacant so far as human observation has penetrated, without warmth or light or sound, blank emptiness, for twenty million times a million miles. That is the smallest estimate of the distance to be traversed before the very nearest of the stars is attained. And, saving a few comets more unsubstantial than the thinnest flame, no matter had ever to human knowledge crossed this gulf of space, until early in the twentieth century this strange wanderer appeared. A vast mass of matter it was, bulky, heavy, rushing without warning out of the black mystery of the sky into the radiance of the sun. By the second day it was clearly visible to any decent instrument, as a speck with a barely sensible diameter, in the constellation Leo near Regulus. In a little while an opera-glass could attain it.

On the third day of the new year the newspaper readers of two hemispheres were made aware for the first time of the real importance of this unusual apparition in the heavens. "A Planetary Collision," one London paper headed the news, and proclaimed Duchaine's opinion that this strange new planet would probably collide with Neptune. The leader writers enlarged upon the topic. So that in most of the capitals of the world, on January 3rd, there was an expectation, however vague, of some imminent phenomenon in the sky; and as the night followed the sunset round the globe, thousands of men

turned their eyes skyward to see—the old familiar stars just as they had always been.

Until it was dawn in London and Pollux setting and the stars overhead grown pale. The winter's dawn it was, a sickly filtering accumulation of daylight, and the light of gas and candles shone yellow in the windows to show where people were astir. But the yawning policeman saw the thing, the busy crowds in the markets stopped agape, workmen going to their work betimes, milkmen, the drivers of news-carts, dissipation going home jaded and pale, homeless wanderers, sentinels on their beats, and in the country, labourers trudging afield, poachers slinking home, all over the dusky quickening country it could be seen—and out at sea by seamen watching for the day—a great white star, come suddenly into the westward sky!

Brighter it was than any star in our skies; brighter than the evening star at its brightest. It still glowed out white and large, no mere twinkling spot of light, but a small round clear shining disc, an hour after the day had come. And where science has not reached, men stared and feared, telling one another of the wars and pestilences that are foreshadowed by these fiery signs in the Heavens. Sturdy Boers, dusky Hottentots, Gold Coast negroes, Frenchmen, Spaniards, Portuguese, stood in the warmth of the sunrise watching the setting of this strange new star.

And in a hundred observatories there had been suppressed excitement, rising almost to shouting pitch, as the two remote bodies had rushed together, and a hurrying to and fro to gather photographic apparatus and spectroscope, and this appliance and that, to record this novel astonishing sight, the destruction of a world. For it was a world, a sister planet of our earth, far greater than our earth indeed, that had so suddenly flashed into flaming death. Neptune it was, had been struck, fairly and squarely, by the strange planet from outer space, and the heat of the concussion had incontinently turned two solid globes into one vast mass of incandescence. Round the world that day, two hours before the dawn, went the pallid great white star, fading only as it sank westward and the sun mounted above it. Everywhere men marvelled at it, but of all those who saw it none could have marvelled more than those sailors, habitual watchers of the stars, who far away at sea had heard nothing of its advent and saw it now rise like a pigmy moon and climb zenithward and hang overhead and sink westward with the passing of the night.

And when next it rose over Europe everywhere were crowds of watchers on hilly slopes, on house-roofs, in open spaces, staring eastward for the rising of the great new star. It rose with a white glow in front of it, like the glare of a white fire, and those who had seen it come into existence the night before cried out at the sight of it. "It is larger," they cried. "It is brighter!" And indeed, the moon a quarter full and sinking

in the west was in its apparent size beyond comparison, but scarcely in all its breadth had it as much brightness now as the little circle of the strange new star.

"It is brighter!" cried the people clustering in the streets. But in the dim observatories the watchers held their breath and peered at one another. "*It is nearer,*" they said. "*Nearer!*"

And voice after voice repeated, "It is nearer," and the clicking telegraph took that up, and it trembled along telephone wires, and in a thousand cities grimy compositors fingered the type. "It is nearer." Men writing in offices, struck with a strange realisation, flung down their pens, men talking in a thousand places suddenly came upon a grotesque possibility in those words, "It is nearer." It hurried along awakening streets, it was shouted down the frost-stilled ways of quiet villages, men who had read these things from the throbbing tape stood in yellow-lit doorways shouting the news to the passers-by. "It is nearer." Pretty women, flashed and glittering, heard the news told jestingly between the dances, and feigned an intelligent interest they did not feel. "Nearer! Indeed. How curious! How very, very clever people must be to find out things like that!"

Lonely tramps facing through the wintry night murmured those words to comfort themselves—looking skyward. "It has need to be nearer, for the night's as cold as charity. Don't seem much warmth from it if it *is* nearer, all the same."

"What is a new star to me?" cried the weeping woman kneeling beside her dead.

The schoolboy, rising early for his examination work, puzzled it out for himself—with the great white star, shining broad and bright through the frost-flowers of his window. "Centrifugal, centripetal," he said, with his chin on his fist. "Stop a planet in its flight, rob it of its centrifugal force, what then? Centripetal has it, and down it falls into the sun! And this——!"

"Do we come in the way? I wonder——"

The light of that day went the way of its brethren, and with the later watches of the frosty darkness rose the strange star again. And it was now so bright that the waxing moon seemed but a pale yellow ghost of itself, hanging huge in the sunset. In a South African city a great man had married, and the streets were alight to welcome his return with his bride. "Even the skies have illuminated," said the flatterer. Under Capricorn, two negro lovers, daring the wild beasts and evil spirits for love of one another, crouched together in a cane brake where the fire-flies hovered. "That is our star," they whispered, and felt strangely comforted by the sweet brilliance of its light.

The master mathematician sat in his private room and pushed the papers from him. His calculations were already finished. In a small white phial there still remained a little of

the drug that had kept him awake and active for four long nights. Each day, serene, explicit, patient as ever, he had given his lecture to his students, and then had come back at once to this momentous calculation. His face was grave, a little drawn and hectic from his drugged activity. For some time he seemed lost in thought. Then he went to the window, and the blind went up with a click. Half-way up the sky, over the clustering roofs, chimneys, and steeples of the city, hung the star.

He looked at it as one might look into the eyes of a brave enemy. "You may kill me," he said after a silence. "But I can hold you—and all the universe for that matter—in the grip of this little brain. I would not change. Even now."

He looked at the little phial. "There will be no need of sleep again," he said. The next day at noon, punctual to the minute, he entered his lecture theatre, put his hat on the end of the table as his habit was, and carefully selected a large piece of chalk. It was a joke among his students that he could not lecture without that piece of chalk to fumble in his fingers, and once he had been stricken to impotence by their hiding his supply. He came and looked under his grey eyebrows at the rising tiers of young fresh faces, and spoke with his accustomed studied commonness of phrasing. "Circumstances have arisen—circumstances beyond my control," he said and paused, "which will debar me from completing the course I had designed. It would seem, gentlemen, if I may put the thing clearly and briefly, that—Man has lived in vain."

The students glanced at one another. Had they heard aright? Mad? Raised eyebrows and grinning lips there were, but one or two faces remained intent upon his calm grey-fringed face. "It will be interesting," he was saying, "to devote this morning to an exposition, so far as I can make it clear to you, of the calculations that have led me to this conclusion. Let us assume——"

He turned towards the blackboard, meditating a diagram in the way that was usual to him. "What was that about 'lived in vain'?" whispered one student to another. "Listen," said the other, nodding towards the lecturer.

And presently they began to understand.

That night the star rose later, for its proper eastward motion had carried it some way across Leo towards Virgo, and its brightness was so great that the sky became a luminous blue as it rose, and every star was hidden in its turn, save only Jupiter near the zenith, Capella, Aldebaran, Sirius, and the pointers of the Bear. It was very white and beautiful. In many parts of the world that night a pallid halo encircled it about. It was perceptibly larger; in the clear refractive sky of the tropics it seemed as if it were nearly a quarter the size of the moon. The frost was still on the ground in England, but the world was as brightly lit as if it were midsummer moonlight. One could

see to read quite ordinary print by that cold clear light, and in the cities the lamps burnt yellow and wan.

And everywhere the world was awake that night, and throughout Christendom a sombre murmur hung in the keen air over the country-side like the belling of bees in the heather, and this murmurous tumult grew to a clangour in the cities. It was the tolling of the bells in a million belfry towers and steeples, summoning the people to sleep no more, to sin no more, but to gather in their churches and pray. And overhead, growing larger and brighter as the earth rolled on its way and the night passed, rose the dazzling star.

And the streets and houses were alight in all the cities, the shipyards glared, and whatever roads led to high country were lit and crowded all night long. And in all the seas about the civilised lands, ships with throbbing engines, and ships with bellying sails, crowded with men and living creatures, were standing out to ocean and the north. For already the warning of the master mathematician had been telegraphed all over the world, and translated into a hundred tongues. The new planet and Neptune, locked in a fiery embrace, were whirling headlong, ever faster and faster towards the sun. Already every second, this blazing mass flew a hundred miles, and every second its terrific velocity increased. As it flew now, indeed, it must pass a hundred million of miles wide of the earth and scarcely affect it. But near its destined path, as yet only slightly perturbed, spun the mighty planet Jupiter and his moons sweeping splendid round the sun. Every moment now the attraction between the fiery star and the greatest of the planets grew stronger. And the result of that attraction? Inevitably Jupiter would be deflected from his orbit into an elliptical path, and the burning star, swung by his attraction wide of its sunward rush, would "describe a curved path" and perhaps collide with, and certainly pass very close to, our earth. "Earthquakes, volcanic outbreaks, cyclones, sea waves, floods, and a steady rise in temperature to I know not what limit"—so prophesied the master mathematician.

And overhead, to carry out his words, lonely and cold and livid, blazed the star of the coming doom.

To many who stared at it that night until their eyes ached, it seemed that it was visibly approaching. And that night, too, the weather changed, and the frost that had gripped all Central Europe and France and England softened towards a thaw.

But you must not imagine because I have spoken of people praying through the night and people going aboard ships and people fleeing towards mountainous country that the whole world was already in a terror because of the star. As a matter of fact, use and wont still ruled the world, and save for the talk of idle moments and the splendour of the night, nine human beings out of ten were still busy at their common occupations.

In all the cities the shops, save one here and there, opened and closed at their proper hours, the doctor and the undertaker plied their trades, the workers gathered in the factories, soldiers drilled, scholars studied, lovers sought one another, thieves lurked and fled, politicians planned their schemes. The presses of the newspapers roared through the nights, and many a priest of this church and that would not open his holy building to further what he considered a foolish panic. The newspapers insisted on the lesson of the year 1000—for then, too, people had anticipated the end. The star was no star—mere gas—a comet; and were it a star it could not possibly strike the earth. There was no precedent for such a thing. Common sense was sturdy everywhere, scornful, jesting, a little inclined to persecute the obdurate fearful. That night, at seven-fifteen by Greenwich time, the star would be at its nearest to Jupiter. Then the world would see the turn things would take. The master mathematician's grim warnings were treated by many as so much mere elaborate self-advertisement. Common sense at last, a little heated by argument, signified its unalterable convictions by going to bed. So, too, barbarism and savagery, already tired of the novelty, went about their mighty business, and save for a howling dog here and there, the beast world left the star unheeded.

And yet, when at last the watchers in the European States saw the star rise, an hour later it is true, but no larger than it had been the night before, there were still plenty awake to laugh at the master mathematician—to take the danger as if it had passed.

But hereafter the laughter ceased. The star grew—it grew with a terrible steadiness hour after hour, a little larger each hour, a little nearer the midnight zenith, and brighter and brighter, until it had turned night into a second day. Had it come straight to the earth instead of in a curved path, had it lost no velocity to Jupiter, it must have leapt the intervening gulf in a day, but as it was it took five days altogether to come by our planet. The next night it had become a third the size of the moon before it set to English eyes, and the thaw was assured. It rose over America near the size of the moon, but blinding white to look at, and *hot*; and a breath of hot wind blew now with its rising and gathering strength, and in Virginia, and Brazil, and down the St. Lawrence valley, it shone intermittently through a driving reek of thunder-clouds, flickering violet lightning, and hail unprecedented. In Manitoba was a thaw and devastating floods. And upon all the mountains of the earth the snow and ice began to melt that night, and all the rivers coming out of high country flowed thick and turbid, and soon—in their upper reaches—with swirling trees and the bodies of beasts and men. They rose steadily, steadily in the ghostly brilliance, and came trickling over their banks at last, behind the flying population of their valleys.

And along the coast of Argentina and up the South Atlantic the tides were higher than had ever been in the memory of man, and the storms drove the waters in many cases scores of miles inland, drowning whole cities. And so great grew the heat during the night that the rising of the sun was like the coming of a shadow. The earthquakes began and grew until all down America from the Arctic Circle to Cape Horn, hillsides were sliding, fissures were opening, and houses and walls crumbling to destruction. The whole side of Cotopaxi slipped out in one vast convulsion, and a tumult of lava poured out so high and broad and swift and liquid that in one day it reached the sea.

So the star, with the wan moon in its wake, marched across the Pacific, trailed the thunderstorms like the hem of a robe, and the growing tidal wave that toiled behind it, frothing and eager, poured over island and island and swept them clear of men. Until that wave came at last—in a blinding light and with the breath of a furnace, swift and terrible it came—a wall of water, fifty feet high, roaring hungrily, upon the long coasts of Asia, and swept inland across the plains of China. For a space the star, hotter now and larger and brighter than the sun in its strength, showed with pitiless brilliance the wide and populous country; towns and villages with their pagodas and trees, roads, wide cultivated fields, millions of sleepless people staring in helpless terror at the incandescent sky; and then, low and growing, came the murmur of the flood. And thus it was with millions of men that night—a fight nowhither, with limbs heavy with heat and breath fierce and scant, and the flood like a wall swift and white behind. And then death.

China was lit glowing white, but over Japan and Java and all the islands of Eastern Asia the great star was a ball of dull red fire because of the steam and smoke and ashes the volcanoes were spouting forth to salute its coming. Above was the lava, hot gases and ash, and below the seething floods, and the whole earth swayed and rumbled with the earthquake shocks. Soon the immemorial snows of Thibet and the Himalaya were melting and pouring down by ten million deepening converging channels upon the plains of Burmah and Hindostan. The tangled summits of the Indian jungles were aflame in a thousand places, and below the hurrying waters around the stems were dark objects that still struggled feebly and reflected the blood-red tongues of fire. And in a rudderless confusion a multitude of men and women fled down the broad river-ways to that one last hope of men—the open sea.

Larger grew the star, and larger, hotter, and brighter with a terrible swiftness now. The tropical ocean had lost its phosphorescence, and the whirling steam rose in ghostly wreaths from the black waves that plunged incessantly, speckled with storm-tossed ships.

And then came a wonder. It seemed to those who in Europe

watched for the rising of the star that the world must have ceased its rotation. In a thousand open spaces of down and upland the people who had fled thither from the floods and the falling houses and sliding slopes of hill watched for that rising in vain. Hour followed hour through a terrible suspense, and the star rose not. Once again men set their eyes upon the old constellations they had counted lost to them for ever. In England it was hot and clear overhead, though the ground quivered perpetually, but in the tropics, Sirius and Capella and Aldebaran showed through a veil of steam. And when at last the great star rose near ten hours late, the sun rose close upon it, and in the centre of its white heart was a disc of black.

Over Asia it was the star had begun to fall behind the movement of the sky, and then suddenly, as it hung over India, its light had been veiled. All the plain of India from the mouth of the Indus to the mouths of the Ganges was a shallow waste of shining water that night, out of which rose temples and palaces, mounds and hills, black with people. Every minaret was a clustering mass of people, who fell one by one into the turbid waters, as heat and terror overcame them. The whole land seemed a-wailing, and suddenly there swept a shadow across that furnace of despair, and a breath of cold wind, and a gathering of clouds, out of the cooling air. Men looking up, near blinded, at the star, saw that a black disc was creeping across the light. It was the moon, coming between the star and the earth. And even as men cried to God at this respite, out of the East with a strange inexplicable swiftness sprang the sun. And then star, sun, and moon rushed together across the heavens.

So it was that presently, to the European watchers, star and sun rose close upon each other, drove headlong for a space and then slower, and at last came to rest, star and sun merged into one glare of flame at the zenith of the sky. The moon no longer eclipsed the star but was lost to sight in the brilliance of the sky. And though those who were still alive regarded it for the most part with that dull stupidity that hunger, fatigue, heat and despair engender, there were still men who could perceive the meaning of these signs. Star and earth had been at their nearest, had swung about one another, and the star had passed. Already it was receding, swifter and swifter, in the last stage of its headlong journey downward into the sun.

And then the clouds gathered, blotting out the vision of the sky, the thunder and lightning wove a garment round the world; all over the earth was such a downpour of rain as men had never before seen, and where the volcanoes flared red against the cloud canopy there descended torrents of mud. Everywhere the waters were pouring off the land, leaving mud-silted ruins, and the earth littered like a storm-worn beach with all that had floated, and the dead bodies of the men and brutes, its children. For days the water streamed off the land, sweep

ing away soil and trees and houses in the way, and piling huge dykes and scooping out Titanic gullies over the country-side. Those were the days of darkness that followed the star and the heat. All through them, and for many weeks and months, the earthquakes continued.

But the star had passed, and men, hunger-driven and gathering courage only slowly, might creep back to their ruined cities, buried granaries, and sodden fields. Such few ships as had escaped the storms of that time came stunned and shattered and sounding their way cautiously through the new marks and shoals of once familiar ports. And as the storms subsided men perceived that everywhere the days were hotter than of yore, and the sun larger, and the moon, shrunk to a third of its former size, took now fourscore days between its new and new.

But of the new brotherhood that grew presently among men, of the saving of laws and books and machines, of the strange change that had come over Iceland and Greenland and the shores of Baffin's Bay, so that the sailors coming there presently found them green and gracious, and could scarce believe their eyes, this story does not tell. Nor of the movement of mankind now that the earth was hotter, northward and southward towards the poles of the earth. It concerns itself only with the coming and the passing of the Star.

The Martian astronomers—for there are astronomers on Mars, although they are very different beings from men—were naturally profoundly interested by these things. They saw them from their own standpoint of course. "Considering the mass and temperature of the missile that was flung through our solar system into the sun," one wrote, "it is astonishing what a little damage the earth, which it missed so narrowly, has sustained. All the familiar continental markings and the masses of the seas remain intact, and indeed the only difference seems to be a shrinkage of the white discoloration (supposed to be frozen water) round either pole." Which only shows how small the vastest of human catastrophes may seem, at a distance of a few million miles.

STORY THIRTY-SEVEN

THE MAN WHO COULD WORK MIRACLES

A Pantoum in Prose

It is doubtful whether the gift was innate. For my own part, I think it came to him suddenly. Indeed, until he was thirty he was a sceptic, and did not believe in miraculous powers. And here, since it is the most convenient place, I must mention that he was a little man, and had eyes of a hot brown, very erect red hair, a moustache with ends that he twisted up, and freckles. His name was George McWhurter Fotheringay—not the sort of name by any means to lead to any expectation of miracles—and he was clerk at Gornshott's. He was greatly addicted to assertive argument. It was while he was asserting the impossibility of miracles that he had his first intimation of his extraordinary powers. This particular argument was being held in the bar of the Long Dragon, and Toddy Beamish was conducting the opposition by a monotonous but effective "So *you* say," that drove Mr. Fotheringay to the very limit of his patience.

There were present, besides these two, a very dusty cyclist, landlord Cox, and Miss Maybridge, the perfectly respectable and rather portly barmaid of the Dragon. Miss Maybridge was standing with her back to Mr. Fotheringay, washing glasses; the others were watching him, more or less amused by the present ineffectiveness of the assertive method. Goaded by the Torres Vedras tactics of Mr. Beamish, Mr. Fotheringay determined to make an unusual rhetorical effort. "Looky here, Mr. Beamish," said Mr. Fotheringay. "Let us clearly understand what a miracle is. It's something contrariwise to the course of Nature done by power of Will, something what couldn't happen without being specially willed."

"So *you* say," said Mr. Beamish, repulsing him.

Mr. Fotheringay appealed to the cyclist, who had hitherto been a silent auditor, and received his assent—given with a hesitating cough and a glance at Mr. Beamish. The landlord would express no opinion, and Mr. Fotheringay, returning to Mr. Beamish, received the unexpected concession of a qualified assent to his definition of a miracle.

"For instance," said Mr. Fotheringay, greatly encouraged. "Here would be a miracle. That lamp, in the natural course of nature, couldn't burn like that upsy-down, could it, Beamish?"

"*You* say it couldn't," said Beamish.

"And you?" said Fotheringay. "You don't mean to say—eh?"

"No," said Beamish reluctantly. "No, it couldn't."

"Very well," said Mr. Fotheringay. "Then here comes

some one, as it might be me, along here, and stands as it might be here, and says to that lamp, as I might do, collecting all my will—'Turn upsy-down without breaking, and go on burning steady,' and—— Hullo!"

It was enough to make any one say "Hullo!" The impossible, the incredible, was visible to them all. The lamp hung inverted in the air, burning quietly with its flame pointing down. It was as solid, as indisputable as ever a lamp was, the prosaic common lamp of the Long Dragon bar.

Mr. Fotheringay stood with an extended forefinger and the knitted brows of one anticipating a catastrophic smash. The cyclist, who was sitting next the lamp, ducked and jumped across the bar. Everybody jumped, more or less. Miss Maybridge turned and screamed. For nearly three seconds the lamp remained still. A faint cry of mental distress came from Mr. Fotheringay. "I can't keep it up," he said, "any longer." He staggered back, and the inverted lamp suddenly flared, fell against the corner of the bar, bounced aside, smashed upon the floor, and went out.

It was lucky it had a metal receiver, or the whole place would have been in a blaze. Mr. Cox was the first to speak, and his remark, shorn of needless excrescences, was to the effect that Fotheringay was a fool. Fotheringay was beyond disputing even so fundamental a proposition as that! He was astonished beyond measure at the thing that had occurred. The subsequent conversation threw absolutely no light on the matter so far as Fotheringay was concerned; the general opinion not only followed Mr. Cox very closely but very vehemently. Every one accused Fotheringay of a silly trick, and presented him to himself as a foolish destroyer of comfort and security. His mind was in a tornado of perplexity, he was himself inclined to agree with them, and he made a remarkably ineffectual opposition to the proposal of his departure.

He went home flushed and heated, coat-collar crumpled, eyes smarting and ears red. He watched each of the ten street lamps nervously as he passed it. It was only when he found himself alone in his little bedroom in Church Row that he was able to grapple seriously with his memories of the occurrence, and ask, "What on earth happened?"

He had removed his coat and boots, and was sitting on the bed with his hands in his pockets repeating the text of his defence for the seventeenth time, "*I didn't want the confounded thing to upset,*" when it occurred to him that at the precise moment he had said the commanding words he had inadvertently willed the thing he said, and that when he had seen the lamp in the air he had felt that it depended on him to maintain it there without being clear how this was to be done. He had not a particularly complex mind, or he might have stuck for a time at that "*inadvertently willed,*" embracing, as it does, the abstrusest problems of voluntary action; but as it was, the

idea came to him with a quite acceptable haziness. And from that, following, as I must admit, no clear logical path, he came to the test of experiment.

He pointed resolutely to his candle and collected his mind, though he felt he did a foolish thing. "Be raised up," he said. But in a second that feeling vanished. The candle was raised, hung in the air one giddy moment, and as Mr. Fotheringay gasped, fell with a smash on his toilet-table, leaving him in darkness save for the expiring glow of its wick.

For a time Mr. Fotheringay sat in the darkness, perfectly still. "It did happen, after all," he said. "And 'ow I'm to explain it I *don't* know." He sighed heavily, and began feeling in his pockets for a match. He could find none, and he rose and groped about the toilet-table. "I wish I had a match," he said. He resorted to his coat, and there were none there, and then it dawned upon him that miracles were possible even with matches. He extended a hand and scowled at it in the dark. "Let there be a match in that hand," he said. He felt some light object fall across his palm, and his fingers closed upon a match.

After several ineffectual attempts to light this, he discovered it was a safety-match. He threw it down, and then it occurred to him that he might have willed it lit. He did, and perceived it burning in the midst of his toilet-table mat. He caught it up hastily, and it went out. His perception of possibilities enlarged, and he felt for and replaced the candle in its candlestick. "Here! *you* be lit," said Mr. Fotheringay, and forthwith the candle was flaring, and he saw a little black hole in the toilet-cover, with a wisp of smoke rising from it. For a time he stared from this to the little flame and back, and then looked up and met his own gaze in the looking-glass. By this help he communed with himself in silence for a time.

"How about miracles now?" said Mr. Fotheringay at last, addressing his reflection.

The subsequent meditations of Mr. Fotheringay were of a severe but confused description. So far as he could see, it was a case of pure willing with him. The nature of his first experiences disinclined him for any further experiments except of the most cautious type. But he lifted a sheet of paper, and turned a glass of water pink and then green, and he created a snail, which he miraculously annihilated, and got himself a miraculous new tooth-brush. Somewhen in the small hours he had reached the fact that his will-power must be of a particularly rare and pungent quality, a fact of which he had certainly had inklings before, but no certain assurance. The scare and perplexity of his first discovery was now qualified by pride in this evidence of singularity and by vague intimations of advantage. He became aware that the church clock was striking one, and as it did not occur to him that his daily duties at Gomshott's might be miraculously dispensed with, he resumed undressing, in order

to get to bed without further delay. As he struggled to get his shirt over his head, he was struck with a brilliant idea. "Let me be in bed," he said, and found himself so. "Undressed," he stipulated; and, finding the sheets cold, added hastily, "and in my nightshirt—no, in a nice soft woollen nightshirt. Ah!" he said with immense enjoyment. "And now let me be comfortably asleep. . . ."

He awoke at his usual hour and was pensive all through breakfast-time, wondering whether his overnight experience might not be a particularly vivid dream. At length his mind turned again to cautious experiments. For instance, he had three eggs for breakfast; two his landlady had supplied, good, but shabby, and one was a delicious fresh goose-egg, laid, cooked, and served by his extraordinary will. He hurried off to Gomshott's in a state of profound but carefully concealed excitement, and only remembered the shell of the third egg when his landlady spoke of it that night. All day he could do no work because of this astonishingly new self-knowledge, but this caused him no inconvenience, because he made up for it miraculously in his last ten minutes.

As the day wore on his state of mind passed from wonder to elation, albeit the circumstances of his dismissal from the Long Dragon were still disagreeable to recall, and a garbled account of the matter that had reached his colleagues led to some badinage. It was evident he must be careful how he lifted frangible articles, but in other ways his gift promised more and more as he turned it over in his mind. He intended among other things to increase his personal property by unostentatious acts of creation. He called into existence a pair of very splendid diamond studs, and hastily annihilated them again as young Gomshott came across the counting-house to his desk. He was afraid young Gomshott might wonder how he had come by them. He saw quite clearly the gift required caution and watchfulness in its exercise, but so far as he could judge the difficulties attending its mastery would be no greater than those he had already faced in the study of cycling. It was that analogy, perhaps, quite as much as the feeling that he would be unwelcome in the Long Dragon, that drove him out after supper into the lane beyond the gas-works, to rehearse a few miracles in private.

There was possibly a certain want of originality in his attempts, for apart from his will-power Mr. Fotheringay was not a very exceptional man. The miracle of Moses' rod came to his mind, but the night was dark and unfavourable to the proper control of large miraculous snakes. Then he recollected the story of "Tannhäuser" that he had read on the back of the Philharmonic programme. That seemed to him singularly attractive and harmless. He stuck his walking-stick—a very nice Poona-Penang lawyer—into the turf that edged the footpath, and commanded the dry wood to blossom. The air was

immediately full of the scent of roses, and by means of a match he saw for himself that this beautiful miracle was indeed accomplished. His satisfaction was ended by advancing footsteps. Afraid of a premature discovery of his powers, he addressed the blossoming stick hastily: "Go back." What he meant was "Change back"; but of course he was confused. The stick receded at a considerable velocity, and incontinently came a cry of anger and a bad word from the approaching person. "Who are you throwing brambles at, you fool?" cried a voice. "That got me on the shin."

"I'm sorry, old chap," said Mr. Fotheringay, and then realising the awkward nature of the explanation, caught nervously at his moustache. He saw Winch, one of the three Immerring constables, advancing.

"What d'yer mean by it?" asked the constable. "Hullo! It's you, is it? The gent that broke the lamp at the Long Dragon!"

"I don't mean anything by it," said Mr. Fotheringay. "Nothing at all."

"What d'yer do it for then?"

"Oh, bother!" said Mr. Fotheringay.

"Bother indeed! D'yer know that stick hurt? What d'yer do it for, eh?"

For the moment Mr. Fotheringay could not think what he had done it for. His silence seemed to irritate Mr. Winch. "You've been assaulting the police, young man, this time. That's what *you* done."

"Look here, Mr. Winch," said Mr. Fotheringay, annoyed and confused, "I'm very sorry. The fact is——"

"Well?"

He could think of no way but the truth. "I was working a miracle." He tried to speak in an off-hand way, but try as he would he couldn't.

"Working a——! 'Ere, don't you talk rot. Working a miracle, indeed! Miracle! Well, that's downright funny! Why, you's the chap that don't believe in miracles. . . . Fact is, this is another of your silly conjuring tricks—that's what this is. Now, I tell you——"

But Mr. Fotheringay never heard what Mr. Winch was going to tell him. He realised he had given himself away, flung his valuable secret to all the winds of heaven. A violent gust of irritation swept him to action. He turned on the constable swiftly and fiercely. "Here," he said, "I've had enough of this, I have! I'll show you a silly conjuring trick, I will! Go to Hades! Go, now!"

He was alone!

Mr. Fotheringay performed no more miracles that night, nor did he trouble to see what had become of his flowering stick. He returned to the town, scared and very quiet, and went to his bedroom. "Lord!" he said, "it's a powerful gift—an

extremely powerful gift. I didn't hardly mean as much as that. Not really. . . . I wonder what Hades is like ! ”

He sat on the bed taking off his boots. Struck by a happy thought he transferred the constable to San Francisco, and without any more interference with normal causation went soberly to bed. In the night he dreamt of the anger of Winch.

The next day Mr. Fotheringay heard two interesting items of news. Some one had planted a most beautiful climbing rose against the elder Mr. Gomshott's private house in the Lullaborough Road, and the river as far as Rawling's Mill was to be dragged for Constable Winch.

Mr. Fotheringay was abstracted and thoughtful all that day, and performed no miracles except certain provisions for Winch, and the miracle of completing his day's work with punctual perfection in spite of all the bee-swarm of thoughts that hummed through his mind. And the extraordinary abstraction and meekness of his manner was remarked by several people, and made a matter for jesting. For the most part he was thinking of Winch.

On Sunday evening he went to chapel, and oddly enough, Mr. Maydig, who took a certain interest in occult matters, preached about “things that are not lawful.” Mr. Fotheringay was not a regular chapel goer, but the system of assertive scepticism, to which I have already alluded, was now very much shaken. The tenor of the sermon threw an entirely new light on these novel gifts, and he suddenly decided to consult Mr. Maydig immediately after the service. So soon as that was determined, he found himself wondering why he had not done so before.

Mr. Maydig, a lean, excitable man with quite remarkably long wrists and neck, was gratified at a request for a private conversation from a young man whose carelessness in religious matters was a subject for general remark in the town. After a few necessary delays, he conducted him to the study of the Manse, which was contiguous to the chapel, seated him comfortably, and, standing in front of a cheerful fire—his legs threw a Rhodian arch of shadow on the opposite wall—requested Mr. Fotheringay to state his business.

At first Mr. Fotheringay was a little abashed, and found some difficulty in opening the matter. “You will scarcely believe me, Mr. Maydig, I am afraid——” and so forth for some time. He tried a question at last, and asked Mr. Maydig his opinion of miracles.

Mr. Maydig was still saying “Well” in an extremely judicial tone, when Mr. Fotheringay interrupted again: “You don't believe, I suppose, that some common sort of person—like myself, for instance—as it might be sitting here now, might have some sort of twist inside him that made him able to do things by his will.”

"It's possible," said Mr. Maydig. "Something of the sort, perhaps, is possible."

"If I might make free with something here, I think I might show you by a sort of experiment," said Mr. Fotheringay. "Now, take that tobacco-jar on the table, for instance. What I want to know is whether what I am going to do with it is a miracle or not. Just half a minute, Mr. Maydig, please."

He knitted his brows, pointed to the tobacco-jar and said: "Be a bowl of v'lets."

The tobacco-jar did as it was ordered.

Mr. Maydig started violently at the change, and stood looking from the thaumaturgist to the bowl of flowers. He said nothing. Presently he ventured to lean over the table and smell the violets; they were fresh-picked and very fine ones. Then he stared at Mr. Fotheringay again.

"How did you do that?" he asked.

Mr. Fotheringay pulled his moustache. "Just told it—and there you are. Is that a miracle, or is it black art, or what is it? And what do you think's the matter with me? That's what I want to ask."

"It's a most extraordinary occurrence."

"And this day last week I knew no more that I could do things like that than you did. It came quite sudden. It's something odd about my will, I suppose, and that's as far as I can see."

"Is *that*—the only thing. Could you do other things besides that?"

"Lord, yes!" said Mr. Fotheringay. "Just anything." He thought, and suddenly recalled a conjuring entertainment he had seen. "Here!" He pointed. "Change into a bowl of fish—no, not that—change into a glass bowl full of water with goldfish swimming in it. That's better! You see that, Mr. Maydig?"

"It's astonishing. It's incredible. You are either a most extraordinary . . . But no——"

"I could change it into anything," said Mr. Fotheringay.

"Just anything. Here! be a pigeon, will you?"

In another moment a blue pigeon was fluttering round the room and making Mr. Maydig duck every time it came near him. "Stop there, will you," said Mr. Fotheringay; and the pigeon hung motionless in the air. "I could change it back to a bowl of flowers," he said, and after replacing the pigeon on the table worked that miracle. "I expect you will want your pipe in a bit," he said, and restored the tobacco-jar.

Mr. Maydig had followed all these later changes in a sort of ejaculatory silence. He stared at Mr. Fotheringay and, in a very gingerly manner, picked up the tobacco-jar, examined it, replaced it on the table. "*Well!*" was the only expression of his feelings.

"Now, after that it's easier to explain what I came about,"

said Mr. Fotheringay ; and proceeded to a lengthy and involved narrative of his strange experiences, beginning with the affair of the lamp in the Long Dragon and complicated by persistent allusions to Winch. As he went on, the transient pride Mr. Maydig's consternation had caused passed away ; he became the very ordinary Mr. Fotheringay of everyday intercourse again. Mr. Maydig listened intently, the tobacco-jar in his hand, and his bearing changed also with the course of the narrative. Presently, while Mr. Fotheringay was dealing with the miracle of the third egg, the minister interrupted with a fluttering extended hand—

"It is possible," he said. "It is credible. It is amazing, of course, but it reconciles a number of difficulties. The power to work miracles is a gift—a peculiar quality like genius or second sight—hitherto it has come very rarely and to exceptional people. But in this case . . . I have always wondered at the miracles of Mahomet, and at Yogi's miracles, and the miracles of Madame Blavatsky. But, of course ! Yes, it is simply a gift ! It carries out so beautifully the arguments of that great thinker"—Mr. Maydig's voice sank—"his Grace the Duke of Argyll. Here we plumb some profounder law—deeper than the ordinary laws of Nature. Yes—yes. Go on. Go on !"

Mr. Fotheringay proceeded to tell of his misadventure with Winch, and Mr. Maydig, no longer overawed or scared, began to jerk his limbs about and interject astonishment. "It's this what troubled me most," proceeded Mr. Fotheringay ; "it's this I'm most mijitly in want of advice for ; of course he's at San Francisco—wherever San Francisco may be—but of course it's awkward for both of us, as you'll see, Mr. Maydig. I don't see how he can understand what has happened, and I dare say he's scared and exasperated something tremendous, and trying to get at me. I dare say he keeps on starting off to come here. I send him back, by a miracle, every few hours, when I think of it. And of course, that's a thing he won't be able to understand, and it's bound to annoy him ; and, of course, if he takes a ticket every time it will cost him a lot of money. I done the best I could for him, but of course it's difficult for him to put himself in my place. I thought afterwards that his clothes might have got scorched, you know—if Hades is all it's supposed to be—before I shifted him. In that case I suppose they'd have locked him up in San Francisco. Of course I willed him a new suit of clothes on him directly I thought of it. But, you see, I'm already in a deuce of a tangle——"

Mr. Maydig looked serious. "I see you are in a tangle. Yes, it's a difficult position. How you are to end it . . ." He became diffuse and inconclusive.

"However, we'll leave Winch for a little and discuss the larger question. I don't think this is a case of the black art or anything of the sort. I don't think there is any taint of

criminality about it at all, Mr. Fotheringay—none whatever, unless you are suppressing material facts. No, it's miracles—pure miracles—miracles, if I may say so, of the very highest class."

He began to pace the hearthrug and gesticulate, while Mr. Fotheringay sat with his arm on the table and his head on his arm, looking worried. "I don't see how I'm to manage about Winch," he said.

"A gift of working miracles—apparently a very powerful gift," said Mr. Maydig, "will find a way about Winch—never fear. My dear Sir, you are a most important man—a man of the most astonishing possibilities. As evidence, for example! And in other ways, the things you may do . . ."

"Yes, I've thought of a thing or two," said Mr. Fotheringay. "But—some of the things came a bit twisty. You saw that fish at first? Wrong sort of bowl and wrong sort of fish. And I thought I'd ask some one."

"A proper course," said Mr. Maydig, "a very proper course—altogether the proper course." He stopped and looked at Mr. Fotheringay. "It's practically an unlimited gift. Let us test your powers, for instance. If they really *are* . . . If they really are all they seem to be."

And so, incredible as it may seem, in the study of the little house behind the Congregational Chapel, on the evening of Sunday, Nov. 10, 1896, Mr. Fotheringay, egged on and inspired by Mr. Maydig, began to work miracles. The reader's attention is specially and definitely called to the date. He will object, probably has already objected, that certain points in this story are improbable, that if any things of the sort already described had indeed occurred, they would have been in all the papers a year ago. The details immediately following he will find particularly hard to accept, because among other things they involve the conclusion that he or she, the reader in question, must have been killed in a violent and unprecedented manner more than a year ago. Now a miracle is nothing if not improbable, and as a matter of fact the reader *was* killed in a violent and unprecedented manner a year ago. In the subsequent course of this story that will become perfectly clear and credible, as every right-minded and reasonable reader will admit. But this is not the place for the end of the story, being but little beyond the hither side of the middle. And at first the miracles worked by Mr. Fotheringay were timid little miracles—little things with the cups and parlour fitments, as feeble as the miracles of Theosophists, and, feeble as they were, they were received with awe by his collaborator. He would have preferred to settle the Winch business out of hand, but Mr. Maydig would not let him. But after they had worked a dozen of these domestic trivialities, their sense of power grew, their imagination began to show signs of stimulation, and their ambition enlarged. Their first larger enterprise was due to

hunger and the negligence of Mrs. Minchin, Mr. Maydig's housekeeper. The meal to which the minister conducted Mr. Fotheringay was certainly ill-laid and uninviting as refreshment for two industrious miracle-workers; but they were seated, and Mr. Maydig was descanting in sorrow rather than in anger upon his housekeeper's shortcomings, before it occurred to Mr. Fotheringay that an opportunity lay before him. "Don't you think, Mr. Maydig," he said, "if it isn't a liberty, I—"

"My dear Mr. Fotheringay! Of course! No—I didn't think."

Mr. Fotheringay waved his hand. "What shall we have?" he said, in a large, inclusive spirit, and, at Mr. Maydig's order, revised the supper very thoroughly. "As for me," he said, eyeing Mr. Maydig's selection, "I am always particularly fond of a tankard of stout and a nice Welsh rarebit, and I'll order that. I ain't much given to Burgundy," and forthwith stout and Welsh rarebit promptly appeared at his command. They sat long at their supper, talking like equals, as Mr. Fotheringay presently perceived with a glow of surprise and gratification, of all the miracles they would presently do. "And, by the bye, Mr. Maydig," said Mr. Fotheringay, "I might perhaps be able to help you—in a domestic way."

"Don't quite follow," said Mr. Maydig, pouring out a glass of miraculous old Burgundy.

Mr. Fotheringay helped himself to a second Welsh rarebit out of vacancy, and took a mouthful. "I was thinking," he said, "I might be able (*chum, chum*) to work (*chum, chum*) a miracle with Mrs. Minchin (*chum, chum*)—make her a better woman."

Mr. Maydig put down the glass and looked doubtful. "She's— She strongly objects to interference, you know, Mr. Fotheringay. And—as a matter of fact—it's well past eleven and she's probably in bed and asleep. Do you think, on the whole—"

Mr. Fotheringay considered these objections. "I don't see that it shouldn't be done in her sleep."

For a time Mr. Maydig opposed the idea, and then he yielded. Mr. Fotheringay issued his orders, and a little less at their ease, perhaps, the two gentlemen proceeded with their repast. Mr. Maydig was enlarging on the changes he might expect in his housekeeper next day, with an optimism that seemed even to Mr. Fotheringay's supper senses a little forced and hectic, when a series of confused noises from upstairs began. Their eyes exchanged interrogations, and Mr. Maydig left the room hastily. Mr. Fotheringay heard him calling up to his housekeeper and then his footsteps going softly up to her.

In a minute or so the minister returned, his step light, his face radiant. "Wonderful!" he said, "and touching! Most touching!"

He began pacing the hearthrug. "A repentance—a most

touching repentance—through the crack of the door. Poor woman! A most wonderful change! She had got up. She must have got up at once. She had got up out of her sleep to smash a private bottle of brandy in her box. And to confess it too! . . . But this gives us—it opens—a most amazing vista of possibilities. If we can work this miraculous change in her . . .”

“The thing’s unlimited seemingly,” said Mr. Fotheringay. “And about Mr. Winch——”

“Altogether unlimited.” And from the hearthrug Mr. Maydig, waving the Winch difficulty aside, unfolded a series of wonderful proposals—proposals he invented as he went along.

Now what those proposals were does not concern the essentials of this story. Suffice it that they were designed in a spirit of infinite benevolence, the sort of benevolence that used to be called post-prandial. Suffice it, too, that the problem of Winch remained unsolved. Nor is it necessary to describe how far that series got to its fulfilment. There were astonishing changes. The small hours found Mr. Maydig and Mr. Fotheringay careering across the chilly market-square under the still moon, in a sort of ecstasy of thaumaturgy, Mr. Maydig all flap and gesture, Mr. Fotheringay short and bristling, and no longer abashed at his greatness. They had reformed every drunkard in the Parliamentary division, changed all the beer and alcohol to water (Mr. Maydig had overruled Mr. Fotheringay on this point), they had, further, greatly improved the railway communication of the place, drained Flinder’s swamp, improved the soil of One Tree Hill, and cured the Vicar’s wart. And they were going to see what could be done with the injured pier at South Bridge. “The place,” gasped Mr. Maydig, won’t be the same place to-morrow. How surprised and thankful every one will be!” And just at that moment the church clock struck three.

“I say,” said Mr. Fotheringay, “that’s three o’clock! I must be getting back. I’ve got to be at business by eight. And besides, Mrs. Wimms——”

“We’re only beginning,” said Mr. Maydig, full of the sweetness of unlimited power. “We’re only beginning. Think of all the good we’re doing. When people wake——”

“But——” said Mr. Fotheringay.

Mr. Maydig gripped his arm suddenly. His eyes were bright and wild. “My dear chap,” he said, “there’s no hurry. Look”—he pointed to the moon at the zenith—“Joshua!”

“Joshua?” said Mr. Fotheringay.

“Joshua,” said Mr. Maydig. “Why not? Stop it.”

Mr. Fotheringay looked at the moon.

“That’s a bit tall,” he said after a pause.

“Why not?” said Mr. Maydig. “Of course it doesn’t stop. You stop the rotation of the earth, you know. Time stops. It isn’t as if we were doing harm.”

"H'm!" said Mr. Fotheringay. "Well." He sighed. "I'll try. Here——"

He buttoned up his jacket and addressed himself to the habitable globe, with as good an assumption of confidence as lay in his power. "Jest stop rotating, will you," said Mr. Fotheringay.

Incontinently he was flying head over heels through the air at the rate of dozens of miles a minute. In spite of the innumerable circles he was describing per second, he thought; for thought is wonderful—sometimes as sluggish as flowing pitch, sometimes as instantaneous as light. He thought ~~in~~ a second, and willed. "Let me come down safe and sound. Whatever else happens, let me down safe and sound."

He willed it only just in time, for his clothes, heated by his rapid flight through the air, were already beginning to singe. He came down with a forcible, but by no means injurious bump in what appeared to be a mound of fresh-turned earth. A large mass of metal and masonry, extraordinarily like the clock-tower in the middle of the market-square, hit the earth near him, ricocheted over him, and flew into stonework, bricks, and masonry, like a bursting bomb. A hurtling cow hit one of the large blocks and smashed like an egg. There was a crash that made all the most violent crashes of his past life seem like the sound of falling dust, and this was followed by a descending series of lesser crashes. A vast wind roared throughout earth and heaven, so that he could scarcely lift his head to look. For a while he was too breathless and astonished even to see where he was or what had happened. And his first movement was to feel his head and reassure himself that his streaming hair was still his own.

"Lord!" gasped Mr. Fotheringay, scarce able to speak for the gale, "I've had a squeak! What's gone wrong? Storms and thunder. And only a minute ago a fine night. It's Mayday set me on to this sort of thing. *What a wind!* If I go on fooling in this way I'm bound to have a thundering accident! . . .

"Where's Mayday?"

"What a confounded mess everything's in!"

He looked about him so far as his flapping jacket would permit. The appearance of things was really extremely strange. "The sky's all right anyhow," said Mr. Fotheringay. "And that's about all that is all right. And even there it looks like a terrific gale coming up. But there's the moon overhead. Just as it was just now. Bright as midday. But as for the rest—— Where's the village? Where's—where's anything? And what on earth set this wind ~~a~~-blowing? I didn't order no wind."

Mr. Fotheringay struggled to get to his feet in vain, and after one failure, remained on all-fours, holding on. He surveyed the moonlit world to leeward, with the tails of his jacket

streaming over his head. "There's something seriously wrong," said Mr. Fotheringay. "And what it is—goodness knows."

Far and wide nothing was visible in the white glare through the haze of dust that drove before a screaming gale but tumbled masses of earth and heaps of inchoate ruins, no trees, no houses, no familiar shapes, only a wilderness of disorder vanishing at last into the darkness beneath the whirling columns and streamers, the lightnings and thunderings of a swiftly rising storm. Near him in the livid glare was something that might once have been an elm-tree, a smashed mass of splinters, shivered from boughs to base, and further a twisted mass of iron girders—only too evidently the viaduct—rose out of the piled confusion.

You see, when Mr. Fotheringay had arrested the rotation of the solid globe, he had made no stipulation concerning the trifling movables upon its surface. And the earth spins so fast that the surface at its equator is travelling at rather more than a thousand miles an hour, and in these latitudes at more than half that pace. So that the village, and Mr. Maydig, and Mr. Fotheringay, and everybody and everything had been jerked violently forward at about nine miles per second—that is to say, much more violently than if they had been fired out of a cannon. And every human being, every living creature, every house, and every tree—all the world as we know it—had been so jerked and smashed and utterly destroyed. That was all.

These things Mr. Fotheringay did not, of course, fully appreciate. But he perceived that his miracle had miscarried, and with that a great disgust of miracles came upon him. He was in darkness now, for the clouds had swept together and blotted out his momentary glimpse of the moon, and the air was full of fitful struggling tortured wraiths of hail. A great roaring of wind and waters filled earth and sky, and, peering under his hand through the dust and sleet to windward, he saw by the play of the lightnings a vast wall of water pouring towards him.

"Maydig!" screamed Mr. Fotheringay's feeble voice amid the elemental uproar. "Here!—Maydig!"

"Stop!" cried Mr. Fotheringay to the advancing water. "Oh, for goodness' sake, stop!"

"Just a moment," said Mr. Fotheringay to the lightnings and thunder. "Stop just a moment while I collect my thoughts. . . . And now what shall I do?" he said. "What shall I do? Lord! I wish Maydig was about."

"I know," said Mr. Fotheringay. "And for goodness' sake let's have it right *this* time."

He remained on all-fours, leaning against the wind, very intent to have everything right.

"Ah!" he said. "Let nothing what I'm going to order

happen until I say 'Off!' . . . Lord! I wish I'd thought of that before!"

He lifted his little voice against the whirlwind, shouting louder and louder in the vain desire to hear himself speak. "Now then!—here goes! Mind about that what I said just now. In the first place, when all I've got to say is done, let me lose my miraculous power, let my will become just like anybody else's will, and all these dangerous miracles be stopped. I don't like them. I'd rather I didn't work 'em. Ever so much. That's the first thing. And the second is—let me be back just before the miracles begin; let everything be just as it was before that blessed lamp turned up. It's a big job, but it's the last. Have you got it? No more miracles, everything as it was—me back in the Long Dragon just before I drank my half-pint. That's it! Yes."

He dug his fingers into the mould, closed his eyes, and said "Off!"

Everything became perfectly still. He perceived that he was standing erect.

"So *you* say," said a voice.

He opened his eyes. He was in the bar of the Long Dragon, arguing about miracles with Toddy Beamish. He had a vague sense of some great thing forgotten that instantaneously passed. You see, except for the loss of his miraculous powers, everything was back as it had been; his mind and memory therefore were now just as they had been at the time when this story began. So that he knew absolutely nothing of all that is told here, knows nothing of all that is told here to this day. And among other things, of course, he still did not believe in miracles.

"I tell you that miracles, properly speaking, can't possibly happen," he said, "whatever you like to hold. And I'm prepared to prove it up to the hilt."

"That's what *you* think," said Toddy Beamish, and "Prove it if you can."

"Looky here, Mr. Beamish," said Mr. Fotheringay. "Let us clearly understand what a miracle is. It's something contrariwise to the course of Nature done by power of Will. . . ."

STORY THIRTY-EIGHT

FILMER

IN truth the mastery of flying was the work of thousands of men—this man a suggestion and that an experiment, until at last only one vigorous intellectual effort was needed to finish the work. But the inexorable injustice of the popular mind has decided that of all these thousands, one man, and that a man who never flew, should be chosen as the discoverer, just as it has chosen to honour Watt as the discoverer of steam and Stephenson of the steam-engine. And surely of all honoured names none is so grotesquely and tragically honoured as poor Filmer's, the timid, intellectual creature who solved the problem over which the world had hung perplexed and a little fearful for so many generations, the man who pressed the button that has changed peace and warfare and wellnigh every condition of human life and happiness. Never has that recurring wonder of the littleness of the scientific man in the face of the greatness of his science found such an amazing exemplification. Much concerning Filmer is, and must remain, profoundly obscure—Filmers attract no Boswells—but the essential facts and the concluding scene are clear enough, and there are letters, and notes, and casual allusions to piece the whole together. And this is the story one makes, putting this thing with that, of Filmer's life and death.

The first authentic trace of Filmer on the page of history is a document in which he applies for admission as a paid student in physics to the Government laboratories at South Kensington, and therein he describes himself as the son of a "military bootmaker" ("cobbler" in the vulgar tongue) of Dover, and lists his various examination proofs of a high proficiency in chemistry and mathematics. With a certain want of dignity he seeks to enhance these attainments by a profession of poverty and disadvantages, and he writes of the laboratory as the "gaol" of his ambitions, a slip which reinforces his claim to have devoted himself exclusively to the exact sciences. The document is endorsed in a manner that shows Filmer was admitted to this coveted opportunity; but until quite recently no traces of his success in the Government institution could be found.

It has now, however, been shown that in spite of his professional zeal for research, Filmer, before he had held this scholarship a year, was tempted by the possibility of a small increase in his immediate income, to abandon it in order to become one of the nine-pence-an-hour computers employed by a well-known Professor in his vicarious conduct of those extensive researches of his in solar physics—researches which are still a matter of perplexity to astronomers. Afterwards,

for the space of seven years, save for the pass lists of the London University, in which he is seen to climb slowly to a double first-class B.Sc. in mathematics and chemistry, there is no evidence of how Filmer passed his life. No one knows how or where he lived, though it seems highly probable that he continued to support himself by teaching while he prosecuted the studies necessary for this distinction. And then, oddly enough, one finds him mentioned in the correspondence of Arthur Hicks, the poet.

"You remember Filmer," Hicks writes to his friend Vance; "well, *he* hasn't altered a bit, the same hostile mumble and the nasty chin—how *can* a man contrive to be always three days from shaving?—and a sort of furtive air of being engaged in sneaking in front of one; even his coat and that frayed collar of his show no further signs of the passing of years. He was writing in the library and I sat down beside him in the name of God's charity, whereupon he deliberately insulted me by covering up his memoranda. It seems *he* has some brilliant research on hand that he suspects me of all people—with a Bodley Booklet a-printing!—of stealing. He has taken remarkable honours at the University—he went through them with a sort of hasty slobber, as though he feared I might interrupt him before he had told me all—and he spoke of taking his D.Sc. as one might speak of taking a cab. And he asked what I was doing—with a sort of comparative accent, and his arm was spread nervously, positively a protecting arm, over the paper that hid the precious idea—his one hopeful idea.

"'Poetry,' he said, 'poetry. And what do you profess to teach in it, Hicks?'

"The thing's a provincial professorling in the very act of budding, and I thank the Lord devoutly that but for the precious gift of indolence I also might have gone this way to D.Sc. and destruction. . . ."

A curious little vignette that I am inclined to think caught Filmer in or near the very birth of his discovery.

Hicks was wrong in anticipating a provincial professorship for Filmer. Our next glimpse of him is lecturing on "rubber and rubber substitutes," to the Society of Arts—he had become manager to a great plastic-substance manufactory—and at that time, it is now known, he was a member of the Aeronautical Society, albeit *he* contributed nothing to the discussions of that body, preferring no doubt to mature his great conception without external assistance. And within two years of that paper before the Society of Arts he was hastily taking out a number of patents and proclaiming in various undignified ways the completion of the divergent inquiries which made his flying machine possible. The first definite statement to that effect appeared in a halfpenny evening paper through the agency of a man who lodged in the

same house with Filmer. His final haste after his long laborious secret patience seems to have been due to a needless panic, Footle, the notorious American scientific quack, having made an announcement that Filmer interpreted wrongly as an anticipation of his idea.

Now what precisely was Filmer's idea? Really a very simple one. Before his time the pursuit of aeronautics had taken two divergent lines, and had developed on the one hand balloons—large apparatus lighter than air, easy in ascent, and comparatively safe in descent, but floating helplessly before any breeze that took them; and on the other, flying machines that flew only in theory—vast flat structures heavier than air, propelled and kept up by heavy engines and for the most part smashing at the first descent. But, neglecting the fact that the inevitable final collapse rendered them impossible, the weight of the flying machines gave them this theoretical advantage, that they could go through the air against a wind, a necessary condition if aerial navigation was to have any practical value. It is Filmer's particular merit that he perceived the way in which the contrasted and hitherto incompatible merits of balloon and heavy flying machine might be combined in one apparatus, which should be at choice either heavier or lighter than air. He took hints from the contractile bladders of fish and the pneumatic cavities of birds. He devised an arrangement of contractile and absolutely closed balloons which when expanded could lift the actual flying apparatus with ease, and when retracted by the complicated "musculature" he wove about them, were withdrawn almost completely into the frame; and he built the large framework which these balloons sustained, of hollow, rigid tubes, the air in which, by an ingenious contrivance, was automatically pumped out as the apparatus fell, and which then remained exhausted so long as the aeronaut desired. There were no wings or propellers to his machine, such as there had been to all previous aeroplanes, and the only engine required was the compact and powerful little appliance needed to contract the balloons. He perceived that such an apparatus as he had devised might rise with frame exhausted and balloons expanded to a considerable height, might then contract its balloons and let the air into its frame, and by an adjustment of its weights slide down the air in any desired direction. As it fell it would accumulate velocity and at the same time lose weight, and the momentum accumulated by its downrush could be utilised by means of a shifting of its weights to drive it up in the air again as the balloons expanded. This conception, which is still the structural conception of all successful flying machines, needed, however, a vast amount of toil upon its details before it could actually be realised, and such toil Filmer—as he was accustomed to tell the numerous interviewers who crowded upon him in the heyday of his fame—"ungrudgingly and un-

sparingly gave." His particular difficulty was the elastic lining of the contractile balloon. He found he needed a new substance, and in the discovery and manufacture of that new substance he had, as he never failed to impress upon the interviewers, "performed a far more arduous work than even in the actual achievement of my seemingly greater discovery."

But it must not be imagined that these interviews followed hard upon Filmer's proclamation of his invention. An interval of nearly five years elapsed during which he timidly remained at his rubber factory—he seems to have been entirely dependent on his small income from this source—making misdirected attempts to assure a quite indifferent public that he really *had* invented what he had invented. He occupied the greater part of his leisure in the composition of letters to the scientific and daily press, and so forth, stating precisely the net result of his contrivances, and demanding financial aid. That alone would have sufficed for the suppression of his letters. He spent such holidays as he could arrange in unsatisfactory interviews with the doorkeepers of leading London papers—he was singularly not adapted for inspiring hall-porters with confidence—and he positively attempted to induce the War Office to take up his work with him. There remains a confidential letter from Major-General Volleyfire to the Earl of Frogs. "The man's a crank and a boulder to boot," says the Major-General in his bluff, sensible, army way, and so left it open for the Japanese to secure, as they subsequently did, the priority in this side of warfare—a priority they still to our great discomfort retain.

And then by a stroke of luck the membrane Filmer had invented for his contractile balloon was discovered to be useful for the valves of a new oil-engine, and he obtained the means for making a trial model of his invention. He threw up his rubber factory appointment, desisted from all further writing, and, with a certain secrecy that seems to have been an inseparable characteristic of all his proceedings, set to work upon the apparatus. He seems to have directed the making of its parts and collected most of it in a room in Shoreditch, but its final putting together was done at Dymchurch, in Kent. He did not make the affair large enough to carry a man, but he made an extremely ingenious use of what were then called the Marconi rays to control its flight. The first flight of this first practicable flying machine took place over some fields near Burford Bridge, near Hythe, in Kent, and Filmer followed and controlled its flight upon a specially constructed motor tricycle.

The flight was, considering all things, an amazing success. The apparatus was brought in a cart from Dymchurch to Burford Bridge, ascended there to a height of nearly three hundred feet, swooped thence very nearly back to Dymchurch, came about in its sweep, rose again, circled, and finally sank

uninjured in a field behind the Burford Bridge Inn. At its descent a curious thing happened. Filmer got off his tricycle, scrambled over the intervening dyke, advanced perhaps twenty yards towards his triumph, threw out his arms in a strange gesticulation, and fell down in a dead faint. Every one could then recall the ghastliness of his features and all the evidences of extreme excitement they had observed throughout the trial, things they might otherwise have forgotten. Afterwards in the inn he had an unaccountable gust of hysterical weeping.

Altogether there were not twenty witnesses of this affair, and those for the most part uneducated men. The New Romney doctor saw the ascent but not the descent, his horse being frightened by the electrical apparatus on Filmer's tricycle and giving him a nasty spill. Two members of the Kent constabulary watched the affair from a cart in an unofficial spirit, and a grocer calling round the Marsh for orders and two lady cyclists seem almost to complete the list of educated people. There were two reporters present, one representing a Folkestone paper and the other being a fourth-class interviewer and "symposium" journalist, whose expenses down, Filmer, anxious as ever for adequate advertisement—and now quite realising the way in which adequate advertisement may be obtained—had paid. The latter was one of those writers who can throw a convincing air of unreality over the most credible events, and his half-facetious account of the affair appeared in the magazine page of a popular journal. But, happily for Filmer, this person's colloquial methods were more convincing. He went to offer some further screed upon the subject to Banghurst, the proprietor of the *New Paper*, and one of the ablest and most unscrupulous men in London journalism, and Banghurst instantly seized upon the situation. The interviewer vanishes from the narrative, no doubt very doubtfully remunerated, and Banghurst, Banghurst himself, double chin, grey twill suit, abdomen, voice, gestures and all, appears at Dymchurch, following his large, unrivalled journalistic nose. He had seen the whole thing at a glance, just what it was and what it might be.

At his touch, as it were, Filmer's long-pent investigations exploded into fame. He instantly and most magnificently was a Boom. One turns over the files of the journals of the year 1907 with a quite incredulous recognition of how swift and flaming the boom of those days could be. The July papers know nothing of flying, see nothing in flying, state by a most effective silence that men never would, could, or should fly. In August flying and Filmer and flying and parachutes and aerial tactics and the Japanese Government and Filmer and again flying, shouldered the war in Yunnan and the gold mines of Upper Greenland off the leading page. And Banghurst had given ten thousand pounds, and, further, Banghurst was

giving five thousand pounds, and Banghurst had devoted his well-known, magnificent (but hitherto sterile) private laboratories and several acres of land near his private residence on the Surrey hills to the strenuous and violent completion—Banghurst fashion—of the life-size practicable flying machine. Meanwhile, in the sight of privileged multitudes in the walled-garden of the Banghurst town residence in Fulham, Filmer was exhibited at weekly garden parties putting the working model through its paces. At enormous initial cost, but with a final profit, the *New Paper* presented its readers with a beautiful photographic souvenir of the first of these occasions.

Here again the correspondence of Arthur Hicks and his friend Vance comes to our aid.

"I saw Filmer in his glory," he writes, with just the touch of envy natural to his position as a poet *passé*. "The man is brushed and shaved, dressed in the fashion of a Royal-Institution-Afternoon Lecturer, the very newest shape in frock-coats and long patent shoes, and altogether in a state of extraordinary streakiness between an owlish great man and a scared abashed self-conscious bounder cruelly exposed. He hasn't a touch of colour in the skin of his face, his head juts forward, and those queer little dark amber eyes of his watch furtively round him for his fame. His clothes fit perfectly and yet sit upon him as though he had bought them ready-made. He speaks in a mumble still, but he says, you perceive indistinctly, enormous self-assertive things, he backs into the rear of groups by instinct if Banghurst drops the line for a minute, and when he walks across Banghurst's lawn one perceives him a little out of breath and going jerky, and that his weak white hands are clenched. His is a state of tension—horrible tension. And he is the Greatest Discoverer of This or Any Age—the Greatest Discoverer of This or Any Age! What strikes one so forcibly about him is that he didn't somehow quite expect it ever, at any rate, not at all like this. Banghurst is about everywhere, the energetic M.C. of his great little catch, and I swear he will have every one down on his lawn there before he has finished with the engine; he had bagged the prime minister yesterday, and, he, bless his heart! didn't look particularly outside, on the very first occasion. Conceive it! Filmer! Our obscure unwashed Filmer, the Glory of British science! Duchesses crowd upon him, beautiful, bold peeresses say in their beautiful, clear loud voices—have you noticed how penetrating the great lady is becoming nowadays?—'Oh, Mr. Filmer, how *did* you do it?'"

"Common men on the edge of things are too remote for the answer. One imagines something in the way of that interview, 'toil ungrudgingly and unsparingly given, Madam, and, perhaps—I don't know—but perhaps a little special aptitude.'"

So far Hicks, and the photographic supplement to the *New Paper* is in sufficient harmony with the description. In one

picture the machine swings down towards the river, and the tower of Fulham church appears below it through a gap in the elms, and in another, Filmer sits at his guiding batteries, and the great and beautiful of the earth stand around him, with Banghurst massed modestly but resolutely in the rear. The grouping is oddly apposite. Occluding much of Banghurst, and looking with a pensive, speculative expression at Filmer, stands the Lady Mary Elkinghorn, still beautiful, in spite of the breath of scandal and her eight-and-thirty years, the only person whose face does not admit a perception of the camera that was in the act of snapping them all.

So much for the exterior facts of the story, but, after all, they are very exterior facts. About the real interest of the business one is necessarily very much in the dark. How was Filmer feeling at the time? How much was a certain unpleasant anticipation present inside that very new and fashionable frock-coat? He was in the halfpenny, penny, sixpenny, and more expensive papers alike, and acknowledged by the whole world as "the Greatest Discoverer of This or Any Age." He had invented a practicable flying machine, and every day down among the Surrey hills the life-sized model was getting ready. And when it was ready, it followed as a clear inevitable consequence of his having invented and made it—everybody in the world, indeed, seemed to take it for granted; there wasn't a gap anywhere in that serried front of anticipation—that he would proudly and cheerfully get aboard it, ascend with it, and fly.

But we know now pretty clearly that simple pride and cheerfulness in such an act were singularly out of harmony with Filmer's private constitution. It occurred to no one at the time, but there the fact is. We can guess with some confidence now that it must have been drifting about in his mind a great deal during the day, and, from a little note to his physician complaining of persistent insomnia, we have the soundest reason for supposing it dominated his nights—the idea that it would be after all, in spite of his theoretical security, an abominably sickening, uncomfortable, and dangerous thing for him to flap about in nothingness a thousand feet or so in the air. It must have dawned upon him quite early in the period of being the Greatest Discoverer of This or Any Age, the vision of doing this and that with an extensive void below. Perhaps somewhen in his youth he had looked down a great height or fallen down in some excessively uncomfortable way; perhaps some habit of sleeping on the wrong side had resulted in that disagreeable falling nightmare one knows, and given him his horror; of the strength of that horror there remains now not a particle of doubt.

Apparently he had never weighed this duty of flying in his earlier days of research; the machine had been his end, but now things were opening out beyond his end, and particularly

this giddy whirl up above there. He was a Discoverer and he had Discovered. But he was not a Flying Man, and it was only now that he was beginning to perceive clearly that he was expected to fly. Yet, however much the thing was present in his mind he gave no expression to it until the very end, and meanwhile he went to and fro from Banghurst's magnificent laboratories, and was interviewed and lionised, and wore good clothes, and ate good food, and lived in an elegant flat, enjoying a very abundant feast of such good, coarse, wholesome Fame and Success as a man, starved for all his years as he had been starved, might be reasonably expected to enjoy.

After a time, the weekly gatherings in Fulham ceased. The model had failed one day just for a moment to respond to Filmer's guidance, or he had been distracted by the compliments of an archbishop. At any rate, it suddenly dug its nose into the air just a little too steeply as the archbishop was sailing through a Latin quotation for all the world like an archbishop in a book, and it came down in the Fulham Road within three yards of a 'bus horse. It stood for a second perhaps, astonishing and in its attitude astonished, then it crumpled, shivered into pieces, and the 'bus horse was incidentally killed.

Filmer lost the end of the archiepiscopal compliment. He stood up and stared as his invention swooped out of sight and reach of him. His long, white hands still gripped his useless apparatus. The archbishop followed his skyward stare with an apprehension unbecoming in an archbishop.

Then came the crash and the shouts and uproar from the road to relieve Filmer's tension. "My God!" he whispered, and sat down.

Every one else almost was staring to see where the machine had vanished, or rushing into the house.

The making of the big machine progressed all the more rapidly for this. Over its making presided Filmer, always a little slow and very careful in his manner, always with a growing preoccupation in his mind. His care over the strength and soundness of the apparatus was prodigious. The slightest doubt, and he delayed everything until the doubtful part could be replaced. Wilkinson, his senior assistant, fumed at some of these delays, which, he insisted, were for the most part unnecessary. Banghurst magnified the patient certitude of Filmer in the *New Paper*, and reviled it bitterly to his wife, and MacAndrew, the second assistant, approved Filmer's wisdom. "We're not wanting a *fiasco*, man," said MacAndrew. "He's perfectly well advised."

And whenever an opportunity arose Filmer would expound to Wilkinson and MacAndrew just exactly how every part of the flying machine was to be controlled and worked, so that in effect they would be just as capable, and even more capable, when at last the time came, of guiding it through the skies.

Now I should imagine that if Filmer had seen fit at this stage to define just what he was feeling, and to take a definite line in the matter of his ascent, he might have escaped that painful ordeal quite easily. If he had had it clearly in his mind he could have done endless things. He would surely have found no difficulty with a specialist to demonstrate a weak heart, or something gastric or pulmonary, to stand in his way—that is the line I am astonished he did not take—or he might, had he been man enough, have declared simply and finally that he did not intend to do the thing. But the fact is, though the dread was hugely present in his mind, the thing was by no means sharp and clear. I fancy that all through this period he kept telling himself that when the occasion came he would find himself equal to it. He was like a man just gripped by a great illness, who says he feels a little out of sorts, and expects to be better presently. Meanwhile he delayed the completion of the machine, and let the assumption that he was going to fly it take root and flourish exceedingly about him. He even accepted anticipatory compliments on his courage. And, barring this secret squeamishness, there can be no doubt he found all the praise and distinction and fuss he got a delightful and even intoxicating draught.

The Lady Mary Elkinghorn made things a little more complicated for him.

How *that* began was a subject of inexhaustible speculation to Hicks. Probably in the beginning she was just a little "nice" to him with that impartial partiality of hers, and it may be that to her eyes, standing out conspicuously as he did ruling his monster in the upper air, he had a distinction that Hicks was not disposed to find. And somehow they must have had a moment of sufficient isolation, and the great Discoverer a moment of sufficient courage for something just a little personal to be mumbled or blurted. However it began, there is no doubt that it did begin, and presently became quite perceptible to a world accustomed to find in the proceedings of the Lady Mary Elkinghorn a matter of entertainment. It complicated things, because the state of love in such a virgin mind as Filmer's would brace his resolution, if not sufficiently, at any rate considerably, towards facing a danger he feared, and hampered him in such attempts at evasion as would otherwise be natural and congenial.

It remains a matter for speculation just how the Lady Mary felt for Filmer and just what she thought of him. At thirty-eight one may have gathered much wisdom and still be not altogether wise, and the imagination still functions actively enough in creating glammers and effecting the impossible. He came before her eyes as a very central man, and that always counts, and he had powers, unique powers as it seemed, at any rate in the air. The performance with the model had just a touch of the quality of a potent incantation, and women have

ever displayed an unreasonable disposition to imagine that when a man has powers he must necessarily have Power. Given so much, and what was not good in Filmer's manner and appearance became an added merit. He was modest, he hated display, but given an occasion where *true* qualities are needed, then—then one would see!

The late Mrs. Bampton thought it wise to convey to Lady Mary her opinion that Filmer, all things considered, was rather a "grub." "He's certainly not a sort of man I have ever met before," said the Lady Mary, with a quite unruffled serenity. And Mrs. Bampton, after a swift, imperceptible glance at that serenity, decided that so far as saying anything to Lady Mary went, she had done as much as could be expected of her. But she said a great deal to other people.

And at last, without any undue haste or unseemliness, the day dawned, the great day, when Banghurst had promised his public—the world in fact—that flying should be finally attained and overcome. Filmer saw it dawn, watched even in the darkness before it dawned, watched its stars fade and the grey and pearly pinks give place at last to the clear blue sky of a sunny, cloudless day. He watched it from the window of his bedroom in the new-built wing of Banghurst's Tudor house. And as the stars were overwhelmed and the shapes and substances of things grew into being out of the amorphous dark, he must have seen more and more distinctly the festive preparations beyond the beech clumps near the green pavilion in the outer park, the three stands for the privileged spectators, the raw, new fencing of the enclosure, the sheds and workshops, the Venetian masts and fluttering flags that Banghurst had considered essential, black and lump in the breezeless dawn, and amidst all these things a great shape covered with tarpauling. A strange and terrible portent for humanity was that shape, a beginning that must surely spread and widen and change and dominate all the affairs of men, but to Filmer it is very doubtful whether it appeared in anything but a narrow and personal light. Several people heard him pacing in the small hours—for the vast place was packed with guests by a proprietor editor who, before all things, understood compression. And about five o'clock, if not before, Filmer left his room and wandered out of the sleeping house into the park, alive by that time with sunlight and birds and squirrels and the fallow deer. MacAndrew, who was also an early riser, met him near the machine, and they went and had a look at it together.

It is doubtful if Filmer took any breakfast, in spite of the urgency of Banghurst. So soon as the guests began to be about in some number he seems to have retreated to his room. Thence about ten he went into the shrubbery, very probably because he had seen the Lady Mary Elkinghorn there. She was walking up and down, engaged in conversation with her

old school friend, Mrs. Brewis-Craven, and although Filmer had never met the latter lady before, he joined them and walked beside them for some time. There were several silences in spite of the Lady Mary's brilliance. The situation was a difficult one, and Mrs. Brewis-Craven did not master its difficulty. "He struck me," she said afterwards with a luminous self-contradiction, "as a very unhappy person who had something to say, and wanted before all things to be helped to say it. But how was one to help him when one didn't know what it was?"

At half-past eleven the enclosures for the public in the outer park were crammed, there was an intermittent stream of equipages along the belt which circles the outer park, and the house party was dotted over the lawn and shrubbery and the corner of the inner park, in a series of brilliantly attired knots, all making for the flying machine. Filmer walked in a group of three with Banghurst, who was supremely and conspicuously happy, and Sir Theodore Hickie, the president of the Aeronautical Society. Mrs. Banghurst was close behind with the Lady Mary Elkinghorn, Georgina Hickie, and the Dean of Stays. Banghurst was large and copious in speech, and such interstices as he left were filled in by Hickie with complimentary remarks to Filmer. And Filmer walked between them saying not a word except by way of unavoidable reply. Behind, Mrs. Banghurst listened to the admirably suitable and shapely conversation of the Dean with that fluttered attention to the ampler clergy ten years of social ascent and ascendancy had not cured in her; and the Lady Mary watched, no doubt with an entire confidence in the world's disillusionment, the drooping shoulders of the sort of man she had never met before.

There was some cheering as the central party came into view of the enclosures, but it was not very unanimous nor invigorating cheering. They were within fifty yards of the apparatus when Filmer took a hasty glance over his shoulder to measure the distance of the ladies behind them, and decided to make the first remark he had initiated since the house had been left. His voice was just a little hoarse, and he cut in on Banghurst in mid-sentence on Progress.

"I say, Banghurst," he said, and stopped.

"Yes," said Banghurst.

"I wish——" He moistened his lips. "I'm not feeling well." Banghurst stopped dead. "Eh?" he shouted.

"A queer feeling." Filmer made to move on, but Banghurst was immovable. "I don't know. I may be better in a minute. If not—perhaps. . . . MacAndrew——"

"You're not feeling *well*?" said Banghurst, and stared at his white face.

"My dear!" he said, as Mrs. Banghurst came up with them, "Filmer says he isn't feeling *well*."

"A little queer," exclaimed Filmer, avoiding the Lady Mary's eyes. "It may pass off——"

There was a pause.

It came to Filmer that he was the most isolated person in the world.

"In any case," said Banghurst. "the ascent must be made. Perhaps if you were to sit down somewhere for a moment——"

"It's the crowd, I think," said Filmer.

There was a second pause. Banghurst's eye rested in scrutiny on Filmer, and then swept the sample of public in the enclosure.

"It's unfortunate," said Sir Theodore Hickie; "but still—I suppose—— Your assistants—— Of course, if you feel out of condition and disinclined——"

"I don't think Mr. Filmer would permit *that* for a moment," said the Lady Mary.

"But if Mr. Filmer's nerve is run—— It might even be dangerous for him to attempt——" Hickie coughed.

"It's just because it's dangerous," began the Lady Mary, and felt she had made her point of view and Filmer's plain enough.

Conflicting motives struggled for Filmer.

"I feel I ought to go up," he said, regarding the ground. He looked up and met the Lady Mary's eyes. "I want to go up," he said, and smiled whitely at her. He turned towards Banghurst. "If I could just sit down somewhere for a moment out of the crowd and sun——"

Banghurst, at least, was beginning to understand the case. "Come into my little room in the green pavilion," he said. "It's quite cool there." He took Filmer by the arm.

Filmer turned his face to the Lady Mary Elkinghorn again. "I shall be all right in five minutes," he said. "I'm tremendously sorry——"

The Lady Mary Elkinghorn smiled at him. "I couldn't think," he said to Hickie, and obeyed the compulsion of Banghurst's pull.

The rest remained watching the two recede.

"He is so fragile," said the Lady Mary.

"He's certainly a highly nervous type," said the Dean, whose weakness it was to regard the whole world, except married clergymen with enormous families, as "neurotic."

"Of course," said Hickie, "it isn't absolutely necessary for him to go up because he has invented——"

"How *could* he avoid it?" asked the Lady Mary, with the faintest shadow of scorn.

"It's certainly most unfortunate if he's going to be ill now," said Mrs. Banghurst a little severely.

"He's not going to be ill," said the Lady Mary, and certainly she had met Filmer's eye.

"You'll be all right," said Banghurst, as they went towards

the pavilion. "All you want is a nip of brandy. It ought to be you, you know. You'll be—you'd get it rough, you know, if you let another man——"

"Oh, I want to go," said Filmer. "I shall be all right. As a matter of fact I'm almost inclined *now*——. No! I think I'll have that nip of brandy first."

Banghurst took him into the little room and routed out an empty decanter. He departed in search of a supply. He was gone perhaps five minutes.

The history of those five minutes cannot be written. At intervals Filmer's face could be seen by the people on the easternmost of the stands erected for spectators, against the window-pane peering out, and then it would recede and fade. Banghurst vanished shouting behind the grand stand, and presently the butler appeared going pavilionward with a tray.

The apartment in which Filmer came to his last solution was a pleasant little room very simply furnished with green furniture and an old bureau—for Banghurst was simple in all his private ways. It was hung with little engravings after Morland and it had a shelf of books. But as it happened, Banghurst had left a rook rifle he sometimes played with on the top of the desk, and on the corner of the mantelshelf was a tin with three or four cartridges remaining in it. As Filmer went up and down that room wrestling with his intolerable dilemma he went first towards the neat little rifle athwart the blotting-pad and then towards the neat little red label

"22 LONG."

The thing must have jumped into his mind in a moment.

Nobody seems to have connected the report with him, though the gun, being fired in a confined space, must have sounded loud, and there were several people in the billiard-room, separated from him only by a lath-and-plaster partition. But directly Banghurst's butler opened the door and smelt the sour smell of the smoke, he knew, he says, what had happened. For the servants at least of Banghurst's household had guessed something of what was going on in Filmer's mind.

All through that trying afternoon Banghurst behaved as he held a man should behave in the presence of hopeless disaster, and his guests for the most part succeeded in not insisting upon the fact—though to conceal their perception of it altogether was impossible—that Banghurst had been pretty elaborately and completely swindled by the deceased. The public in the enclosure, Hicks told me, dispersed "like a party that has been ducking a welsher," and there wasn't a soul in the train to London, it seems, who hadn't known all along that flying was a quite impossible thing for man. "But he might have tried it," said many, "after carrying the thing so far."

In the evening, when he was comparatively alone, Banghurst broke down and went on like a man of clay. I have been told he wept, which must have made an imposing scene, and he certainly said Filmer had ruined his life, and offered and sold the whole apparatus to MacAndrew for half a crown. "I've been thinking——" said MacAndrew at the conclusion of the bargain, and stopped.

The next morning the name of Filmer was, for the first time, less conspicuous in the *New Paper* than in any other daily paper in the world. The rest of the world's instructors, with varying emphasis, according to their dignity and the degree of competition between themselves and the *New Paper*, proclaimed the "Entire Failure of the New Flying Machine," and "Suicide of the Impostor." But in the district of North Surrey the reception of the news was tempered by a perception of unusual aerial phenomena.

Overnight Wilkinson and MacAndrew had fallen into violent argument on the exact motives of their principal's rash act.

"The man was certainly a poor, cowardly body, but so far as his science went he was *no* impostor," said MacAndrew, "and I'm prepared to give that proposition a very practical demonstration, Mr. Wilkinson, so soon as we've got the place a little more to ourselves. For I've no faith in all this publicity for experimental trials."

And to that end, while all the world was reading of the certain failure of the new flying machine, MacAndrew was soaring and curvetting with great amplitude and dignity over the Epsom and Wimbledon divisions, and Banghurst, restored once more to hope and energy, and regardless of public security and the Board of Trade, was pursuing his gyrations and trying to attract his attention, on a motor-car and in his pyjamas—he had caught sight of the ascent when pulling up the blind of his bedroom window—equipped, among other things, with a film camera that was subsequently discovered to be jammed.

And Filmer was lying on the billiard table in the green pavilion with a sheet about his body.

STORY THIRTY-NINE

THE MAGIC SHOP

I HAD seen the Magic Shop from afar several times ; I had passed it once or twice, a shop window of alluring little objects, magic balls, magic hens, wonderful cones, ventriloquist dolls, the material of the basket trick, packs of cards that *looked* all right, and all that sort of thing, but never had I thought of going in until one day, almost without warning, Gip hauled me by my finger right up to the window, and so conducted himself that there was nothing for it but to take him in. I had not thought the place was there, to tell the truth—a modest-sized frontage in Regent Street, between the picture shop and the place where the chicks run about just out of patent incubators,—but there it was sure enough. I had fancied it was down nearer the Circus, or round the corner in Oxford Street, or even in Holborn ; always over the way and a little inaccessible it had been, with something of the mirage in its position ; but here it was now quite indisputably, and the fat end of Gip's pointing finger made a noise upon the glass.

"If I was rich," said Gip, dabbing a finger at the Disappearing Egg, "I'd buy myself that. And that"—which was The Crying Baby, Very Human—"and that," which was a mystery, and called, so a neat card asserted, "Buy One and Astonish Your Friends."

"Anything," said Gip, "will disappear under one of those cones. I have read about it in a book.

"And there, dad-da, is the Vanishing Halfpenny—only they've put it this way up so's we can't see how it's done."

Gip, dear boy, inherits his mother's breeding, and he did not propose to enter the shop or worry in any way ; only, you know, quite unconsciously he lugged my finger doorward, and he made his interest clear.

"That," he said, and pointed to the Magic Bottle.

"If you had that ?" I said ; at which promising inquiry he looked up with a sudden radiance.

"I could show it to Jessie," he said, thoughtful as ever of others.

"It's less than a hundred days to your birthday, Gibbles," I said, and laid my hand on the door-handle.

Gip made no answer, but his grip tightened on my finger, and so we came into the shop.

It was no common shop this ; it was a magic shop, and all the prancing precedence Gip would have taken in the matter of mere toys was wanting. He left the burthen of the conversation to me.

It was a little, narrow shop, not very well lit, and the door-bell pinged again with a plaintive note as we closed it behind us.

For a moment or so we were alone and could glance about us. There was a tiger in *papier-maché* on the glass case that covered the low counter—a grave, kind-eyed tiger that wagged his head in a methodical manner; there were several crystal spheres, a china hand holding magic cards, a stock of magic fish-bowls in various sizes, and an immodest magic hat that shamelessly displayed its springs. On the floor were magic mirrors: one to draw you out long and thin, one to swell your head and vanish your legs, and one to make you short and fat like a draught; and while we were laughing at these the shopman, as I suppose, came in.

At any rate, there he was behind the counter—a curious, sallow, dark man, with one ear larger than the other and a chin like the toe-cap of a boot.

"What can we have the pleasure?" he said, spreading his long, magic fingers on the glass case; and so with a start we were aware of him.

"I want," I said, "to buy my little boy a few simple tricks."

"Legerdemain?" he asked. "Mechanical? Domestic?"

"Anything amusing?" said I.

"Um!" said the shopman, and scratched his head for a moment as if thinking. Then, quite distinctly, he drew from his head a glass ball. "Something in this way?" he said, and held it out.

The action was unexpected. I had seen the trick done at entertainments endless times before—it's part of the common stock of conjurers—but I had not expected it here. "That's good," I said, with a laugh.

"Isn't it?" said the shopman.

Gip stretched out his disengaged hand to take this object and found merely a blank palm.

"It's in your pocket," said the shopman, and there it was!

"How much will that be?" I asked.

"We make no charge for glass balls," said the shopman, politely. "We get them"—he picked one out of his elbow as he spoke—"free." He produced another from the back of his neck, and laid it beside its predecessor on the counter. Gip regarded his glass ball sagely, then directed a look of inquiry at the two on the counter, and finally brought his round-eyed scrutiny to the shopman, who smiled. "You may have those too," said the shopman, "and if you *don't* mind, one from my mouth— So!"

Gip counselled me mutely for a moment, and then in a profound silence put away the four balls, resumed my reassuring finger, and nerved himself for the next event.

"We get all our smaller tricks in that way," the shopman remarked.

I laughed in the manner of one who subscribes to a jest. "Instead of going to the wholesale shop," I said. "Of course, it's cheaper."

"In a way," the shopman said. "Though we pay in the end. But not so heavily—as people suppose. . . . Our larger tricks, and our daily provisions and all the other things we want, we get out of that hat. . . . And you know, sir, if you'll excuse my saying it, there *isn't* a wholesale shop, not for Genuine Magic goods, sir. I don't know if you noticed our inscription—the Genuine Magic Shop." He drew a business-card from his cheek and handed it to me. "Genuine," he said, with his finger on the word, and added, "There is absolutely no deception, sir."

He seemed to be carrying out the joke pretty thoroughly, I thought.

He turned to Gip with a smile of remarkable affability. "You, you know, are the Right Sort of Boy."

I was surprised at his knowing that, because, in the interests of discipline, we keep it rather a secret even at home; but Gip received it in unflinching silence, keeping a steadfast eye on him.

"It's only the Right Sort of Boy gets through that doorway."

And as if by way of illustration, there came a rattling at the door, and a squeaking little voice could be faintly heard. "Nyar! I *warn* 'a go in there, dad-da, I *WARN* 'a go in there. Ny-a-a-ah!" and then the accents of a down-trodden parent, urging consolations and propitiations. "It's locked, Edward," he said.

"But it isn't," said I.

"It is, sir," said the shopman, "always—for that sort of child," and as he spoke we had a glimpse of the other youngster, a small, white face, pallid from sweet-eating and over-sapid food, and distorted by evil passions, a ruthless little egotist, pawing at the enchanted pane. "It's no good, sir," said the shopman, as I moved, with my natural helpfulness, doorward, and presently the spoilt child was carried off howling.

"How do you manage that?" I said, breathing more freely.

"Magic!" said the shopman, with a careless wave of the hand, and behold! sparks of coloured fire flew out of his fingers and vanished into the shadows of the shop.

"You were saying," he said, addressing himself to Gip, "before you came in, that you would like one of our 'Buy One and Astonish Your Friends' boxes?"

Gip, after a gallant effort, said "Yes."

"It's in your pocket."

And leaning over the counter—he really had an extraordinarily long body—this amazing person produced the article in the customary conjurer's manner. "Paper," he said, and took a sheet out of the empty hat with the springs; "string," and behold his mouth was a string-box, from which he drew an unending thread, which when he had tied his parcel he bit off—and, it seemed to me, swallowed the ball of string. And then he lit a candle at the nose of one of the ventriloquist's dummies,

stuck one of his fingers (which had become sealing-wax red) into the flame, and so sealed the parcel. "Then there was the Disappearing Egg," he remarked, and produced one from within my coat-breast and packed it, and also The Crying Baby, Very Human. I handed each parcel to Gip as it was ready, and he clasped them to his chest.

He said very little, but his eyes were eloquent; the clutch of his arms was eloquent. He was the playground of unspeakable emotions. These, you know, were *real* Magics.

Then, with a start, I discovered something moving about in my hat—something soft and jumpy. I whipped it off, and a ruffled pigeon—no doubt a confederate—dropped out and ran on the counter, and went, I fancy, into a cardboard box behind the *papier-maché* tiger.

"Tut, tut!" said the shopman, dexterously relieving me of my headress; "careless bird, and—as I live—nesting!"

He shook my hat, and shook out into his extended hand two or three eggs, a large marble, a watch, about half a dozen of the inevitable glass balls, and then crumpled, crinkled paper, more and more and more, talking all the time of the way in which people neglect to brush their hats *inside* as well as out, politely, of course, but with a certain personal application. "All sorts of things accumulate, sir. . . . Not *you*, of course, in particular. . . . Nearly every customer. . . . Astonishing what they carry about with them. . . ." The crumpled paper rose and billowed on the counter more and more and more, until he was nearly hidden from us, until he was altogether hidden, and still his voice went on and on. "We none of us know what the fair semblance of a human being may conceal, Sir. Are we all then no better than brushed exteriors, whitened sepulchres—"

His voice stopped—exactly like when you hit a neighbour's gramophone with a well-aimed brick, the same instant silence, and the rustle of the paper stopped, and everything was still. . . .

"Have you done with my hat?" I said, after an interval.

There was no answer.

I stared at Gip, and Gip stared at me; and there were our distortions in the magic mirrors, looking very rum, and grave, and quiet. . . .

"I think we'll go now," I said. "Will you tell me how much all this comes to?" . . .

"I say," I said, on a rather louder note, "I want the bill; and my hat, please."

It might have been a sniff from behind the paper pile. . . .

"Let's look behind the counter, Gip," I said. "He's making fun of us."

I led Gip round the head-wagging tiger, and what do you think there was behind the counter? No one at all? Only my hat on the floor, and a common conjurer's lop-eared white

rabbit lost in meditation, and looking as stupid and crumpled as only a conjurer's rabbit can do. I resumed my hat, and the rabbit lolloped a lollop or so out of my way.

"Dadda!" said Gip, in a guilty whisper.

"What is it, Gip?" said I.

"I *do* like this shop, dadda."

"So should I," I said to myself, "if the counter wouldn't suddenly extend itself to shut one off from the door." But I didn't call Gip's attention to that. "Pussy!" he said, with a hand out to the rabbit as it came lolloping past us; "Pussy, do Gip a magic!" and his eyes followed it as it squeezed through a door I had certainly not remarked a moment before. Then this door opened wider, and the man with one ear larger than the other appeared again. He was smiling still, but his eye met mine with something between amusement and defiance. "You'd like to see our show-room, sir," he said, with an innocent suavity. Gip tugged my finger forward. I glanced at the counter and met the shopman's eye again. I was beginning to think the magic just a little too genuine. "We haven't *very* much time," I said. But somehow we were inside the show-room before I could finish that.

"All goods of the same quality," said the shopman, rubbing his flexible hands together, "and that is the Best. Nothing in the place that isn't genuine Magic, and warranted thoroughly rum. Excuse me, sir!"

I felt him pull at something that clung to my coat-sleeve, and then I saw he held a little, wriggling red demon by the tail—the little creature bit and fought and tried to get at his hand—and in a moment he tossed it carelessly behind a counter. No doubt the thing was only an image of twisted indiarubber, but for the moment——! And his gesture was exactly that of a man who handles some pretty biting bit of vermin. I glanced at Gip, but Gip was looking at a magic rocking-horse. I was glad he hadn't seen the thing. "I say," I said, in an undertone, and indicating Gip and the red demon with my eyes, "you haven't many things like *that* about, have you?"

"None of ours! Probably brought it with you," said the shopman—also in an undertone, and with a more dazzling smile than ever. "Astonishing what people *will* carry about with them unawares!" And then to Gip, "Do you see anything you fancy here?"

There were many things that Gip fancied there.

He turned to this astonishing tradesman with mingled confidence and respect. "Is that a Magic Sword?" he said.

"A Magic Toy Sword. It neither bends, breaks, nor cuts the fingers. It renders the bearer invincible in battle against any one under eighteen." Half a crown to seven and sixpence, according to size. These panoplies on cards are for juvenile knights-errant and very useful—shield of safety, sandals of swiftness, helmet of invisibility."

"Oh, dadda!" gasped Gip.

I tried to find out what they cost, but the shopman did not heed me. He had got Gip now; he had got him away from my finger; he had embarked upon the exposition of all his confounded stock, and nothing was going to stop him. Presently I saw with a qualm of distrust and something very like jealousy that Gip had hold of this person's finger as usually he has hold of mine. No doubt the fellow was interesting, I thought, and had an interestingly faked lot of stuff, really *good* faked stuff, still——

I wandered after them, saying very little, but keeping an eye on this prestidigital fellow. After all, Gip was enjoying it. And no doubt when the time came to go we should be able to go quite easily.

It was a long, rambling place, that show-room, a gallery broken up by stands and stalls and pillars, with archways leading off to other departments, in which the queerest-looking assistants loafed and stared at one, and with perplexing mirrors and curtains. So perplexing, indeed, were these that I was presently unable to make out the door by which we had come.

The shopman showed Gip magic trains that ran without steam or clockwork just as you set the signals, and then some very, very valuable boxes of soldiers that all came alive directly you took off the lid and said—— I myself haven't a very quick ear and it was a tongue-twisting sound, but Gip—he has his mother's ear—got it in no time. "Bravo!" said the shopman, putting the men back into the box unceremoniously and handing it to Gip. "Now," said the shopman, and in a moment Gip had made them all alive again.

"You'll take that box?" asked the shopman.

"We'll take that box," said I, "unless you charge its full value. In which case it would need a Trust Magnate——"

"Dear heart! No!" and the shopman swept the little men back again, shut the lid, waved the box in the air, and there it was, in brown paper, tied up and—*with Gip's full name and address on the paper!*

The shopman laughed at my amazement.

"This is the genuine magic," he said. "The real thing."

"It's almost too genuine for my taste," I said again.

After that he fell to showing Gip tricks, odd tricks, and still odder the way they were done. He explained them, he turned them inside out, and there was the dear little chap nodding his busy bit of a head in the sagest manner.

I did not attend as well as I might. "Hey, presto!" said the Magic Shopman, and then would come the clear, small "Hey, presto!" of the boy. But I was distracted by other things. It was being borne in upon me just how tremendously rum this place was; it was, so to speak, inundated by a sense of rumness. There was something vaguely rum about the

fixtures even, about the ceiling, about the floor, about the casually distributed chairs. I had a queer feeling that whenever I wasn't looking at them straight they went askew, and moved about, and played a noiseless puss-in-the-corner behind my back. And the cornice had a serpentine design with masks—masks altogether too expressive for proper plaster.

Then abruptly my attention was caught by one of the odd-looking assistants. He was some way off and evidently unaware of my presence—I saw a sort of three-quarter length of him over a pile of toys and through an arch—and, you know, he was leaning against a pillar in an idle sort of way doing the most horrid things with his features! The particular horrid thing he did was with his nose. He did it just as though he was idle and wanted to amuse himself. First of all it was a short, blobby nose, and then suddenly he shot it out like a telescope, and then out it flew and became thinner and thinner until it was like a long, red, flexible whip. Like a thing in a nightmare it was! He flourished it about and flung it forth as a fly-fisher flings his line.

My instant thought was that Gip mustn't see him. I turned about, and there was Gip quite preoccupied with the shopman, and thinking no evil. They were whispering together and looking at me. Gip was standing on a stool, and the shopman was holding a sort of big drum in his hand.

"Hide and seek, dadda!" cried Gip. "You're He!"

And before I could do anything to prevent it, the shopman had clapped the big drum over him.

I saw what was up directly. "Take that off," I cried, "this instant? You'll frighten the boy. Take it off!"

The shopman with the unequal ears did so without a word, and held the big cylinder towards me to show its emptiness. And the stool was vacant! In that instant my boy had utterly disappeared! . . .

You know, perhaps, that sinister something that comes like a hand out of the unseen and grips your heart about. You know it takes your common self away and leaves you tense and deliberate, neither slow nor hasty, neither angry nor afraid. So it was with me.

I came up to this grinning shopman and kicked his stool aside.

"Stop this folly!" I said. "Where is my boy?"

"You see," he said, still displaying the drum's interior, "there is no deception——"

I put out my hand to grip him, and he eluded me by a dexterous movement. I snatched again, and he turned from me and pushed open a door to escape. "Stop!" I said, and he laughed, receding. I leapt after him—into utter darkness.

Thud!

"Lor' bless my 'eart! I didn't see you coming, sir!"

I was in Regent Street, and I had collided with a decent-

looking working man ; and a yard away, perhaps, and looking extremely perplexed with himself, was Gip. There was some sort of apology, and then Gip had turned and come to me with a bright little smile, as though for a moment he had missed me.

And he was carrying four parcels in his arm !

He secured immediate possession of my finger.

For the second I was rather at a loss. I stared round to see the door of the magic shop, and, behold, it was not there ! There was no door, no shop, nothing, only the common pilaster between the shop where they sell pictures and the window with the chicks ! . . .

I did the only thing possible in that mental tumult ; I walked straight to the kerbstone and held up my umbrella for a cab.

"Ansoms," said Gip, in a note of culminating exultation.

I helped him in, recalled my address with an effort, and got in also. Something unusual proclaimed itself in my tail-coat pocket, and I felt and discovered a glass ball. With a petulant expression I flung it into the street.

Gip said nothing.

For a space neither of us spoke.

"Dadda !" said Gip, at last, "that *was* a proper shop !"

I came round with that to the problem of just how the whole thing had seemed to him. He looked completely undamaged—so far, good ; he was neither scared nor unhinged, he was simply tremendously satisfied with the afternoon's entertainment, and there in his arms were the four parcels.

Confound it ! what could be in them ?

"Um !" I said. "Little boys can't go to shops like that every day."

He received this with his usual stoicism, and for a moment I was sorry I was his father and not his mother, and so couldn't suddenly there, *coram publico*, in our hansom, kiss him. After all, I thought, the thing wasn't so very bad.

But it was only when we opened the parcels that I really began to be reassured. Three of them contained boxes of soldiers, quite ordinary lead soldiers, but of so good a quality as to make Gip altogether forget that originally these parcels had been Magic Tricks of the only genuine sort, and the fourth contained a kitten, a little living white kitten, in excellent health and appetite and temper.

I saw this unpacking with a sort of provisional relief. I hung about in the nursery for quite an unconscionable time. . . .

That happened six months ago. And now I am beginning to believe it is all right. The kitten had only the magic natural to all kittens, and the soldiers seem as steady a company as any colonel could desire. And Gip—?

The intelligent parent will understand that I have to go cautiously with Gip.

But I went so far as this one day. I said, "How would you

like your soldiers to come alive, Gip, and march about by themselves ? ”

“ Mine do,” said Gip. “ I just have to say a word I know before I open the lid.”

“ Then they march about alone ? ”

“ Oh, *quite*, dadda. I shouldn’t like them if they didn’t do that.”

I displayed no unbecoming surprise, and since then I have taken occasion to drop in upon him once or twice, unannounced, when the soldiers were about, but so far I have never discovered them performing in anything like a magical manner. . . .

It’s so difficult to tell.

There’s also a question of finance. I have an incurable habit of paying bills. I have been up and down Regent Street several times, looking for that shop. I am inclined to think, indeed, that in that matter honour is satisfied, and that, since Gip’s name and address are known to them, I may very well leave it to these people, whoever they may be, to send in their bill in their own time.

STORY FORTY

THE VALLEY OF SPIDERS

TOWARDS midday the three pursuers came abruptly round a bend in the torrent bed upon the sight of a very broad and spacious valley. The difficult and winding trench of pebbles along which they had tracked the fugitives for so long, expanded to a broad slope, and with a common impulse the three men left the trail, and rode to a low eminence set with olive-dun trees, and there halted, the two others, as became them, a little behind the man with the silver-studded bridle.

For a space they scanned the great expanse below them with eager eyes. It spread remoter and remoter, with only a few clusters of sere thorn bushes here and there, and the dim suggestions of some now waterless ravine to break its desolation of yellow grass. Its purple distances melted at last into the bluish slopes of the farther hills—hills it might be of a greener kind—and above them invisibly supported, and seeming indeed to hang in the blue, were the snow-clad summits of mountains—that grew larger and bolder to the north-westward as the sides of the valley drew together. And westward the valley opened until a distant darkness under the sky told where the forests began. But the three men looked neither east nor west, but only steadfastly across the valley.

The gaunt man with the scarred lip was the first to speak. "Nowhere," he said, with a sigh of disappointment in his voice. "But after all, they had a full day's start."

"They don't know we are after them," said the little man on the white horse.

"She would know," said the leader bitterly, as if speaking to himself.

"Even then they can't go fast. They've got no beast but the mule, and all to-day the girl's foot has been bleeding——"

The man with the silver bridle flashed a quick intensity of rage on him. "Do you think I haven't seen that?" he snarled.

"It helps, anyhow," whispered the little man to himself.

The gaunt man with the scarred lip stared impassively. "They can't be over the valley," he said. "If we ride hard——"

He glanced at the white horse and paused.

"Curse all white horses!" said the man with the silver bridle, and turned to scan the beast his curse included.

The little man looked down between the melancholy ears of his steed.

"I did my best," he said.

The two others stared again across the valley for a space.

The gaunt man passed the back of his hand across the scarred lip.

"Come up!" said the man who owned the silver bridle, suddenly. The little man started and jerked his rein, and the horse hoofs of the three made a multitudinous faint pattering upon the withered grass as they turned back towards the trail. . . .

They rode cautiously down the long slope before them, and so came through a waste of prickly twisted bushes and strange dry shapes of horny branches that grew amongst the rocks, into the level below. And there the trail grew faint, for the soil was scanty, and the only herbage was this scorched dead straw that lay upon the ground. Still, by hard scanning, by leaning beside the horses' necks and pausing ever and again, even these white men could contrive to follow after their prey.

There were trodden places, bent and broken blades of the coarse grass, and ever and again the sufficient intimation of a footmark. And once the leader saw a brown smear of blood where the half-caste girl may have trod. And at that under his breath he cursed her for a fool.

The gaunt man checked his leader's tracking, and the little man on the white horse rode behind, a man lost in a dream. They rode one after another, the man with the silver bridle led the way, and they spoke never a word. After a time it came to the little man on the white horse that the world was very still. He started out of his dream. Besides the minute noises of their horses and equipment, the whole great valley kept the brooding quiet of a painted scene.

Before him went his master and his fellow, each intently leaning forward to the left, each impassively moving with the paces of his horse; their shadows went before them—still, noiseless, tapering attendants; and nearer a crouched cool shape was his own. He looked about him. What was it had gone? Then he remembered the reverberation from the banks of the gorge and the perpetual accompaniment of shifting, jostling pebbles. And, moreover—? There was no breeze. That was it! What a vast, still place it was, a monotonous afternoon slumber. And the sky open and blank, except for a sombre veil of haze that had gathered in the upper valley.

He straightened his back, fretted with his bridle, puckered his lips to whistle, and simply sighed. He turned in his saddle for a time, and stared at the throat of the mountain gorge out of which they had come. Blank! Blank slopes on either side, with never a sign of a decent beast or tree—much less a man. What a land it was! What a wilderness! He dropped again into his former pose.

It filled him with a momentary pleasure to see a wry stick of purple-black flash out into the form of a snake, and vanish amidst the brown. After all, the infernal valley *was* alive. And then, to rejoice him still more, came a breath across his

face, a whisper that came and went, the faintest inclination of a stiff black-antlered bush upon a crest, the first intimations of a possible breeze. Idly he wetted his finger, and held it up.

He pulled up sharply to avoid a collision with the gaunt man, who had stopped at fault upon the trail. Just at that guilty moment he caught his master's eye looking towards him.

For a time he forced an interest in the tracking. Then, as they rode on again, he studied his master's shadow and hat and shoulder appearing and disappearing behind the gaunt man's nearer contours. They had ridden four days out of the very limits of the world into this desolate place, short of water, with nothing but a strip of dried meat under their saddles, over rocks and mountains, where surely none but these fugitives had ever been before—for *that*!

And all this was for a girl, a mere wilful child! And the man had whole cityfuls of people to do his basest bidding—girls, women! Why in the name of passionate folly *this* one in particular? asked the little man, and scowled at the world, and licked his parched lips with a blackened tongue. It was the way of the master, and that was all he knew. Just because she sought to evade him. . . .

His eye caught a whole row of high plumed canes bending in unison, and then the tails of silk that hung before his neck flapped and fell. The breeze was growing stronger. Somehow it took the stiff stillness out of things—and that was well.

"Hullo!" said the gaunt man.

All three stopped abruptly.

"What?" asked the master. "What?"

"Over there," said the gaunt man, pointing up the valley.

"What?"

"Something coming towards us."

And as he spoke a yellow animal crested a rise and came bearing down upon them. It was a big wild dog, coming before the wind, tongue out, at a steady pace, and running with such an intensity of purpose that he did not seem to see the horsemen he approached. He ran with his nose up, following, it was plain, neither scent nor quarry. As he drew nearer the little man felt for his sword. "He's mad," said the gaunt rider.

"Shout!" said the little man and shouted.

The dog came on. Then, when the little man's blade was already out, it swerved aside and went panting by them and past. The eyes of the little man followed its flight. "There was no foam," he said. For a space the man with the silver-studded bridle stared up the valley. "Oh, come on!" he cried at last. "What does it matter?" and jerked his horse into movement again.

The little man left the insoluble mystery of a dog that fled from nothing but the wind, and lapsed into profound musings on human character. "Come on!" he whispered to himself.

"Why should it be given to one man to say 'Come on!' with that stupendous violence of effect. Always, all his life, the man with the silver bridle has been saying that. If I said it——!" thought the little man. But people marvelled when the master was disobeyed even in the wildest things. This half-caste girl seemed to him, seemed to every one, mad—blasphemous almost. The little man, by way of comparison, reflected on the gaunt rider with the scarred lip, as stalwart as his master, as brave and, indeed, perhaps braver, and yet for him there was obedience, nothing but to give obedience duly and stoutly. . . .

Certain sensations of the hands and knees called the little man back to more immediate things. He became aware of something. He rode up beside his gaunt fellow. "Do you notice the horses?" he said in an undertone.

The gaunt face looked interrogation.

"They don't like this wind," said the little man, and dropped behind as the man with the silver bridle turned upon him.

"It's all right," said the gaunt-faced man.

They rode on again for a space in silence. The foremost two rode downcast upon the trail, the hindmost man watched the haze that crept down the vastness of the valley, nearer and nearer, and noted how the wind grew in strength moment by moment. Far away on the left he saw a line of dark bulks—wild hog perhaps, galloping down the valley, but of that he said nothing, nor did he remark again upon the uneasiness of the horses.

And then he saw first one and then a second great white ball, a great shining white ball like a gigantic head of thistledown, that drove before the wind athwart the path. These balls soared high in the air, and dropped and rose again and caught for a moment, and hurried on and passed, but at the sight of them the restlessness of the horses increased.

Then presently he saw that more of these drifting globes—and then soon very many more—were hurrying towards him down the valley.

They became aware of a squealing. Athwart the path a huge boar rushed, turning his head but for one instant to glance at them, and then hurling on down the valley again. And at that, all three stopped and sat in their saddles, staring into the thickening haze that was coming upon them.

"If it were not for this thistledown——" began the leader.

But now a big globe came drifting past within a score of yards of them. It was really not an even sphere at all, but a vast, soft, ragged, filmy thing, a sheet gathered by the corners, an aerial jelly-fish, as it were, but rolling over and over as it advanced, and trailing long, cobwebby threads and streamers that floated in its wake.

"It isn't thistledown," said the little man.

"I don't like the stuff," said the gaunt man.

And they looked at one another.

"Curse it!" cried the leader. "The air's full of it up there. If it keeps on at this pace long, it will stop us altogether."

An instinctive feeling, such as lines out a herd of deer at the approach of some ambiguous thing, prompted them to turn their horses to the wind, ride forward for a few paces, and stare at that advancing multitude of floating masses. They came on before the wind with a sort of smooth swiftness, rising and falling noiselessly, sinking to earth, rebounding high, soaring—all with a perfect unanimity, with a still, deliberate assurance.

Right and left of the horsemen the pioneers of this strange army passed. At one that rolled along the ground, breaking shapelessly and trailing out reluctantly into long grappling ribbons and bands, all three horses began to shy and dance. The master was seized with a sudden, unreasonable impatience. He cursed the drifting globes roundly. "Get on!" he cried; "get on! What do these things matter? How *can* they matter? Back to the trail!" He fell swearing at his horse and sawed the bit across its mouth.

He shouted aloud with rage. "I will follow that trail, I tell you," he cried. "Where is the trail?"

He gripped the bridle of his prancing horse and searched amidst the grass. A long and clinging thread fell across his face, a grey streamer dropped about his bridle arm, some big, active thing with many legs ran down the back of his head. He looked up to discover one of those grey masses anchored as it were above him by these things and flapping out ends as a sail flaps when a boat comes about—but noiselessly.

He had an impression of many eyes, of a dense crew of squat bodies, of long, many-jointed limbs hauling at their mooring ropes to bring the thing down upon him. For a space he stared up, reining in his prancing horse with the instinct born of years of horsemanship. Then the flat of a sword smote his back, and a blade flashed overhead and cut the drifting balloon of spider-web free, and the whole mass lifted softly and drove clear and away.

"Spiders!" cried the voice of the gaunt man. "The things are full of big spiders! Look, my lord!"

The man with the silver bridle still followed the mass that drove away.

"Look, my lord!"

The master found himself staring down at a red smashed thing on the ground that, in spite of partial obliteration, could still wriggle unavailing legs. Then when the gaunt man pointed to another mass that bore down upon them, he drew his sword hastily. Up the valley now it was like a fog bank torn to rags. He tried to grasp the situation.

"Ride for it!" the little man was shouting. "Ride for it down the valley."

What happened then was like the confusion of a battle.

The man with the silver bridle saw the little man go past him slashing furiously at imaginary cobwebs, saw him cannon into the horse of the gaunt man and hurl it and his rider to earth. His own horse went a dozen paces before he could rein it in. Then he looked up to avoid imaginary dangers, and then back again to see a horse rolling on the ground, the gaunt man standing and slashing over it at a rent and fluttering mass of grey that streamed and wrapped about them both. And thick and fast as thistledown on waste land on a windy day in July, the cobweb masses were coming on.

The little man had dismounted, but he dared not release his horse. He was endeavouring to lug the struggling brute back with the strength of one arm, while with the other he slashed aimlessly. The tentacles of a second grey mass had entangled themselves with the struggle, and this second grey mass came to its moorings, and slowly sank.

The master set his teeth, gripped his bridle, lowered his head, and spurred his horse forward. The horse on the ground rolled over, there was blood and moving shapes upon the flanks, and the gaunt man suddenly leaving it, ran forward towards his master, perhaps ten paces. His legs were swathed and encumbered with grey; he made ineffectual movements with his sword. Grey streamers waved from him; there was a thin veil of grey across his face. With his left hand he beat at something on his body, and suddenly he stumbled and fell. He struggled to rise, and fell again, and suddenly, horribly, began to howl, "Oh—ohoo, ohoo!"

The master could see the great spiders upon him, and others upon the ground.

As he strove to force his horse nearer to this gesticulating, screaming grey object that struggled up and down, there came a clatter of hoofs, and the little man, in act of mounting, swordless, balanced on his belly athwart the white horse, and clutching its mane, whirled past. And again a clinging thread of grey gossamer swept across the master's face. All about him, and over him, it seemed this drifting, noiseless cobweb circled and drew nearer him. . . .

To the day of his death he never knew just how the event of that moment happened. Did he, indeed, turn his horse, or did it really of its own accord stampede after its fellow? Suffice it that in another second he was galloping full tilt down the valley with his sword whirling furiously overhead. And all about him on the quickening breeze, the spiders' air-ships, their air bundles and air sheets, seemed to him to hurry in a conscious pursuit.

Clatter, clatter, thud, thud—the man with the silver bridle rode, heedless of his direction, with his fearful face looking up now right, now left, and his sword arm ready to slash. And a few hundred yards ahead of him, with a tail of torn cobweb trailing behind him, rode the little man on the white horse, still

but imperfectly in the saddle. The reeds bent before them, the wind blew fresh and strong, over his shoulder the master could see the webs hurrying to overtake. . . .

He was so intent to escape the spiders' webs that only as his horse gathered together for a leap did he realise the ravine ahead. And then he realised it only to misunderstand and interfere. He was leaning forward on his horse's neck and sat up and back all too late.

But if in his excitement he had failed to leap, at any rate he had not forgotten how to fall. He was horseman again in mid-air. He came off clear with a mere bruise upon his shoulder, and his horse rolled, kicking spasmodic legs, and lay still. But the master's sword drove its point into the hard soil, and snapped clean across, as though Chance refused him any longer as her Knight, and the splintered end missed his face by an inch or so.

He was on his feet in a moment, breathlessly scanning the onrushing spider-webs. For a moment he was minded to run, and then thought of the ravine, and turned back. He ran aside once to dodge one drifting terror, and then he was swiftly clambering down the precipitous sides, and out of the touch of the gale.

There under the lee of the dry torrent's steeper banks he might crouch, and watch these strange, grey masses pass and pass in safety till the wind fell, and it became possible to escape. And there for a long time he crouched, watching the strange, grey, ragged masses trail their streamers across his narrowed sky.

Once a stray spider fell into the ravine close beside him—a full foot it measured from leg to leg, and its body was half a man's hand—and after he had watched its monstrous alacrity of search and escape for a little while, and tempted it to bite his broken sword, he lifted up his iron heeled boot and smashed it into a pulp. He swore as he did so, and for a time sought it up and down for another.

Then presently, when he was surer these spider swarms could not drop into the ravine, he found a place where he could sit down, and sat and fell into deep thought and began after his manner to gnaw his knuckles and bite his nails. And from this he was moved by the coming of the man with the white horse.

He heard him long before he saw him, as a clattering of hoofs, stumbling footsteps, and a reassuring voice. Then the little man appeared, a rueful figure, still with a tail of white cobweb trailing behind him. They approached each other without speaking, without a salutation. The little man was fatigued, and shamed to the pitch of hopeless bitterness, and came to a stop at last, face to face with his seated master. The latter winced a little under his dependant's eye. "Well?" he said at last, with no pretence of authority.

"You left him?"

"My horse bolted."

"I know. So did mine."

He laughed at his master mirthlessly.

"I say my horse bolted," said the man who once had a silver-studded bridle.

"Cowards both," said the little man.

The other gnawed his knuckle through some meditative moments, with his eye on his inferior.

"Don't call me a coward," he said at length.

"You are a coward like myself."

"A coward possibly. There is a limit beyond which every man must fear. That I have learnt at last. But not like yourself. That is where the difference comes in."

"I never could have dreamt you would have left him. He saved your life two minutes before. . . . Why are you our lord?"

The master gnawed his knuckles again, and his countenance was dark.

"No man calls me a coward," he said. "No. . . . A broken sword is better than none. . . . One spavined white horse cannot be expected to carry two men a four days' journey. I hate white horses, but this time it cannot be helped. You begin to understand me? . . . I perceive that you are minded, on the strength of what you have seen and fancy, to taint my reputation. It is men of your sort who unmake kings. Besides which—I never liked you."

"My lord!" said the little man.

"No," said the master. "No!"

He stood up sharply as the little man moved. For a minute perhaps they faced one another. Overhead the spiders' balls went driving. There was a quick movement among the pebbles, a running of feet, a cry of despair, a gasp, and a blow. . . .

Towards nightfall the wind fell. The sun set in a calm serenity, and the man who had once possessed the silver bridle came at last very cautiously and by an easy slope out of the ravine again; but now he led the white horse that once belonged to the little man. He would have gone back to his horse to get his silver-mounted bridle again, but he feared night and a quickening breeze might still find him in the valley, and besides he disliked greatly to think he might discover his horse all swathed in cobwebs and perhaps unpleasantly eaten.

And as he thought of those cobwebs and of all the dangers he had been through, and the manner in which he had been preserved that day, his hand sought a little reliquary that hung about his neck, and he clasped it for a moment with heartfelt gratitude. As he did so his eyes went across the valley

"I was hot with passion," he said, "and now she has met her reward. They also, no doubt——"

And behold! Far away out of the wooded slopes across the valley, but in the clearness of the sunset distinct and unmistakable, he saw a little spire of smoke.

At that his expression of serene resignation changed to an amazed anger. Smoke? He turned the head of the white horse about, and hesitated. And as he did so a little rustle of air went through the grass about him. Far away upon some reeds swayed a tattered sheet of grey. He looked at the cobwebs; he looked at the smoke.

"Perhaps, after all, it is not them," he said at last.

But he knew better.

After he had stared at the smoke for some time, he mounted the white horse.

As he rode, he picked his way amidst stranded masses of web. For some reason there were many dead spiders on the ground, and those that lived feasted guiltily on their fellows. At the sound of his horse's hoofs they fled.

Their time had passed. From the ground, without either a wind to carry them or a winding sheet ready, these things, for all their poison, could do him no evil.

He flicked with his belt at those he fancied came too near. Once, where a number ran together over a bare place, he was minded to dismount and trample them with his boots, but this impulse he overcame. Ever and again he turned in his saddle, and looked back at the smoke.

"Spiders," he muttered over and over again. "Spiders! Well, well. . . . The next time I must spin a web."

STORY FORTY-ONE

THE TRUTH ABOUT PYECRAFT

HE sits not a dozen yards away. If I glance over my shoulder I can see him. And if I catch his eye—and usually I catch his eye—it meets me with an expression—

It is mainly an imploring look—and yet with suspicion in it. Confound his suspicion! If I wanted to tell on him I should have told long ago. I don't tell and I don't tell, and he ought to feel at his ease. As if anything so gross and fat as he could feel at ease! Who would believe me if I did tell?

Poor old Pyecraft! Great, uneasy jelly of substance! The fattest clubman in London.

He sits at one of the little club tables in the huge bay by the fire, stuffing. What is he stuffing? I glance judiciously and catch him biting at a round of hot buttered tea-cake, with his eyes on me. Confound him!—with his eyes on me!

That settles it, Pyecraft! Since you *will* be abject, since you *will* behave as though I was not a man of honour, here, right under your embedded eyes, I write the thing down—the plain truth about Pyecraft. The man I helped, the man I shielded, and who has requited me by making my club unendurable, absolutely unendurable, with his liquid appeal, with the perpetual “don't tell” of his looks.

And, besides, why does he keep on eternally eating?

Well, here goes for the truth, the whole truth, and nothing but the truth!

Pyecraft— I made the acquaintance of Pyecraft in this very smoking-room. I was a young, nervous new member, and he saw it. I was sitting all alone, wishing I knew more of the members, and suddenly he came, a great rolling front of chins and abdomina, towards me, and grunted and sat down in a chair close by me and wheezed for a space, and scraped for a space with a match and lit a cigar, and then addressed me. I forget what he said—something about the matches not lighting properly, and afterwards as he talked he kept stopping the waiters one by one as they went by, and telling them about the matches in that thin, fluty voice he has. But, anyhow, it was in some such way we began our talking.

He talked about various things and came round to games. And thence to my figure and complexion. “You ought to be a good cricketer,” he said. I suppose I am slender, slender to what some people would call lean, and I suppose I am rather dark, still— I am not ashamed of having a Hindu great-grandmother, but, for all that, I don't want casual strangers to see through me at a glance to *her*. So that I was set against Pyecraft from the beginning.

But he only talked about me in order to get to himself.

"I expect," he said, "you take no more exercise than I do, and probably you eat no less." (Like all excessively obese people he fancied he ate nothing.) "Yet"—and he smiled an oblique smile—"we differ."

And then he began to talk about his fatness and his fatness; all he did for his fatness and all he was going to do for his fatness; what people had advised him to do for his fatness and what he had heard of people doing for fatness similar to his. "*A priori*," he said, "one would think a question of nutrition could be answered by dietary and a question of assimilation by drugs." It was stifling. It was dumpling talk. It made me feel swelled to hear him.

One stands that sort of thing once in a way at a club, but a time came when I fancied I was standing too much. He took to me altogether too conspicuously. I could never go into the smoking-room but he would come wallowing towards me, and sometimes he came and gormandised round and about me while I had my lunch. He seemed at times almost to be clinging to me. He was a bore, but not so fearful a bore as to be limited to me; and from the first there was something in his manner—almost as though he knew, almost as though he penetrated to the fact that I *might*—that there was a remote, exceptional chance in me that no one else presented.

"I'd give anything to get it down," he would say—"anything," and peer at me over his vast cheeks and pant.

Poor old Pyecraft! He has just gonged, no doubt to order another buttered tea-cake!

He came to the actual thing one day. "Our Pharmacopœia," he said, "our Western Pharmacopœia is anything but the last word of medical science. In the East, I've been told——"

He stopped and stared at me. It was like being at an aquarium.

I was quite suddenly angry with him. "Look here," I said, "who told you about my great-grandmother's recipes?"

"Well," he fenced.

"Every time we've met for a week," I said—"and we've met pretty often—you've given me a broad hint or so about that little secret of mine."

"Well," he said, "now the cat's out of the bag, I'll admit, yes, it is so. I had it——"

"From Pattison?"

"Indirectly," he said, which I believe was lying, "yes."

"Pattison," I said, "took that stuff at his own risk."

He pursed his mouth and bowed.

"My great-grandmother's recipes," I said, "are queer things to handle. My father was near making me promise——"

"He didn't?"

"No. But he warned me. He himself used one—once."

"Ah! . . . But do you^f think——? Suppose—suppose there did happen to be one——"

"The things are curious documents," I said. "Even the smell of 'em. . . . No!"

But after going so far Pyecraft was resolved I should go farther. I was always a little afraid if I tried his patience too much he would fall on me suddenly and smother me. I own I was weak. But I was also annoyed with Pyecraft. I had got to that state of feeling for him that disposed me to say, "Well, take the risk!" The little affair of Pattison to which I have alluded was a different matter altogether. What it was doesn't concern us now, but I knew, anyhow, that the particular recipe I used then was safe. The rest I didn't know so much about, and, on the whole, I was inclined to doubt their safety pretty completely.

Yet even if Pyecraft got poisoned——

I must confess the poisoning of Pyecraft struck me as an immense undertaking.

That evening I took that queer, odd-scented sandalwood box out of my safe and turned the rustling skins over. The gentleman who wrote the recipes for my great-grandmother evidently had a weakness for skins of a miscellaneous origin, and his handwriting was cramped to the last degree. Some of the things are quite unreadable to me—though my family, with its Indian Civil Service associations, has kept up a knowledge of Hindustani from generation to generation—and none are absolutely plain sailing. But I found the one that I knew was there soon enough, and sat on the floor by my safe for some time looking at it.

"Look here," said I to Pyecraft next day, and snatched the slip away from his eager grasp.

"So far as I can make it out, this is a recipe for Loss of Weight. ("Ah!" said Pyecraft.) I'm not absolutely sure, but I think it's that. And if you take my advice you'll leave it alone. Because, you know—I blacken my blood in your interest, Pyecraft—my ancestors on that side were, so far as I can gather, a jolly queer lot. See?"

"Let me try it," said Pyecraft.

I leant back in my chair. My imagination made one mighty effort and fell flat within me. "What in Heaven's name, Pyecraft," I asked, "do you think you'll look like when you get thin?"

He was impervious to reason. I made him promise never to say a word to me about his disgusting fatness again whatever happened—never, and then I handed him that little piece of skin.

"It's nasty stuff," I said.

"No matter," he said, and took it.

He goggled at it. "But—but——" he said.

He had just discovered that it wasn't English.

"To the best of my ability," I said, "I will do you a translation."

I did my best. After that we didn't speak for a fortnight. Whenever he approached me I frowned and motioned him away, and he respected our compact, but at the end of the fortnight he was as fat as ever. And then he got a word in.

"I must speak," he said. "It isn't fair. There's something wrong. It's done me no good. You're not doing your great-grandmother justice."

"Where's the recipe?"

He produced it gingerly from his pocket-book.

I ran my eye over the items. "Was the egg addled?" I asked.

"No. Ought it to have been?"

"That," I said, "goes without saying in all my poor dear great-grandmother's recipes. When condition or quality is not specified you must get the worst. She was drastic or nothing. . . . And there's one or two possible alternatives to some of these other things. You got *fresh* rattlesnake venom?"

"I got a rattlesnake from Jamrach's. It cost—it cost——"

"That's your affair, anyhow. This last item——"

"I know a man who——"

"Yes. H'm. Well, I'll write the alternatives down. So far as I know the language, the spelling of this recipe is particularly atrocious. By the bye, dog here probably means pariah dog."

For a month after that I saw Pyecraft constantly at the club and as fat and anxious as ever. He kept our treaty, but at times he broke the spirit of it by shaking his head despondently. Then one day in the cloakroom he said, "Your great-grandmother——"

"Not a word against her," I said; and he held his peace.

I could have fancied he had desisted, and I saw him one day talking to three new members about his fatness as though he was in search of other recipes. And then, quite unexpectedly, his telegram came.

"Mr. Formalyn!" bawled a page-boy under my nose, and I took the telegram and opened it at once.

"*For Heaven's sake come.—Pyecraft.*"

"H'm," said I, and to tell the truth I was so pleased at the rehabilitation of my great-grandmother's reputation this evidently promised that I made a most excellent lunch.

I got Pyecraft's address from the hall porter. Pyecraft inhabited the upper half of a house in Bloomsbury, and I went there so soon as I had done my coffee and Trappistine. I did not wait to finish my cigar.

"Mr. Pyecraft?" said I, at the front door.

They believed he was ill; he hadn't been out for two days.

"He expects me," said I, and they sent me up.

I rang the bell at the lattice-door upon the landing.

"He shouldn't have tried it, anyhow," I said to myself. "A man who eats like a pig ought to look like a pig."

An obviously worthy woman, with an anxious face and a carelessly placed cap, came and surveyed me through the lattice.

I gave my name and she opened his door for me in a dubious fashion.

"Well?" said I, as we stood together inside Pyecraft's piece of the landing.

"'E said you was to come in if you came," she said, and regarded me, making no motion to show me anywhere. And then, confidentially, "'E's locked in, sir."

"Locked in?"

"Locked himself in yesterday morning and 'asn't let any one in since, sir. And ever and again *swearing*. Oh, my!"

I stared at the door she indicated by her glances. "In there?" I said.

"Yes, sir."

"What's up?"

She shook her head sadly. "'E keeps on calling for vittles, sir. 'Eavy vittles 'e wants. I get 'im what I can. Pork 'e's 'ad, soot puddin', sossiges, noo bread. Everythink like that. Left outside, if you please, and me go away. 'E's eatin', sir, somethink *awful*."

There came a piping bawl from inside the door: "That Formalyn?"

"That you, Pyecraft?" I shouted, and went and banged the door.

"Tell her to go away."

I did.

Then I could hear a curious pattering upon the door, almost like some one feeling for the handle in the dark, and Pyecraft's familiar grunts.

"It's all right," I said, "she's gone."

But for a long time the door didn't open.

I heard the key turn. Then Pyecraft's voice said, "Come in."

I turned the handle and opened the door. Naturally I expected to see Pyecraft.

Well, you know, he wasn't there!

I never had such a shock in my life. There was his sitting-room in a state of untidy disorder, plates and dishes among the books and writing things, and several chairs overturned, but Pyecraft—

"It's all right, o' man; shut the door," he said, and then I discovered him.

There he was right up close to the cornice in the corner by the door, as though some one had glued him to the ceiling. His face was anxious and angry. He panted and gesticulated.

"Shut the door," he said. "If that woman gets hold of it——"

I shut the door, and went and stood away from him and stared.

"If anything gives way and you tumble down," I said, "you'll break your neck, Pyecraft."

"I wish I could," he wheezed.

"A man of your age and weight getting up to kirdish gymnastics——"

"Don't," he said, and looked agonised. "Your damned great-grandmother——"

"Be careful," I warned him.

"I'll tell you," he said, and gesticulated.

"How the deuce," said I, "are you holding on up there?"

And then abruptly I realised that he was not holding on at all, that he was floating up there—just as a gas-filled bladder might have floated in the same position. He began a struggle to thrust himself away from the ceiling and to clamber down the wall to me. It's that prescription," he panted, as he did so. "Your great-gran——"

"No!" I cried.

He took hold of a framed engraving rather carelessly as he spoke and it gave way, and he flew back to the ceiling again, while the picture smashed on to the sofa. Bump he went against the ceiling, and I knew then why he was all over white on the more salient curves and angles of his person. He tried again more carefully, coming down by way of the mantel.

It was really a most extraordinary spectacle, that great, fat, apoplectic-looking man upside down and trying to get from the ceiling to the floor. "That prescription," he said. "Too successful."

"How?"

"Loss of weight—almost complete."

And then, of course, I understood.

"By Jove, Pyecraft," said I, "what you wanted was a cure for fatness! But you always called it weight. You would call it weight."

Somehow I was extremely delighted. I quite liked Pyecraft for the time. "Let me help you!" I said, and took his hand and pulled him down. He kicked about, trying to get foothold somewhere. It was very like holding a flag on a windy day.

"That table," he said, pointing, "is solid mahogany and very heavy. If you can put me under that——"

I did, and there he wallowed about like a captive balloon, while I stood on his hearthrug and talked to him.

I lit a cigar. "Tell me," I said, "what happened?"

"I took it," he said.

"How did it taste?"

"Oh, *beastly*!"

I should fancy they all did. Whether one regards the

ingredients or the probable compound or the possible results, almost all my great-grandmother's remedies appear to me at least to be extraordinarily uninviting. For my own part—

"I took a little sip first."

"Yes?"

"And as I felt lighter and better after an hour, I decided to take the draught."

"My dear Pyecraft!"

"I held my nose," he explained. "And then I kept on getting lighter and lighter—and helpless, you know."

He gave way suddenly to a burst of passion. "What the goodness am I to do?" he said.

"There's one thing pretty evident," I said, "that you mustn't do. If you go out of doors you'll go up and up." I waved an arm upward. "They'd have to send Santos-Dumont after you to bring you down again."

"I suppose it will wear off?"

I shook my head. "I don't think you can count on that," I said.

And then there was another burst of passion, and he kicked out at adjacent chairs and banged the floor. He behaved just as I should have expected a great, fat, self-indulgent man to behave under trying circumstances—that is to say, very badly. He spoke of me and of my great-grandmother with an utter want of discretion.

"I never asked you to take the stuff," I said.

And generously disregarding the insults he was putting upon me, I sat down in his armchair and began to talk to him in a sober, friendly fashion.

I pointed out to him that this was a trouble he had brought upon himself, and that it had almost an air of poetical justice. He had eaten too much. This he disputed, and for a time we argued the point.

He became noisy and violent, so I desisted from this aspect of his lesson. "And then," said I, "you committed the sin of euphuism. You called it, not Fat, which is just and inglorious, but Weight. You——"

He interrupted to say that he recognised all that. What was he to do?

I suggested he should adapt himself to his new conditions. So we came to the really sensible part of the business. I suggested that it would not be difficult for him to learn to walk about on the ceiling with his hands——

"I can't sleep," he said.

But that was no great difficulty. It was quite possible, I pointed out, to make a shake-up under a wire mattress, fasten the under things on with tapes, and have a blanket, sheet, and coverlet to button at the side. He would have to confide in his housekeeper, I said; and after some squabbling he agreed to that. (Afterwards it was quite delightful to see the

beautifully matter-of-fact way) with which the good lady took all these amazing inversions.) He could have a library ladder in his room, and all his meals could be laid on the top of his bookcase. We also hit on an ingenious device by which he could get to the floor whenever he wanted, which was simply to put the *British Encyclopædia* (tenth edition) on the top of his open shelves. He just pulled out a couple of volumes and held on, and down he came. And we agreed there must be iron staples along the skirting, so that he could cling to those whenever he wanted to get about the room on the lower level.

As we got on with the thing I found myself almost keenly interested. It was I who called in the housekeeper and broke matters to her, and it was I chiefly who fixed up the inverted bed. In fact, I spent two whole days at his flat. I am a handy, interfering sort of man with a screwdriver, and I made all sorts of ingenious adaptations for him—ran a wire to bring his bells within reach, turned all his electric lights up instead of down, and so on. The whole affair was extremely curious and interesting to me, and it was delightful to think of Pyecraft like some great, fat blow-fly, crawling about on his ceiling and clambering round the lintel of his doors from one room to another, and never, never, never coming to the club any more. . . .

Then, you know, my fatal ingenuity got the better of me. I was sitting by his fire drinking his whisky, and he was up in his favourite corner by the cornice, tacking a Turkey carpet to the ceiling, when the idea struck me. "By Jove, Pyecraft!" I said, "all this is totally unnecessary."

And before I could calculate the complete consequences of my notion I blurted it out. "Lead underclothing," said I, and the mischief was done.

Pyecraft received the thing almost in tears. "To be right ways up again——" he said.

I gave him the whole secret before I saw where it would take me. "Buy sheet lead," I said, "stamp it into discs. Sew 'em all over your underclothes until you have enough. Have lead-soled boots, carry a bag of solid lead, and the thing is done! Instead of being a prisoner here you may go abroad again, Pyecraft; you may travel——"

A still happier idea came to me. "You need never fear a shipwreck. All you need do is just slip off some or all of your clothes, take the necessary amount of luggage in your hand, and float up in the air——"

In his emotion he dropped the tack-hammer within an ace of my head. "By Jove!" he said, "I shall be able to come back to the club again."

The thing pulled me up short. "By Jove!" I said, faintly. "Yes. Of course—you will."

He did. He does. There he sits behind me now, stuffing—as I live!—a third go of buttered tea-cake. And no one in

the whole world knows—except his housekeeper and me—that he weighs practically nothing; that he is a mere boring mass of assimilatory matter, mere clouds in clothing, *niente*, *nefas*, the most inconsiderable of men. There he sits watching until I have done this writing. • Then, if he can, he will waylay me. He will come billowing up to me. . . .

He will tell me over again all about it, how it feels, how it doesn't feel, how he sometimes hopes it is passing off a little. And always somewhere in that fat, abundant discourse he will say, "The secret's keeping, eh? If any one knew of it—I should be so ashamed. . . . Makes a fellow look such a fool, you know. Crawling about on a ceiling and all that. . . ."

And now to elude Pycraft, occupying, as he does, an admirable strategic position between me and the door.

STORY FORTY-TWO

MR. SKELMERSDALE IN FAIRYLAND

"THERE'S a man in that shop," said the Doctor, "who has been in Fairyland."

"Nonsense!" I said, and stared back at the shop. It was the usual village shop, post-office, telegraph wire on its brow, zinc pans and brushes outside, boots, shirtings, and potted meats in the window. "Tell me about it," I said, after a pause.

"I don't know," said the Doctor. "He's an ordinary sort of lout—Skelmersdale is his name. But everybody about here believes it like Bible truth."

I reverted presently to the topic.

"I know nothing about it," said the Doctor, "and I don't want to know. I attended him for a broken finger—Married and Single cricket match—and that's when I struck the nonsense. That's all. But it shows you the sort of stuff I have to deal with, anyhow, eh? Nice to get modern sanitary ideas into a people like this!"

"Very," I said in a mildly sympathetic tone, and he went on to tell me about that business of the Bonham drain. Things of that kind, I observe, are apt to weigh on the minds of Medical Officers of Health. I was as sympathetic as I knew how, and when he called the Bonham people "asses," I said they were "thundering asses," but even that did not allay him.

Afterwards, later in the summer, an urgent desire to seclude myself, while finishing my chapter on Spiritual Pathology—it was really, I believe, stiffer to write than it is to read—took me to Bignor. I lodged at a farmhouse, and presently found myself outside that little general shop again, in search of tobacco. "Skelmersdale," said I to myself at the sight of it, and went in.

I was served by a short, but shapely, young man, with a fair downy complexion, good small teeth, blue eyes, and a languid manner. I scrutinised him curiously. Except for a touch of melancholy in his expression, he was nothing out of the common. He was in the shirt-sleeves and tucked-up apron of his trade, and a pencil was thrust behind his inoffensive ear. Athwart his black waistcoat was a gold chain, from which dangled a bent guinea.

"Nothing more to-day, sir?" he inquired. He leant forward over my bill as he spoke.

"Are you Mr. Skelmersdale?" said I.

"I am, sir," he said, without looking up.

"Is it true that you have been in Fairyland?"

He looked up at me for a moment with wrinkled brows, with an aggrieved, exasperated face. "O shut it!" he said, and,

after a moment of hostility, eye to eye, he went on adding up my bill. "Four, six and a half," he said, after a pause. "Thank you, sir."

So, unpropitiously, my acquaintance with Mr. Skelmersdale began.

Well, I got from that to confidence—through a series of toilsome efforts. I picked him up again in the Village Room, where of a night I went to play billiards after my supper, and mitigate the extreme seclusion from my kind that was so helpful to work during the day. I contrived to play with him and afterwards to talk with him. I found the one subject to avoid was Fairyland. On everything else he was open and amiable in a commonplace sort of way, but on that he had been worried—it was a manifest taboo. Only once in the room did I hear the slightest allusion to his experience in his presence, and that was by a cross-grained farm hand who was losing to him. Skelmersdale had run a break into double figures, which, by the Bignor standards, was uncommonly good play. "Steady on!" said his adversary. "None of your fairy flukes!"

Skelmersdale stared at him for a moment, cue in hand, then flung it down and walked out of the room.

"Why can't you leave 'im alone?" said a respectable elder who had been enjoying the game, and in the general murmur of disapproval, the grin of satisfied wit faded from the plough-boy's face.

I scented my opportunity. "What's this joke?" said I, "about Fairyland?"

"Taint no joke about Fairyland, not to young Skelmersdale," said the respectable elder, drinking.

A little man with rosy cheeks was more communicative. "They *do* say, sir," he said, "that they took him into Aldington Knoll an' kep' him there a matter of three weeks."

And with that the gathering was well under weigh. Once one sheep had started, others were ready enough to follow, and in a little time I had at least the exterior aspect of the Skelmersdale affair. Formerly, before he came to Bignor, he had been in that very similar little shop at Aldington Corner, and there whatever it was did happen had taken place. The story was clear that he had stayed out late one night on the Knoll and vanished for three weeks from the sight of men, and had returned with "his cuffs as clean as when he started," and his pockets full of dust and ashes. He returned in a state of moody wretchedness that only slowly passed away, and for many days he would give no account of where it was he had been. The girl he was engaged to at Clapton Hill tried to get it out of him, and threw him over partly because he refused, and partly because, as she said, he fairly gave her the "ump." And then when, some time after, he let out to some one carelessly that he had been in Fairyland and wanted to go back, and when the thing spread and the simple badinage of the

country-side came into play, he threw up his situation abruptly, and came to Bignor to get out of the fuss. But as to what had happened in Fairyland none of these people knew. There the gathering in the Village Room went to pieces like a pack at fault. One said this, and another said that.

Their air in dealing with this marvel was ostensibly critical and sceptical, but I could see a considerable amount of belief showing through their guarded qualifications. I took a line of intelligent interest, tinged with a reasonable doubt of the whole story.

"If Fairyland's inside Aldington Knoll," I said, "why don't you dig it out?"

"That's what I says," said the young ploughboy.

"There's a-many have tried to dig on Aldington Knoll," said the respectable elder, solemnly, "one time and another. But there's none as goes about to-day to tell what they got by digging."

The unanimity of vague belief that surrounded me was rather impressive; I felt there must surely be *something* at the root of so much conviction, and the already pretty keen curiosity I felt about the real facts of the case was distinctly whetted. If these real facts were to be got from any one, they were to be got from Skelmersdale himself; and I set myself, therefore, still more assiduously to efface the first bad impression I had made and win his confidence to the pitch of voluntary speech. In that endeavour I had a social advantage. Being a person of affability and no apparent employment, and wearing tweeds and knickerbockers, I was naturally classed as an artist in Bignor, and in the remarkable code of social precedence prevalent in Bignor an artist ranks considerably higher than a grocer's assistant. Skelmersdale, like too many of his class, is something of a snob; he had told me to "shut it" only under sudden, excessive provocation, and with, I am certain, a subsequent repentance; he was, I knew, quite glad to be seen walking about the village with me. In due course he accepted the proposal of a pipe and whisky in my rooms readily enough, and there, scenting by some happy instinct that there was trouble of the heart in this, and knowing that confidences beget confidences, I plied him with much of interest and suggestion from my real and fictitious past. And it was after the third whisky of the third visit of that sort, if I remember rightly, *à propos* of some artless expansion of a little affair that had touched and left me in my teens, that he did at last, of his own free will and motion, break the ice. "It was like that with me," he said, "over there at Aldington. It's just that that's so rum. First I didn't care a bit and it was all her, and afterwards, when it was too late, it was, in a manner of speaking, all me."

I forebore to jump upon this allusion, and so he presently threw out another, and in a little while he was making it as

plain as daylight that the one thing he wanted to talk about now was this Fairyland adventure he had sat tight upon for so long. You see, I'd done the trick with him, and from being just another half-incredulous, would-be facetious stranger, I had, by all my wealth of shameless self-exposure, become the possible confidant. He had been bitten by the desire to show that he, too, had lived and felt many things, and the fever was upon him.

He was certainly confoundedly allusive at first, and my eagerness to clear him up with a few precise questions was only equalled and controlled by my anxiety not to get to this sort of thing too soon. But in another meeting or so the basis of confidence was complete; and from first to last I think I got most of the items and aspects—indeed, I got quite a number of times over almost everything that Mr. Skelmersdale, with his very limited powers of narration, will ever be able to tell. And so I come to the story of his adventure, and I piece it all together again. Whether it really happened, whether he imagined it or dreamt it, or fell upon it in some strange hallucinatory trance, I do not profess to say. But that he invented it I will not for one moment entertain. The man simply and honestly believes the thing happened as he says it happened; he is transparently incapable of any lie so elaborate and sustained, and in the belief of the simple, yet often keenly penetrating, rustic minds about him I find a very strong confirmation of his sincerity. He believes—and nobody can produce any positive fact to falsify his belief. As for me, with this much of endorsement, I transmit his story—I am a little old now to justify or explain.

He says he went to sleep on Aldington Knoll about ten o'clock one night—it was quite possibly Midsummer Night, though he has never thought of the date, and he cannot be sure within a week or so—and it was a fine night and windless, with a rising moon. I have been at the pains to visit this Knoll thrice since his story grew up under my persuasions, and once I went there in the twilight summer moonrise on what was, perhaps, a similar night to that of his adventure. Jupiter was great and splendid above the moon, and in the north and north-west the sky was green and vividly bright over the sunken sun. The Knoll stands out bare and bleak under the sky, but surrounded at a little distance by dark thickets, and as I went up towards it there was a mighty starting and scampering of ghostly or quite invisible rabbits. Just over the crown of the Knoll, but nowhere else, was a multitudinous thin trumpeting of midges. The Knoll is, I believe, an artificial mound, the tumulus of some great prehistoric chieftain, and surely no man ever chose a more spacious prospect for a sepulchre. Eastward one sees along the hills to Hythe, and thence across the Channel to where, thirty miles and more, perhaps, away, the great white lights by Gris Nez and Boulogne

wink and pass and shine. Westward lies the whole tumbled valley of the Weald, visible as far as Hindhead and Leith Hill, and the valley of the Stour opens the Downs in the north to interminable hills beyond Wye. All Romney Marsh lies southward at one's feet, Dymchurch and Romney and Lydd, Hastings and its hill are in the middle distance, and the hills multiply vaguely far beyond where Eastbourne rolls up to Beachy Head.

And out upon all this it was that Skelmersdale wandered, being troubled in his earlier love affair, and as he says, "not caring *where* he went." And there he sat down to think it over, and so, sulking and grieving, was overtaken by sleep. And so he fell into the fairies' power.

The quarrel that had upset him was some trivial matter enough between himself and the girl at Clapton Hill to whom he was engaged. She was a farmer's daughter, said Skelmersdale, and "very respectable," and no doubt an excellent match for him; but both girl and lover were very young and with just that mutual jealousy, that intolerantly keen edge of criticism, that irrational hunger for a beautiful perfection, that life and wisdom do presently and most mercifully dull. What the precise matter of quarrel was I have no idea. She may have said she liked men in gaiters when he hadn't any gaiters on, or he may have said he liked her better in a different sort of hat, but however it began, it got by a series of clumsy stages to bitterness and tears. She no doubt got tearful and smeary, and he grew dusty and drooping, and she parted with invidious comparisons, grave doubts whether she ever had *really* cared for him, and a clear certainty she would never care again. And with this sort of thing upon his mind he came out upon Aldington Knoll grieving, and presently, after a long interval, perhaps, quite inexplicably fell asleep.

He woke to find himself on a softer turf than ever he had slept on before, and under the shade of very dark trees that completely hid the sky. Always, indeed, in Fairyland the sky is hidden, it seems. Except for one night when the fairies were dancing, Mr. Skelmersdale, during all his time with them, never saw a star. And of that night I am in doubt whether he was in Fairyland proper or out where the rings and rushes are, in those low meadows near the railway line at Smeeth.

But it was light under these trees for all that, and on the leaves and amidst the turf shone a multitude of glow-worms, very bright and fine. Mr. Skelmersdale's first impression was that he was *small*, and the next that quite a number of people still smaller were standing all about him. For some reason, he says, he was neither surprised nor frightened, but sat up quite deliberately and rubbed the sleep out of his eyes. And there all about him stood the smiling elves who had caught him sleeping under their privileges and had brought him into Fairyland.

What these elves were like I have failed to gather, so vague

and imperfect is his vocabulary, and so unobservant of all minor detail does he seem to have been. They were clothed in something very light and beautiful, that was neither wool, nor silk, nor leaves, nor the petals of flowers. They stood all about him as he sat and walked, and down the glade towards him, down a glow-worm avenue and fronted by a star, came at once that Fairy Lady who is the chief personage of his memory and tale. Of her I gathered more. She was clothed in filmy green, and about her little waist was a broad silver girdle. Her hair waved back from her forehead on either side; there were curls not too wayward and yet astray, and on her brow was a little tiara, set with a single star. Her sleeves were some sort of open sleeves, that gave little glimpses of her arms; her throat, I think, was a little displayed, because he speaks of the beauty of her neck and chin. There was a necklace of coral about her white throat, and in her breast a coral-coloured flower. She had the soft lines of a little child in her chin and cheeks and throat. And her eyes, I gather, were of a kindled brown, very soft and straight and sweet under her level brows. You see by these particulars how greatly this lady must have loomed in Mr. Skelmersdale's picture. Certain things he tried to express and could not express; "the way she moved," he said several times; and I fancy a sort of demure joyousness radiated from this Lady.

And it was in the company of this delightful person, as the guest and chosen companion of this delightful person, that Mr. Skelmersdale set out to be taken into the intimacies of Fairyland. She welcomed him gladly and a little warmly—I suspect a pressure of his hand in both of hers and a lit face to his. After all, ten years ago young Skelmersdale may have been a very comely youth. And once she took his arm, and once, I think, she led him by the hand adown the glade that the glow-worms lit.

Just how things chanced and happened there is no telling from Mr. Skelmersdale's disarticulated skeleton of description. He gives little unsatisfactory glimpses of strange corners and doings, of places where there were many fairies together, of "toadstool things that shone pink," of fairy food, of which he could only say "you should have tasted it!" and of fairy music, "like a little musical box," that came out of nodding flowers. There was a great open place where fairies rode and raced on "things," but what Mr. Skelmersdale meant by "these here things they rode," there is no telling. Larvæ, perhaps, or crickets, or the little beetles that elude us so abundantly. There was a place where water splashed and gigantic king-cups grew, and there in the hotter times the fairies bathed together. There were games being played and dancing and much elvish love-making, too, I think, among the moss branch thickets. There can be no doubt that the Fairy Lady made love to Mr. Skelmersdale, and no doubt either that this young

man set himself to resist her. 'A time came, indeed, when she sat on a bank beside him, in a quiet secluded place "all smelling of violets," and talked to him of love.

"When her voice went low and she whispered," said Mr. Skelmersdale, "and laid 'er 'and on my 'and, you know, and came close with a soft, warm friendly way she 'ad, it was as much as I could do to keep my 'ead."

It seems he kept his head to a certain limited unfortunate extent. He saw "'ow the wind was blowing," he says, and so, sitting there in a place all smelling of violets, with the touch of this lovely Fairy Lady about him, Mr. Skelmersdale broke it to her gently—that he was engaged!

She had told him she loved him dearly, that he was a sweet human lad for her, and whatever he would ask of her he should have—even his heart's desire.

And Mr. Skelmersdale, who, I fancy, tried hard to avoid looking at her little lips as they just dropped apart and came together, led up to the more intimate question by saying he would like enough capital to start a little shop. He'd just like to feel, he said, he had money enough to do that. I imagine a little surprise in those brown eyes he talked about, but she seemed sympathetic for all that, and she asked him many questions about the little shop, "laughing like" all the time. So he got to the complete statement of his affianced position, and told her all about Millie.

"All?" said I.

"Everything," said Mr. Skelmersdale, "just who she was, and where she lived, and everything about her. I sort of felt I 'ad to all the time, I did."

"'Whatever you want you shall have,' said the Fairy Lady. 'That's as good as done. You *shall* feel you have the money just as you wish. And now, you know—you *must* kiss me.'"

And Mr. Skelmersdale pretended not to hear the latter part of her remark, and said she was very kind. That he really didn't deserve she should be so kind. And——

The Fairy Lady suddenly came quite close to him and whispered "Kiss me!"

"And," said Mr. Skelmersdale, "like a fool, I did."

There are kisses and kisses, I am told, and this must have been quite the other sort from Millie's resonant signals of regard. There was something magic in that kiss; assuredly it marked a turning point. At any rate, this is one of the passages that he thought sufficiently important to describe most at length. I have tried to get it right, I have tried to disentangle it from the hints and gestures through which it came to me, but I have no doubt that it was all different from my telling and far finer and sweeter, in the soft filtered light and the subtly stirring silences of the fairy glades. The Fairy Lady asked him more about Millie, and was she very lovely, and so on—a great many times. As to Millie's loveliness, I conceive

him answering that she was "all right." And then, or on some such occasion, the Fairy Lady told him she had fallen in love with him as he slept in the moonlight, and so he had been brought into Fairyland, and she had thought, not knowing of Millie, that perhaps he might chance to love her. "But now you know you can't," she said, "so you must stop with me just a little while, and then you must go back to Millie." She told him that, and you know Skelmersdale was already in love with her, but the pure inertia of his mind kept him in the way he was going. I imagine him sitting in a sort of stupefaction amidst all these glowing beautiful things, answering about his Millie and the little shop he projected and the need of a horse and cart. . . . And that absurd state of affairs must have gone on for days and days. I see this little lady, hovering about him and trying to amuse him, too dainty to understand his complexity and too tender to let him go. And he, you know, hypnotised as it were by his earthly position, went his way with her hither and thither, blind to everything in Fairyland but this wonderful intimacy that had come to him. It is hard, it is impossible, to give in print the effect of her radiant sweetness shining through the jungle of poor Skelmersdale's rough and broken sentences. To me, at least, she shone clear amidst the muddle of his story like a glow-worm in a tangle of weeds.

There must have been many days of things while all this was happening—and once, I say, they danced under the moonlight in the fairy rings that stud the meadows near Smeeth—but at last it all came to an end. She led him into a great cavernous place, lit by "a red nightlight sort of thing," where there were coffers piled on coffers, and cups and golden boxes, and a great heap of what certainly seemed to all Mr. Skelmersdale's senses—coined gold. There were little gnomes amidst this wealth, who saluted her at her coming, and stood aside. And suddenly she turned on him there with brightly shining eyes.

"And now," she said, "you have been kind to stay with me so long, and it is time I let you go. You must go back to your Millie. You must go back to your Millie, and here—just as I promised you—they will give you gold."

"She choked like," said Mr. Skelmersdale. "At that, I had a sort of feeling—" (he touched his breastbone) "as though I was fainting here. I felt pale, you know, and shivering, and even then—I 'adn't a thing to say."

He paused. "Yes," I said.

The scene was beyond his describing. But I know that she kissed him good-bye.

"And you said nothing?"

"Nothing," he said. "I stood like a stuffed calf. She just looked back once, you know, and stood smiling like and crying—I could see the shine of her eyes—and then she was gone, and there was all these little fellows bustling about me, stuffing my

'ands and my pockets and the back of my collar and everywhere with gold."

And then it was, when the Fairy Lady had vanished, that Mr. Skelmersdale really understood and knew. He suddenly began plucking out the gold they were thrusting upon him, and shouting out at them to prevent their giving him more. "'I don't want yer gold,' I said. 'I 'aven't done yet. I'm not going. I want to speak to that Fairy Lady again.' I started off to go after her and they held me back. Yes, stuck their little 'ands against my middle and shoved me back. They kept giving me more and more gold until it was running all down my trouser legs and dropping out of my 'ands. 'I don't want yer gold,' I says to them, 'I want just to speak to the Fairy Lady again.'"

"And did you?"

"It came to a tussle."

"Before you saw her?"

"I didn't see her. When I got out from them she wasn't anywhere to be seen."

So he ran in search of her out of this red-lit cave, down a long grotto, seeking her, and thence he came out in a great and desolate place athwart which a swarm of will-o'-the-wisps were flying to and fro. And about him elves were dancing in derision, and the little gnomes came out of the cave after him, carrying gold in handfuls and casting it after him, shouting, "Fairy love and fairy gold! Fairy love and fairy gold!"

And when he heard these words, came a great fear that it was all over, and he lifted up his voice and called to her by her name, and suddenly set himself to run down the slope from the mouth of the cavern, through a place of thorns and briers, calling after her very loudly and often. The elves danced about him unheeded, pinching him and pricking him, and the will-o'-the-wisps circled round him and dashed into his face, and the gnomes pursued him shouting and pelting him with fairy gold. As he ran with all this strange rout about him and distracting him, suddenly he was knee-deep in a swamp, and suddenly he was amidst thick twisted roots, and he caught his foot in one and stumbled and fell. . . .

He fell and he rolled over, and in that instant he found himself sprawling upon Aldington Knoll, all lonely under the stars.

He sat up sharply at once, he says, and found he was very stiff and cold, and his clothes were damp with dew. The first pallor of dawn and a chilly wind were coming up together. He could have believed the whole thing a strangely vivid dream until he thrust his hand into his side pocket and found it stuffed with ashes. Then he knew for certain it was fairy gold they had given him. He could feel all their pinches and pricks still, though there was never a bruise upon him. And in that manner, and so suddenly, Mr. Skelmersdale came out of Fairy-

land back into this world of men. Even then he fancied the thing was but the matter of a night until he returned to the shop at Aldington Corner and discovered amidst their astonishment that he had been away three weeks.

"Lor! the trouble I 'ad!" said Mr. Skelmersdale.

"How?"

"Explaining. I suppose you've never had anything like that to explain."

"Never," I said, and he expatiated for a time on the behaviour of this person and that. One name he avoided for a space.

"I expect she seemed changed?"

"Every one was changed. Changed for good. Every one seemed big, you know, and coarse. And their voices seemed loud. Why, the sun, when it rose in the morning, fair hit me in the eye!"

"And Millie?" said I at last.

"I didn't seem to care a bit for seeing Millie," he said.

"And Millie?"

"I didn't want to see Millie."

"And when you did?"

"I came up against her Sunday, coming out of church. 'Where you been?' she said, and I saw there was a row. I didn't care if there was. I seemed to forget about her even while she was there a-talking to me. She was just nothing. I couldn't make out whatever I 'ad seen in 'er ever, or what there could 'ave been. Sometimes when she wasn't about, I did get back a little, but never when she was there. Then it was always the other came up and blotted her out. . . . Anyhow, it didn't break her heart."

"Married?" I asked.

"Married 'er cousin," said Mr. Skelmersdale, and reflected on the pattern of the tablecloth for a space.

When he spoke again it was clear that his former sweetheart had clean vanished from his mind, and that the talk had brought back the Fairy Lady triumphant in his heart. He talked of her—soon he was letting out the oddest things, queer love secrets it would be treachery to repeat. I think, indeed, that was the queerest thing in the whole affair, to hear that neat little grocer man after his story was done, with a glass of whisky beside him and a cigar between his fingers, witnessing, with sorrow still, though now, indeed, with a time-blunted anguish, of the inappeasable hunger of the heart that presently came upon him. "I couldn't eat," he said, "I couldn't sleep. I made mistakes in orders and got mixed with change. There she was day and night, drawing me and drawing me. Oh, I wanted her. Lord! how I wanted her! I was up there, most evenings I was up there on the Knoll, often even when it rained. I used to walk over the Knoll and round it and round it, calling for them to let me in. Shouting. Near blubbering

I was at times. Daft I was and miserable. I kept on saying it was all a mistake. And every Sunday afternoon I went up there, wet and fine, though I knew as well as you do, it wasn't no good by day. And I've tried to go to sleep there."

He stopped sharply and decided to drink some whisky.

"I've tried to go to sleep there," he said, and I could swear his lips trembled. "I've tried to go to sleep there, often and often. And, you know, I couldn't, sir—never. I've thought if I could go to sleep there, there might be something. . . . But I've sat up there and laid up there, and I couldn't—not for thinking and longing. It's the longing. . . . I've tried——"

He blew, drank up the rest of his whisky spasmodically, stood up suddenly and buttoned his jacket, staring closely and critically at the cheap oleographs beside the mantel meanwhile. The little black notebook in which he recorded the orders of his daily round projected stiffly from his breast pocket. When all the buttons were quite done, he patted his chest and turned on me suddenly. "Well," he said, "I must be going."

There was something in his eyes and manner that was too difficult for him to express in words. "One gets talking," he said at last at the door, and smiled wanly, and so vanished from my eyes. And that is the tale of Mr. Skelmersdale in Fairyland just as he told it to me.
